Cry down. Blame; depreciate; decry; prohibit.

I'll to the king,
And from a mouth of honour quite *cry down*
This Ipswich fellow's insolence.
Shakespear, Henry VIII. i. 1.

By all means *cry down* that unworthy course of late times, that they should pay money.—*Bacon, Advice to Villiers.*

Men of dissolute lives *cry down* religion because they would not be under the restraints of it.—*Archbishop Tillotson.*

Cry up.

a. Applaud; exalt; praise.

Instead of *crying up* all things which are brought from beyond sea, let us advance the native commodities of our own kingdom.—*Bacon, Advice to Villiers.*

They slight the strongest arguments that can be brought for religion, and *cry up* very weak ones against it.—*Archbishop Tillotson.*

He may, out of interest, as well as conviction, *cry up* that for sacred, which if once trampled on and profaned, he himself cannot be safe, nor secure.—*Locke.*

b. Raise the price of anything by proclamation.

All the effect that I conceive was made by *crying up* the pieces of eight, was to bring in much more of that species, instead of others current here.—*Sir W. Temple.*

Cry. *s.* [Fr. *cri.*]

1. Lamentation; shriek; scream; clamour; outcry; exclamation of triumph or of any other passion; importunity.

Pray not thou for this people, neither lift up cry nor prayer for them.—*Jeremiah*, vii. 16.

These narrow and selfish views have so much influence in this *city*, that there are several fellow freeholders who fancy the church in danger upon the rising of bank stock.—*Addison.*

In popish countries some impostor cries out, A miracle! a miracle! to confirm the deceived in their errours; and so the *cry* goes round, without examining into the cheat.—*Swift.*

2. Acclamation; popular favour.

The *cry* went once for him,
And still it might, and yet it may again.
Shakespear, Troilus and Cressida.

3. Voice; utterance; manner of utterance; expression.

Sounds also, besides the distinct *cries* of birds and beasts, are modified by diversity of notes of different length, put together, which make that complex idea called tune.—*Locke.*

4. Political object; electioneering pretence.

'Pray, what is the country?' inquired Mr. Rigby. 'The country is nothing; it is the constituency you have to deal with.'—'And to manage them you must have a good *cry*,' said Taper. 'All now depends upon a good *cry*.'—'So much for the science of politics,' said the Duke, bringing down a pheasant.—*Disraeli the younger, Coningsby*, b. ii. ch. iii.

5. Yelping of dogs; yell; inarticulate noise.

There shall be the noise of a *cry* from the fishgate, and an howling from the second, and a great crashing from the hills.—*Zephaniah*, i. 10.

He scorns the dog, resolves to try
The combat next; but if their *cry*
Invades again his trembling ear,
He strait resumes his wonted care. *Waller.*

6. Noise of hounds on the scent.

In a wood of Crete they bay'd the bear
With hounds of Sparta: never did I hear
Such gallant chiding; for, besides the groves,
The skies, the fountains, every region near
Seem'd all one mutual *cry*. I never heard
So musical a discord, such sweet thunder.
Shakespear, Midsummer-Night's Dream, iv. 1.

Cryer. *s.* Crier: (of which it is the better-spelt form).

Crying. *part. adj.* Proclaiming itself; calling for cognizance: (specially applied to *sin*).

Perjury had become the *crying* curse of the land.—*C. H. Pearson, The early and middle Ages of England*, ch. xxxiii.

There is a *crying* for wine in the streets; all joy is darkened.—*Isaiah*, xxiv. 11.

These troubles are nothing unto his mighty *cryings*, who was compassed about for our sakes with fears and horrours, till his sweat was as drops of blood.—*Dering, Exposition on ch. 5 of the Hebrews.*

Crypt. *s.* [Ital. *cripta.*] Vault in churches.

This I write, because Bristowe would have Jerome, by often entering into the *crypts* or vaults of the churches at Rome, to signify that he went on pilgrimage.—*Fulke, Defence of the Translation of the Bible, Tract at the end*, p. 24.

It sometimes happens that the *crypt* under a church is older than any part of the superstructure, as at Hexham, and Ripon, at York, Worcester, and Rochester cathedrals.—*Glossary of Architecture.*

Crýptic. *adj.* Hidden; secret; occult; private; unknown. *Rare.*

The students of nature, conscious of her more *cryptick* ways of working, resolve many strange effects into the near efficiency of second causes.—*Glanville, Apology for Philosophy.*

Crýptical. *adj.* Same as Cryptic. *Rare.*

Speakers, whose chief business is to amuse or delight, do not confine themselves to any natural order, but in a *cryptical* or hidden method adapt every thing to their ends.—*Watts.*

Crýptically. *adv.* Occultly; secretly. *Rare.*

We take the word acid in a familiar sense, without *cryptically* distinguishing it from those sapors that are akin to it.—*Boyle.*

Crýptogam. *s.* Plant belonging to the Cryptogamia.

And well-developed *cryptogams* in common with all phanerogams, exhibit this genesis of mechanical motion still more conspicuously in the circulation of sap.—*Herbert Spencer, Data of Biology*, § 22.

Cryptogámia. *s.* In *Botany.* Class so called. See extract.

The artificial system, deservedly in most general use, is that invented by the celebrated Linnæus, and which commonly bears his name, as the Linnæan arrangement of plants. It is based upon the number and relative position of the essential organs of the flower, in all those cases where these are distinctly present; while a single class is made to include all those plants which I have described in an earlier chapter as flowerless, but in which it was assumed by Linnæus that the reproductive parts were of the same nature, only of microscopic size. Of his twenty-four classes, twenty-three are devoted to the flowering plants; the last contains the whole of the flowerless tribes. The more extended knowledge of these lower forms of plants in the present day has, in natural systems of plants, raised this last class, the *Cryptogamia*, or plants with hidden flowers, into a rank where it stands beside all the others collected into one, under the name of Phanerogamia, or plants with conspicuous flowers.—*Henfrey, Rudiments of Botany*, ch. v. sec. 2.

Cryptogámic. *adj.* See extract.

Cryptogamic plants are those which never produce flowers or sexes, but which are multiplied without the aid of sexual intercourse. Linnæus gave them their name, upon the supposition that they in fact do possess sexual organs, although he was unable to discover them.—*Brande, Dictionary of Science, Literature, and Art.*

Cryptógamous. *adj.* Same as Cryptogamic.

(For example, see extract under Cryptogamy.)

Cryptógamy. *s.* [Gr. κρύπτω = conceal, γάμος = marriage.] In *Botany.* Condition of plant whose fructification is not effected by means of anthers and ova.

The picturesque dingle Nant-y-bi abounds with what the botanists name the *cryptogamous* plants. The idea of *cryptogamy* inspired Timæus with ideas of loves of other kind; and he makes our Nant the tender scene of courtship for all the nymphs and swains of Whiteford parish, which he candidly admits does always terminate in honest matrimony in the parish church.—*Pennant, History of Whiteford and Hollywell*: 1796.

Cryptógraphy. *s.* [Gr. κρύπτω = hide, γράφω = write.] Art of secret writing; art of writing in cipher.

The strange *cryptography* of Gaffarel in his starry book of Heaven.—*Sir T. Browne, Cyrus' Gardens.* (Rich.)

Crýstal. *s.* [Gr. κρύσταλλος.] Solid of a definite form assumed when certain bodies are deposited from a solution.

If the menstruum be overcharged, within a short time the metals will shoot into certain *crystals*.—*Bacon.*

Such a combination of saline particles as resembles the form of a *crystal*, variously modified, according to the nature and texture of the salts. The method is by dissolving any saline body in water, and filtering it, to evaporate, till a film appear at the top, and then let it stand to shoot; and this it does by that attractive force which is in all bodies, and particularly in salt by reason of its solidity; whereby, when the menstruum or fluid, in which such particles flow, is sated enough or evaporated, so that the saline particles are within each other's attractive powers, they draw one another more than they are drawn by the fluid, then will they run into *crystals*. And this is peculiar to those, that let them be ever so much divided and reduced into minute particles, yet when they are formed into *crystals*, they each of them reassume their proper shapes; so that one might as easily divest them of their saltness, as of their figure. This being an immutable and perpetual law, by knowing the figure of the *crystals*, we may understand what the texture of the particles ought to be, which can form those *crystals*; and, on the other hand, by knowing the texture of the particles, may be determined the figure of the *crystals*.—*Quincy.*

In virtue of forces acting as this hypothesis assumes, a collection of small magnetic particles would arrange themselves in parallel positions; and such a collection of magnetic particles offers a sort of image of a *crystal*. Thus we are led to conceive the particles of *crystals* as polarized, and as determined in their crystalline positions by polar forces. This mode of apprehending the constitution of *crystals* has been adopted by some of our most eminent philosophers.—*Whewell, History of Scientific Ideas*, i. 366.

The Greek υ becomes *y*, and ου becomes *u*, in English as in Latin, as *crystal*, colure. The consonants κ and χ become *c* and *ch* according to common usage. Hence we write *crystal*, not *chrystal*, batrachian, not batracian, cryolite, not chrolite.—*Whewell, Novum Organon renovatum*, p. 399.

Crýstal. *adj.*

1. Consisting of crystal.

By *crystal* streams that murmur through the meads.
Dryden.

Crýstalline. *adj.*

1. Consisting of crystal.

Shakespear, Cymbeline, v. 4.

We provided ourselves with some small receivers, blown off *crystalline* glass.—*Boyle.*

2. In *Mineralogy.* Formed by crystallization.

In short, the most definite of the properties of perfect chemical compounds is their *crystalline* structure; and therefore it is evident that the *crystalline* structure of each body, and the forms which it affects, must be in a most intimate dependence upon its chemical composition.—*Whewell, History of Scientific Ideas*, ii. 27.

We can, however, through one kind of molecular change, produce sensible changes of aggregation such as possibly might, when occurring in organic substance, cause sensible motion in it; I refer to allotropic change. Sulphur, for example, assumes different *crystalline* and non-crystalline forms at different temperatures, and may be made to pass backwards and forwards from one form to another, by slight variations of temperature; undergoing each time an alteration of bulk.—*Herbert Spencer, Data of Biology*, § 22.

Constructed for the most part of hard *crystalline* rock, decomposing or weathering by the constant action of the sea and weather; exposed to the incessant dash of the waves coming in from the Atlantic, which are thrown back by the coast of the Contentin, only to meet a fresh arrival of others, all bound on the errand of destruction; the islands have been for countless ages beaten about, penetrated, rounded, broken, and carried away, leaving now only a fretwork of those hardest barriers that have resisted the attack, and are enabled to present a bold and serried front against their relentless enemy.—*Austed, The Channel Islands*, p. 7.

3. Bright; clear; pellucid; transparent.

The clarifying of water is an experiment tending to the health: besides the pleasure of the eye, when water is *crystalline*. It is effected by casting in and placing bodies at the head of the current, that the water may strain through them.—*Bacon, Natural and Experimental History.*

The parts of the eye are made convex, and especially the *crystalline* humour, which is of a particular figure, convex on both sides.—*Ray, Wisdom of God manifested in the Works of the Creation.*

This is calm luxuriance of blissful light,
These *crystalline* pavilions and pure fanes
Of all my lucent empire. *Keats, Hyperion*, i.

With the *accent* on the *second* syllable.

He on the wings of cherub rode sublime
On the *crystalline* sky, in saphir thron'd.
Milton, Paradise Lost, vi. 771.

Crystallizátion. *s.* Solidification into crystals; crystallized mass.

All natural metallick and mineral *crystallizations* were effected by the water, which first brought the particles, whereof each consists, out from amongst the matter of the strata.—*Woodward, Essay towards a Natural History of the Earth.*

If the theories of heat, cohesion, *crystallization*, and chemical action, are destined, as there can be little doubt that they are, to become deductive, the

truths which will then be regarded as the principia of those sciences would probably, if now announced, appear quite as novel as the law of gravitation appeared to the cotemporaries of Newton; possibly even more so.—*J. S. Mill, System of Logic*, pt. iii. ch. xiii. § 7.

Crýstallize. *v. n.* Take the crystalline form.

Recent urine will *crystallize* by inspissation, and afford a salt neither acid nor alkaline.—*Arbuthnot, On the Nature and Choice of Aliments.*

If this inference be correct, it supplies us with an explanation both of the chemical inertness of these most complex organic substances, and of their inability to *crystallize*.—*Herbert Spencer, Data of Biology*, pt. i. ch. i. § 6.

Crýstallize. *v. a.* Cause to take the crystalline form.

If you dissolve copper in aqua fortis, or spirit of nitre, you may, by *crystallizing* the solution, obtain a goodly blue.—*Boyle.*

Crystallógrapher. *s.* Investigator of crystalline forms: (chiefly in their application to *Mineralogy*).

In the present condition of science, minerals, considered as such, and not as geological materials, fall rather within the province of the chemist and *crystallographer*, than the naturalist.—*E. Forbes, Literary Papers*, 165.

Crýstallográphically. *adv.* After the manner of a crystallographer, or of crystallography.

But as all the forms which he introduces appear to belong to the tessular system of crystallization, there is, in his reasonings, nothing distinctive; and therefore nothing, *crystallographically* speaking, of any weight on the side of this theory.—*Whewell, History of Scientific Ideas*, p. 89.

Crystallógraphy. *s.* [Gr. γράφω = describe.] Description of crystals; notation of crystalline forms.

The arrangement of simple minerals has always been a subject of controversy with mineralogists. . . Berzelius contends for the chemical arrangement . . . Werner adopts the mixed method. . . . Of late years the plan or arrangement according to external characters alone has been advocated by Mohs. . . . The first form *crystallography* takes in the consideration of the regular forms occurring in the mineral kingdom, is to distinguish them into simple and compound ones. . . . A compound form is termed a combination. . . . An object of the greatest importance in *crystallography* is the illustration of the development of the combination.—*Encyclopædia Britannica, Mineralogy.*

Crýstalloid. *adj.* [Gr. εἶδος, from εἶδος = form, an affix in numerous compounds, nearly equivalent to *-like* in English.] Having the form or likeness of a crystal.

The inquiry suggests itself whether the colloid molecule may not be constituted by the grouping together of a number of smaller *crystalloid* molecules, and whether the basis of colloidality may not really be this composite character of the molecule.—*Herbert Spencer, Data of Biology*, § 6.

Crýstalloid. *s.* That which has the form or likeness of a crystal.

A further contrast between colloids and *crystalloids*, is equally significant in its relations to vital phenomena.—*Herbert Spencer, Data of Biology*, § 7.

Cténoid. *adj.* [Gr. κτείς, κτενός = comb.] See Cycloid.

Cub. *s.* [Icelandic, *kobbi* = young of the seal.]

1. Young of a beast: (generally of a *bear* or *fox*).

I would outstare the sternest eyes that look,
Pluck the yeanling suckling *cubs* from the she-bear.
Shakespear, Merchant of Venice, ii. 1.

2. Young of a whale, perhaps of any viviparous fish.

Two mighty whales which swelling seas had tost,
One a mountain vast, and with her came
A *cub*, not much inferior to his dame. *Waller.*

3. Young boy or girl. *Contemptuous.*

O thou dissembling *cub*! what wilt thou be,
When time hath sow'd a grizzle on thy case?
Or will not else thy craft so quickly grow,
That thine own trip shall be thine overthrow?
Shakespear, Twelfth Night, v. 1.

O most comical sight! a country squire, with the equipage of a wife and two daughters, came to Mr. Snipwel's shop last night; but, such two unlicked *cubs*!—*Congreve.*

Cub. *s.*

Cubb'd in a cabin, on a mattress laid,
On a brown George with lousy swabbers fed;

From a foul jack, or greasy maple cup.
Dryden, Persius's Satires.

Cub. *v. a.* [? *cupboard.*] Shut up; confine as in a cub: (with *up*).

1. Regular solid, consisting of six square and equal faces or sides, with the angles all right.

Not distant far with heavy pace the foe
Approaching gross and huge, in hollow *cube*
Trailing his devilish enginery.
Milton, Paradise Lost, vi. 551.

2. In *Arithmetic.* Product of any number multiplied twice into itself.

All the master planets move about the sun at several distances, as their common centre, and with different velocities. This common law being observed in all of them, that the squares of the times of the revolutions are proportional to the *cubes* of their distances.—*Grew, Cosmologia Sacra.*

Cúbic. *adj.* Same as Cubical.

The number of four, multiplied into itself, produceth the square number of sixteen; and that again multiplied by four, produceth the *cubick* number of sixty-four. If we should suppose a multitude actually infinite, there must be infinite roots, and square and *cubick* numbers; yet, of necessity, the root is but the fourth part of the square, and the sixteenth part of the *cubick* number.—*Sir M. Hale, Origination of Mankind.*

Cúbical. *adj.* In *Geometry* and *Arithmetic.* Having the form or properties of a cube.

It is above a hundred to one, against any particular throw, that you do not cast any given set of faces with four *cubical* dice; because there are so many several combinations of the six faces of four dice.—*Bentley, Sermons.*

The number of ten hath been as highly extolled, as containing even, odd, long and plain, quadrate and *cubical* numbers.—*Sir T. Browne, Vulgar Errours.*

Cúbically. *adv.* In a cubical method.

Such is sixty-four, either made by multiplying eight into eight, and so it is a square; or else by multiplying four *cubically*.—*Dr. H. More, Conjectura Cabalistica*, p. 217.

Cúbicalness. *s.* State or quality of being cubical.

If thinking were a mode or species of notion, then in like manner, as it is a proper expression to say that circularity is one species of figure, and squareness a second, and *cubicalness* a third, and ellipticalness a fourth, so it would be proper to say that circular motion is one species of motion, &c.—*Clarke, Third Defence.* (Rich.)

Cubícular. *adj.* Belonging to the chamber.

Being the inseparable *cubicular* companion the king took comfort in, in the height of his troubles.—*Howell, Familiar Letters*, iv. 16.

From the tip of the elbow to the end of the long finger, is half a yard and a quarter of the stature, and makes a *cubit*; the first measure we read of, the ark of Noah being framed and measured by *cubits.*—*Holder, Discourse concerning Time.*

The Jews used two sorts of *cubits*; the sacred, and the profane or common one.—*Arbuthnot, Tables of ancient Coins, Weights, and Measures.*

Cúckingstool. *s.* [?] Engine invented for the punishment of scolds and unquiet women. See Duckingstool.

The fixed *cucking-stool* was found in a perfect state near Worthing, by my late friend Mr. Curwood the barrister; and the movable one was noticed in a state equally perfect at Wootton Bassett, by Mrs. Hairs of that place, who is still living.—*F. A. Carrington, Archæological Journal*, xiii. 256: 1856.

In all well-ordered cities, common brawlers and scolders be punished with a notable kind of pain; as to be set on the *cucking-stool*, pillory, or such like.—*Homilies*, b. i. *Against Contention.*

We'll ship them out in *cuck-stools*, there they'll sail
As brave Columbus did.
Beaumont and Fletcher, Tamer Tamed

Which moderns call a *cucking-stool*,
March proudly to the river's side.
Butler, Hudibras

[Derived by Hickes from *coquing*, anciently *cockaine*, signifying an idle jade, a base woman. But it seems nearly allied to the Teut. *kaecke*, a sort of pillory. It is sometimes called a *duckingstool*, because the scold, after having been placed in a chair or stool fixed at the end of a long pole, was submerged in some muddy or stinking pool. The Saxons (for it is of great antiquity) called it *scealding-stole*. Brewers and bakers, transgressing against the laws, were also formerly thus punished. Our Homilies notice the punishment as inflicted on the unquiet.—*Johnson.*]

It was also called *goging-stool*. A. Sax. *gong-stole*, a close-stool.—*Wedgwood, Dictionary of English Etymology.*]

Cúckold. *s.* One who is married to an adultress; one whose wife is false to his bed.

But for all the whole world; why, who would not make her husband a *cuckold*, to make him a monarch? I should venture purgatory for't.—*Shakespear, Othello*, iv. 3.

There have been,
Or I am much deceiv'd, *cuckolds* ere now:
And many a man there is, ev'n at this present,
Now while I speak this, holds his wife by th' arm,
That little thinks she has been sluic'd in 's absence.
Id., Winter's Tale, i. 2.

For though the law makes null th' adulterer's deed
Of lands, to her the *cuckold* may succeed.

Cúckoldry. *s.* System of making, or being made, cuckolds.

A custom is sometim[illegible]s as difficult to explain to a foreigner as a pun. What would become of a great part of the wit of the last age, if it were tried by this test? [illegible] thee bird,
[illegible]

[illegible] what a [illegible] art thou then, to praise him so for running! — A horseback, ye *cuckoo*! — but afoot, he will [illegible] a foot.—*Shakespear, Henry IV. Part I.* ii. 4.

Cúckoo-bud. *s.* Ranunculus bulbosus, a native wild flower.

The S. Sophia of Constantine was razed to the ground in a fierce tumult; but on its site arose the new S. Sophia, in the East the pride, in the West the wonder, of the world. The sublime unity and harmony of the design, above all the lightness and vastness of the *cupola*, were too marvellous for mere human science. Even the skill of the famous architects Anthimus of Tralles and Isidore of Miletus were unequal to the conception. An angel revealed to the emperor (Justinian himself must share in the glory) many of the forms of the building; the great principle of the construction of the *cupola*, sought in vain by the science of the architects, flashed across the mind of the emperor himself in a dream. The *cupola* did not seem, according to the historian Procopius, to rest on its supports, but to be let down by a golden chain from heaven. Santa Sophia was proclaimed in the West as the most consummate work of Christian architecture.—*Milman, History of Latin Christianity*, b. xiv. ch. viii.

Curb. *s.* In *Farriery.* See extract.

There are often injuries of particular parts of the hock-joint. *Curb* is an affection of this kind. It is an enlargement at the back of the hock, three or four inches below its point. . . . It is either a strain of the ring-like ligament which binds the tendons in their place, or of the sheath of the tendons: oftener, however, of the ligament than of the sheath. Any sudden action of the limb of more than usual violence may produce it, and therefore horses are found to 'throw out *curbs*,' after a hardly contested race, an extraordinary leap, a severe gallop over heavy ground, or a sudden check in the gallop. . . . *Curbs* are generally accompanied by considerable lameness at their first appearance, but the swelling is not always great. In an abridgment of his views, given in the Supplement to the Encyclopædia Britannica, English names were proposed as the equivalents of these; *Curlcloud*, Sondercloud, Wanecloud, Twaincloud, Stackencloud, Raincloud, Fallcloud. Upon these Mr. Howard observes: 'I mention these, in order to have the opportunity of saying that I do not adopt them. The names for the clouds which I deduced from the Latin, are but seven in number, and very easy to remember. They were intended as arbitrary terms for the structure of clouds, and the meaning of them was carefully fixed by a definition.—*Whewell, Novum Organon renovatum*, p. 293.

[*Curry* in the sense of dressing skins has very naturally been derived from *corium*, a hide; whence *coriarius* might well signify a dresser of hides. Italian, *cuoiaro*, a currier. But it is certain that the derivation is very different. The origin is the Italian, *corredare*, to prepare, set out, to rig a ship, set out a bride; Spanish, *conrear*, to prepare wool for working by boiling it; French, *conroyer*, to curry or dress leather, to roughhew timber, to work anything thoroughly. From the same root compounded with *ad* instead of *con* is Italian *arredare*, to garnish, equip a ship; French, *arrayer*; English, *array*. . . . *To curry a horse*, is only a special application of the sense of dressing or working anything thoroughly.
'Et frote et *conroie* et estrille.
Li vilains son roncin atore.'
(Fables et Contes. 3. 198.)

To *curry favour* is a proverbial expression corrupted from 'curry favel.' French, *étriller fauveau*, to curry the chesnut horse. 'Tel étrille Fauveau qui puis le mord,' the ungrateful jade bites him that does him good. (Cotgrave.) It was usual to make a proper name of the colour of a horse, and to speak of the animal as Bayard, Dun, Lyard (French, *liart*, grey), Ball (whitefaced), Favel (French, *Fauveau*, from *fauve*, fallow), and any of these was taken proverbially for horse in general. 'Dun is in the mire.' 'Who so bold as blind Bayard?' When the meaning of Favel in the proverb was no longer understood, the sense was made up by the substitution of *favour*.—*Wedgwood, Dictionary of English Etymology.*]

Curry favour. [Fr. *courvoyer fauvel* = rub the fauvel, or the bay horse.] Become a favourite by petty officiousness, slight kindnesses, or flattery.

Cuttle-bone. *s.* Internal shell, or pen, of the cuttlefish: (in the following extract we have, probably, *two words* and an *adjectival* construction, rather than a true compound).

The bone or shell is thick, but depressed . . . the substance of the *cuttle-bone* is composed of numerous testaceous laminæ, separated from each other by a perpendicularly fibrous calcified tissue, exhibiting a shining white and satiny lustre, and having a pumiceous aspect and feel. . . . The bone (often used for pounce) equals in length the body without the fins.—*Forbes and Hanley, British Mollusca.*

Cúttlefish. *s.* Same as Cuttle.

He that uses many words for the explaining any subject, doth, like the *cuttle fish*, hide himself for the most part in his own ink.—*Ray, Wisdom of God manifested in the Works of the Creation.*

Among the higher aquatic invertebrata,—*cuttle-fishes* and lobsters, for instance,—there is a very considerable power of locomotion; and the aquatic vertebrata are, considered as a class, much more active in their movements than the other inhabitants of the water.—*Herbert Spencer, Inductions of Biology.*

Cútwork. *s.* Openwork in embroidery: (used *adjectivally* in the first extract.) *Obsolete.*

It graz'd on my shoulder, takes me away six purls of an Italian *cut-work* band I wore, cost me three pound in the Exchange but three days before.—*B. Jonson, Every Man out of his Humour.*

Then his band
May be disorder'd, and transform'd from lace
To *cut-work*. *Beaumont and Fletcher, Coronation.*

Cy-, like Con- and Co-, which have gone before, is a combination which gives the initial syllable of a definite and of words, and, as such, does amount of preliminary and most general state is, that the words which and all of Greek deriva[illegible] not be *originally* Greek, because there are several words which, though Greek is the first language in which we find them, may have been adopted by the Greeks from other languages. Still, the language which gives them their sound and orthography is, *in the first instance*, Greek. It is submitted that, for reasons which will soon appear, this rule is absolute.

The next is, that all such words, however Greek they may be in the form under which they are introduced into the English language, are *not* Greek in their immediate or direct origin. They are, one and all, words which having been previously Greek were next Latin, and which, after having been Latin, were finally Anglicized.

This introduction through the Latin may have been in one of two ways. It may have been from the Latin direct; or, indirectly, through the Italian, Spanish, or French offshoots of the Latin. As far as the form in English is concerned, the result is the same whichever view we take.

The *c* in Latin represents a Greek κ; the former being sounded in English as *s*, the latter as *k*; a fact which bears upon certain points of pronunciation. Also, the Latin *y* represents a Greek υ, the sound of which, even in English, is that of the *oo* in *tooth*. This *y*, in English, is sounded as either the *i* in *pit* and *pike*, or the *ee* in *sweet*. Hence the phonetic transformation is from *koo-* to *si-*, and hence the rule that it is only through a Greek origin and a Latin medium that any word in English can begin with *cy-*; a fact which rules the spelling, and excludes more than one word of uncertain origin; such as *cipher* (rather than *cypher*) and others.

The question now arises as to the form which should be taken by words derived *directly* from the Greek, as in the case of several scientific terms of modern coinage; words which, though in some instances they may come into the English from the French or some other derivative of the Latin, never came into it through the Latin. Such a word is Cytoblast, as opposed to Cycle. The answer on this matter is, that *the Latin form is adopted and extended*; and that even when, in words like Esthetics, Economy, &c. (see remarks on Æ), it is departed from, the inconsistency is apparent only: the following being the chief points of difference between the two classes of words —

1) In getting rid of *æ*, we get rid of an anomalous and extraneous letter; a letter neither really forming part of our alphabet, nor definitely excluded from it. In *cy-* we merely retain what already exists.

2) In writing *e* for *æ*, we suggest no change of sound. In writing *ku* for *cy*, we suggest a change in certain old and well-established words, e.g. *cycle* and *cylinder*.

Cyánogen. *s.* [see extract.] In *Chemistry*. Bicarburet of nitrogen. (It has *Cyanide*, *Cyanuret*, and other congeners.)

This gaseous compound was discovered in 1815 by Gay-Lussac, and termed *cyanogen* (from κύανος blue, and γεννάω, I generate) in consequence of its being essential in the formation of Prussian blue.—*Brand, Manual of Chemistry*, p. 503.

Cycadáceous. *adj.* [Lat. *cycas, cycad-os*; Gr. κύκας.] In *Botany*. Belonging to the [illegible]cadaceæ, chiefly repre[illegible]era Cycas and Zamia, [illegible] plants supplies the sago [illegible] See Sago.

[illegible] [Lat. from Gr. κυκλάμινος.] [illegible]*ny*. Sowbread (Cyclamen euro[illegible]eum), an indigenous plant; florist's flower so called, of which there are several kinds, as C. persicum, &c.

Thirdly, a kind of *cyclamen*, or sow-bread.—*Bishop Sprat, History of the Royal Society*, p. 211.

Transplant autumnal *cyclamens* now, if you would change their place.—*Evelyn, Calendarium hortense.*

Cýcle. *s.* [Gr. κύκλος = circle.]

1. Round of time; space at the close of which the same revolutions begin again; period.

We do more commonly use these words, so as to style a lesser space a *cycle*, and a greater by the name of period; and you may not improperly call the beginning of a large period the epocha thereof.—*Holder, Discourse concerning Time.*

Given the year of the Julian period, those of the subordinate *cycles* are easily determined as above. Conversely, given the years of the solar and lunar *cycles*, and of the indiction, to determine the year of the Julian period proceed as follows:—Multiply the number of the year in the solar *cycle* by 4845, in the lunar by 4200, and in the *cycle* of the indictions by 6916; divide the sum of the products by 7980, and the remainder is the year of the Julian period sought.—*Sir W. Herschel, Outlines of Astronomy*, § 925.

It is at our choice to try these and other modes of obtaining a science of the weather: that is, we may refer the phenomena to the idea of time, introducing the conception of a *cycle*;—or to the idea of external force, by the conception of the moon's action;—or to the idea of mutual action, introducing the conceptions of thermotical and atmological agencies, operating between different regions of earth, water, and air. It may be asked, How are we to decide in such alternatives? How are we to select the one right idea out of several conceivable ones? To which we can only reply, that this must be done by trying which will succeed. If there really exist a *cycle* of the weather, as well as of eclipses, this must be established by comparing the asserted *cycle* with a good register of the seasons, of sufficient extent.—*Whewell, Novum Organon renovatum*, b. iii. ch. v. sect. 2, § 5.

2. Calendar.

We thought we should not attempt an unacceptable work, if here we endeavour to present our gardeners with a complete *cycle* of what is requisite to be done throughout every month of the year.—*Evelyn, Calendarium hortense.*

3. Orbit. See Epicycle.

How build, unbuild, contrive
To save appearances; how gird the sphere
With centrick and eccentrick, scribbl'd o'er
Cycle and epicycle, orb in orb!
Milton, Paradise Lost, viii. 881.

4. In *Literature*. Subject matter for poetry, consisting of several actions and heroes connected with a main one; such as, in the poetry of ancient Greece, those connected with the Trojan and Theban wars, the Argonautic expedition, and other materials for narrative and epic poetry. In modern literature, the chief analogues of these are the legends of King Arthur and the Round Table, the Spanish expedition of Charlemagne, and the story of the Nibelungs. See Cyclic and Circler.

Their superstition has more of interior belief and less of ornamental machinery than those to which the Amadis de Gaul and other heroes of the later *cycles* of romance furnished a model.—*Hallam, Introduction to the Literature of Europe in the fifteenth, sixteenth, and seventeenth Centuries*, pt. i. ch. ii. § 57.

Far be it from us, meanwhile, to venture rashly, or farther than is needful, into that same traditionary chaos, fondly named the '*Cycle* of Northern Fiction,' with its fourteen sectors (or separate poems), which are rather fourteen shoreless limbos where we hear of pieces containing 'a hundred thousand verses,' and 'seventy thousand verses,' as of a quite natural affair! . . . The primeval mythus . . . floats too vaguely on the breath of men; each successive singer and redactor furnishes it with new personages, new scenery, to please a new audience; each has the privilege of inventing, and the far wider privilege of borrowing and new-modelling from all that preceded him.—*Carlyle, Miscellanies, The Nibelungen Lied.*

Cýcle. *v. n.* Recur in cycles.

It may be that no life is found,
Which only to one engine bound
Falls off, but *cycles* always round.
Tennyson, The Two Voices.

Cýclic. *adj.* Connected with a cycle, generally in the sense it bears in *Literature*: (from the difference in respect to originality between the poet who first wrote upon a subject capable of being developed into a cycle, and those who merely expanded it, the term was not always a complimentary one). See Circler.

The Homer of this race of *cyclic* poets was to be an Italian. It was not till these poems had sunk into popular tales . . . that they were seized first by the bold and accomplished Boiardo, afterwards by the inimitable Ariosto, and in their full ancient spirit, yet with some fine modern irony, bequeathed to mankind in the most exquisite and harmonious Italian.—*Milman, History of Latin Christianity*, b. xiv. ch. vi.

Cýcloid. *s.* [Gr. κυκλοειδής = resembling a circle.] Curve described by a point in the circumference of a circle which rolls along a straight line till it has completed a revolution.

A man may form to himself the notion of a parabola, or a *cycloid*, from the mathematical definition of those figures.—*Reid, Inquiry into the human Mind.*

Cýcloid. *adj.* Having the character of a cycloid; subcircular: (one of its special applications is in *Icthyology*, where it relates to the scales of fishes like the carp, dace, and, indeed, the majority of the existing osseous species. The classification founded by Agassiz on this, along with three other terms, Ctenoid, Ganoid, and Placoid, is important in *Geology*; the external covering being in many cases, the chief means we have for determining the character of a fish when fossilized).

I described the organic structure of these so-called *ganoid* scale bones in 1840, in both recent and extinct fishes, showing that it militated against the theory of development by successive deposition of layers being applied, at least, to ganoid scales. A like organisation prevails in the tri-radiate dermal bones which support the strong spines of the Diodon; and in the usually unenamelled, less regularly formed and arranged, dermal *placoid* ossicles of sharks and rays. The thinner subtransparent scales of ordinary osseous fishes are either sub-circular and with entire margins as in the carp, when they are called *cycloid*, or have the outer and hinder margin dentated or spined, as in the perch, when they are called *ctenoid*. We have seen that the primary classification of fishes in the system of M. Agassiz, is based on these various modifications of the dermal skeleton.—*Owen, Lectures on Comparative Anatomy*, lect. vi.

Cycloídal. *adj.* Having the character of a cycloid.

Hence, despite the beauty of Huyghens' invention, we have been obliged to abandon his flexible *cycloidal* pendulum, and now exclusively make use of a rigid pendulum, restrained to describing only small arcs.—*Smyth and Grant, Translation of Arago's Popular Astronomy*, b. ii. ch. x.

Cyclómetry. *s.* Art of measuring cycles or circles.

I must tell you, that Sir H. Savile had confuted Joseph Scaliger's *cyclometry*.—*Wallis, Due Correction of Hobbes*, p. 116: 1656.

Cycloón. *s.* [new word from Gr. κύκλος. —as this word, though at present but imperfectly naturalized, is a necessary one, the present spelling is suggested on the precedents *doubloon*, *typhoon*, *balloon*, and others.] Rotatory storm.

Frequently combination occurs, and dynamical effects are produced in proportion. These are particularly evident in the meetings of tropical and polar winds (by the west), by their subsequent continuance in strength as mixed winds, and by the concurrence or combination of *cyclones*. Successive, or rather consecutive, gyrations, circuits, or *cyclones*, often affect one another, acting as temporary mutual checks, until a combination and joint action occurs: their union causing then much greater effects, as may be seen even in water-currents as well as in the atmosphere itself.—*Lord Ashburton, Address to the Geological Society*, 1862.

Cyclopéan. *adj.* Having the character of a Cyclops. (One of its chief special applications is in *Architecture* and *Archeology*, where it means, consisting of large roughhewn or unhewn masses of stone, fitted together without cement, such as in Greece and Italy suggested the notion of the ruins in which they were found having been the work of the Cyclopes.)

The *cyclopean* furnace of all wicked fashions, the heart, calls my speech to it.—*Bishop Hall, Sermons, Fashion of the World.*

Cýclopede. *s.* See Encyclopedia.

Heavy penalties were imposed on those academies, who relinquished the sacred text, to explain the tedious and unedifying commentaries on Peter Lombard's scholastic *cyclopede* of divinity, called the Sentences, which alone were sufficient to constitute a moderate library.—*T. Warton, History of English Poetry*, ii. 450.

Cyclopédia. *s.* See Encyclopedia.

Cyclópic. *adj.* Having the character of a Cyclops; savage.

Sending a bill of defiance to all physicians, chirurgeons, and apothecaries, as so many bold giants, or *cyclopick* monsters who daily seek to fight against heaven by their rebellious drugs and doses!—*Jeremy Taylor, Artificial Handsomeness*, p. 53.

Cýclops. *s.* pl. *Cyclōpes.* [Gr. κύκλος = circle, ὤψ = eye; Lat. *Cyclops.*] Giant of the Greek mythology so called. (The Cyclopes are described as huge misshapen monsters inhabiting Sicily, with one eye, and that in the middle of the forehead. The word is entered on account of its derivatives Cyclopean and Cyclopic, rather than on its own merits, being a proper rather than a common name, and being Greek or Latin rather than English.)

Cyclostome. *s.* [Gr. κύκλος = circle; στόμα = mouth.] In *Ichthyology*. Fish (like the lamprey) with a mouth formed for sucking.

The primitive spermatic cells, which are persistent in the *cyclostomes*, have coalesced into tubes in osseous fishes.—*Owen, Anatomy of Vertebrates.*

Cýgnet. *s.* [Lat. *cygnus*; Gr. κύκνος.] Young swan.

I am the *cygnet* to this pale faint swan,
Who chaunts a doleful hymn to his own death.
Shakespear, King John, v. 7.

Cygnets, from grey, turn white.—*Bacon, Natural and Experimental History.*

Young *cygnets* are good meat, if fatted with oats;

but fed with weeds, they taste fishy.—*Mortimer, Husbandry.*

Cylinder. *s.* [Lat. *cylinder*; Gr. κύλινδρος, from root of κυλίνδω = roll.] Body having two parallel flat surfaces and one circular.

The quantity of water which every revolution does carry, according to any inclination of the *cylinder*, may be easily found.—*Bishop Wilkins.*

The square will make you ready for all manner of compartments, bases, pedestals, plots, and buildings; your *cylinder* for vaulted turrets, and round buildings.—*Peacham.*

If one body be a sphere and another a *cylinder*, of equal height and diameter, the one will be exactly two-thirds of the other, let the nature and quality of the material be what it will.—*Mill, System of Logic*, iii. 5, § 1.

Cylíndric. *adj.* Same as Cylindrical.

Minera ferri stalactitia, when several of the *cylindrick* striæ are contiguous, and grow together into one sheaf, is called brushiron ore.—*Woodward, Essay towards a Natural History of the Earth.*

Cylíndrical. *adj.* Partaking of the nature of a cylinder; having the form of a cylinder.

Obstructions must be most incident to such parts of the body where the circulation and the elastick fibres are both smallest, and those are glands, which are the extremities of arteries formed into *cylindrical* canals.—*Arbuthnot, On the Nature and Choice of Aliments.*

Cylíndricule. *s.* Small cylinder.

The posterior or outer layer of the retina consists of the cellular basis, supporting the stratum of *cylindricules*, standing vertically upon its concave surface, with the interblended twin-fusiform corpuscles, both of which microscopic structures are more easily demonstrated in the present than in the higher classes of vertebrata. Each twin-corpuscle is surrounded by a circle of *cylindricules*.—*Owen, Anatomy of Vertebrates.*

Cýma. *s.* [from Gr. κῦμα = wave.] In *Architecture.* See extract.

A moulding taking its name from its contour resembling that of a wave, being hollow in its upper part and swelling below. Of this moulding there are two sorts, the *cyma* recta just described, and the *cyma* reversa, wherein the upper part swells, whilst the lower is hollow. By the workmen these are called 'ogees.'—*Gwilt, Encyclopædia of Architecture*, p. 991.

Cýmbal. *s.* [Lat. *cymbalum*; Gr. κύμβαλον.] Musical instrument.

Tabors and *cymbals*, and the shouting Romans,
Make the sun dance. *Shakespear, Coriolanus*, v. 4.

If mirth should fail, I'll busy her with cares,
Silence her clamorous voice with louder wars;
Trumpets and drums shall fright her from the throne,
As sounding *cymbals* aid the lab'ring moon.
Dryden, Aurengzebe.

The Te Deum was sung with unwonted pomp; and the solemn notes of the organ were mingled with the clash of the *cymbal* and the blast of the trumpet.—*Macaulay, History of England*, ch. ix.

Cyme. *s.* [from Gr. κῦμα = young shoot.] In *Botany.* See extract.

Cyme is a general term applied to all forms of inflorescence in which the terminal or middle flower-bud opens first, and all subsequent flowers must be axillary: sometimes the axils below produce pedicels or branches which bear only a single flower; sometimes each branch bears a terminal flower, but also produces lateral flowers in the axils of bracts. These secondary axils may again be branched, so that the pedicels are branches of the third degree, like those of the panicle or umbellule. The inflorescence which in each case is known by the terminal flower of the main stem, and of each main branch opening before their axillary buds, is termed, according to the appearance it presents, a racemose *cyme*, a panicled *cyme*, or a corymbose *cyme*: the latter is the most common, and occurs in the hawthorn and elder. The flowers of the pink kind are borne in *cymes* of various character, as are many of the gentians, the common centaury.—*Henfrey, Rudiments of Botany*, ch. iii. sect. 1.

Cyme. *s.* In *Architecture.* Same as Cyma.

Cynarctómachy. *s.* [Gr. κύων = dog, ἄρκτος = bear, μάχη = battle.] Bear-baiting with dogs: (a word apparently coined by Butler).

That some occult design doth lye
In bloody *cynarctomachy*,
Is plain enough to him that knows,
How saints lead brothers by the nose.
Butler, Hudibras.

Cynegétics. *s.* [Gr. Κυνηγήτικα, from κύων = dog, and the root of ἡγέομαι = lead; the word being the title of a Greek poem by Oppian, on hunting, and, as such, a proper rather than a common name.] Art of hunting; art of training and hunting with dogs.

There are extant in Greek, four books on *cynegeticks*, or venation.—*Sir T. Browne, Vulgar Errours.*

Cýnic. *s.* [Gr. κυνικός = doglike, from κύων = dog.] Philosopher of the snarling or currish sort; follower of Diogenes; rude man; snarler; misanthrope.

Without these precautions the man degenerates into a *cynick*, the woman into a coquette; the man grows sullen and morose, the woman impertinent and fantastical.—*Addison.*

Why call the miser miserable? as
I said before: the frugal life is his,
Which in a saint or *cynic* ever was
The theme of praise: a hermit would not miss
Canonization for the self-same cause,
And wherefore blame gaunt wealth's austerities?
Because, you'll say, nought calls for such a trial;—
Then there's more merit in his self-denial.
Byron, Don Juan, xii. 7.

Used *adjectivally*.

How vilely doth this *cynick* rhime?—
Get you hence, sirrah; saucy fellow, hence.
Shakespear, Julius Cæsar, iv. 3.

Cýnical. *adj.* Having the qualities of a dog; currish; brutal; snarling; satirical.

He doth believe that some new fangled wit (it is his *cynical* phrase) will some time or other find out his art.—*Bishop Wilkins.*

A far wilder speech was that of the dog-philosopher, who termed women necessary evils: of this *cynical* sect, it seems, was he who would make 'orcus' to be the anagram of 'uxor.'—*Howell, Familiar Letters*, iv. 7.

William doubtless read these words with one of those bitter and *cynical* smiles which gave his face its least pleasing expression.—*Macaulay, History of England*, ch. ix.

Cýnically. *adv.* In a cynical manner.

Rather in a satire and *cynically*, than seriously and wisely.—*Bacon, Works*, i. 176. (Ord MS.)

Cýnicism. *s.* Character, temper, state, or condition of a Cynic.

But this *cynicism* is for the most part affected, and serves only as an excuse for some caustic remarks on human nature in general.—*Hallam, Introduction to the Literature of Europe in the fifteenth, sixteenth, and seventeenth Centuries.*

Cýnosure. *s.* [Gr. κυνὸς οὐρα = dog's tail.]

1. Pole star (bright star in the Lesser Bear by which seamen used anciently to steer).

Their compass also is defective; . . . nor is the magnet, till of late, known amongst them; having the *cynosure* and ursa minor for their best directors. —*Sir T. Herbert, Relation of some Years' Travels into Africa and the Great Asia*, p. 377.

Used *metaphorically*.

For the guidance either of our caution or liberty, in matters of borrowing and lending, the only *cynosure* is our charity.—*Bishop Hall, Cases of Conscience.*

2. Point of attraction.

In *cypress* chests my arras counterpanes.

He taketh the *cypress* and the oak, which he strengtheneth for himself among the trees of the forest.—*Isaiah*, xliv. 14.

Poplars and alders ever quivering play'd,
And nodding *cypress* form'd a fragrant shade.
Pope, Homer's Odyssey.

Being anciently used in *funerals*, it is the emblem of mourning.

Poison be their drink,
Their sweetest shade a grove of *cypress* trees.
Shakespear, Henry VI. Part II. iii. 2.

Cýprus. *s.* [*Cyprus*, where it was originally made.] Thin black transparent stuff.

Cyst. *s.* [Gr. κύστις.] Bag containing some morbid matter. (Common in *Medicine*, with two series of derivatives: (*a*) one from *cyst* in the sense of a *bag*, or *bladder*, in general; (*b*) the other from the same word in its more limited sense of *urinary bladder*.) See Encysted.

There may be a consumption, with a purulent spitting, when the vomica is contained in a *cyst* or bag; upon the breaking of which the patient commonly suffocated.—*Arbuthnot, On the Nature and Choice of Aliments.*

The common tapeworm of the cat, Tænia crassicollis, is remarkable for the disproportionate size of the head, the short and thick neck, the position of the four suckers, and the shape and number of the hooklets of the uncinated proboscis: all these peculiarities are repeated in the larval form of tape-worm which is commonly developed in *cysts* of the liver of the mouse and rat, and which has already been described as the Cysticercus [illegible] *tures on Comparat[illegible]*

Cýstic. *adj.* Cont[illegible]

The [illegible] is of two s[illegible] contained in the gall-bla[illegible] gall; or the hepatick, or from the liver.—*Arbuthnot.*

The four orders of the cla[illegible] already been described, are less [illegible] order Nematoidea. . . . The Cestoida, Trematoda, and Acanthocephala, are [illegible] respectively equivalent to the orders N[illegible] either as regards grade, difference, or [illegible] of organic characters. The transition fr[illegible] to the tænioid Entozoa was so obvious and [illegible] by the Cysticercus fasciolaris, for example, that they were combined in the same order Taenioidea in the Règne Animal.—*Owen, Lectures on Comparative Anatomy*, lect. vi.

The contents of the excretory sac consist usually of a colourless fluid containing many granules and vesicles: but sometimes it is filled by clear calcareous corpuscles like those found in the parenchyme of the cestoid worms and their *cystic* larvæ.—*Ibid.*

Cýsticle. *s.* Small cyst.

In some Acalephæ the *cysticles* are not complicated with pigment-cells. In the Æquorea violacea the marginal tentacular interspaces are divided by a mammillary process, on each side of which are two *cysticles*, of an oval or spherical form, containing each two or three spherical corpuscles. In Geryonia, Thaumantias, Oceania and Polyxenia the *cysticles* are sessile upon the circular vessel, and placed between its inner and outer membranes: in Phacellophora as in Cyanea, each *cysticle* is placed at the extremity of a short double-walled tubular pedicle projecting downwards . . . In Cephea and Rhizostoma the *cysticle* is placed in a notch between two lobe-like processes of the margin of the disc and looks upwards. On the upper surface a semilunar fold extends from one lobe to the other and covers the *cysticle*. The *cysticles* are below the marginal tentacles in Thaumantias, but alternate with them in the nearly allied Geryonia. The *cysticles* are yellow in Pelagia noctiluca, but colourless in Cassiopæa and Aurelia, and the colourless pedunculate marginal *cysticles* of Polyxenia leucostyla contain each a single round corpuscle, whilst the *cysticles* of Cytaeis polystyla contain a cluster of yellowish calcareous corpuscles. Will and Siebold regard these contained corpuscles as homologous with the otolites of higher animals and the *cysticle* as an organ of hearing.—*Owen, Lectures on Comparative Anatomy*, lect. ix.

Cýstis. *s.* [Gr.] Same as Cyst.

In taking it out the *cystis* broke, and shewed itself by its matter to be a meliceris.—*Wiseman, Surgery.*

Cýtoblast. *s.* [Gr. κύτος = vessel, and root of βλαστάνω = bud or germinate.] Nucleus of the primary cell in vegetables when the cell is developed; corresponding element in animals. (In *Physiology*, it has *Cytoblastema* and other derivatives.)

Schleiden has published some extremely interesting observations upon this body, which he regards as a universal elementary organ, and calls a *cytoblast*. . . . In the interior of the *cytoblast*, or sunk in its surface, is a small well-defined body. . . . The spherule varies in size from half the diameter of the *cytoblast* to a point too small to be measured; and Schleiden believes that this minute body is formed earlier than the *cytoblast* itself.—*Lindley, Introduction to Botany*, vol. i. b. i. ch. i.

He who measures the orbit of a comet has not, therefore, higher faculties than he who examines the *cytoblast* of a fungus.—*W. Macgillivray, Natural History of Deeside and Braemar*, p. 121.

Czar. *s.* [Polish form of the Russian title of the *Kaiser*, *Cæsar*, or Emperor. The *Polish* sound of *cz* is *ch*, i.e. *tsh*.] Title of the emperor of Russia.

There were competitors, the *czar* of Muscovy's son, the duke of Newburg, and the prince of Lorraine.—*E. Browne, Travels in Europe*, p. 153.

Russia refused to consent to anything more than an armistice for two years, which was afterwards enlarged into a peace for thirty years; as the *czar's* attention was in the commencement of the eighteenth century principally directed to schemes of aggrandisement at the expense of Sweden.—*Sir E. S. Creasy, History of the Ottoman Turks*, vol. iii. ch. iv.

Czarína. *s.* Female czar; empress of Russia.

When Catherine Alexowna was made empress of Russia, the women were in an actual state of bondage. . . . Assemblies were quite unknown among them; the *czarina* was satisfied with introducing them, for she found it impossible to render them polite.—*Goldsmith, Essays*, 22.

In the empress's manifestoes respecting the annexation of the Crimea, the Kuban, and the adjacent territories to Russia (which were published in April, 1783) the same spirit of grim hypocrisy was maintained with which Europe was already familiarised by the sayings and doings of the *czarina* and her confederates in the case of Poland.—*Sir E. S. Creasy, History of the Ottoman Turks*, vol. ii. ch. viii.

Czárish. *adj.* Relating to the czar.

And mark the progress of their work. *Swift.*

The story deserves the pen of my dear Smollett, who, I am sorry, disgraces his talent by writing

DACT

I. Walton.

The *Dace*, or, as it is sometimes called, the *Dare* or *Dart*, is a fish of the Cyprinidæ family, and is rather like the Roach both in habits and appearance, but the former is more local and less plentiful than the latter.—*Maunder, Treasury of Natural History*, p. 170.

Dáctyl. *s.* [Gr. δάκτυλος = finger.] Metrical measure so called, consisting of a long syllable followed by two short ones (– ∪ ∪), and, as such, comparable to a finger with its one longer and two shorter joints. *Cāndidŭs* in Latin, and the word δάκτυλος itself in Greek, are instances.

Dad, or Dáddy. *s.* [Welsh, *tad*; whence it is often considered a Keltic word: but it is also Frisian and Mesogothic.] Father.

I was never so bethumpt with words,
Since first I call'd my brother's father *dad*.
Shakespear, King John, ii. 2

His loving mother left him to my care;
Fine child, as like his *dad* as he could stare! *Gay.*

Dade. *v. a.* See extract.

[To *dade* is applied to the first vacillating steps of a child. To *dade* a child, to teach him to walk; *dading* strings, leading strings. It is in this sense that the word is used by Drayton. . . .

'Which nourished and brought up at her most plenteous pap
No sooner brought to *dade*, but from her mother trips.—
But eas'ly from her source as Isis gently *dades*.'

Decker, Whore of Babylon. (Nares by H. and W.)

[*Dag.—Dagger.—Daggle.* The syllable *dag* or *dig* represents the noise of a blow with something sharp, then the instrument with which the blow is given, or anything of similar form. Breton, *dagi*, to stab; Old English, *dag*, to pierce.

(Morte Arthure in Halliwell.)

Hence, *dag*, a fragment of a slashed edge, a jag or shred. *Dagge* of cloth, fractillus. (Promptorium Parvulorum.) *Dagon*, a slice. 'A *dagon* of your blanket, leve dame.' (Chaucer.) *Dag-locks*, clotted locks hanging in dags or jags at a sheep's tail. Finlandish, *takku*, a shaggy fleece; *takku-willa*, dag-wool; *takkuinen*, matted, shaggy, dagged. (Horman in Way.) *Daglets*, icicles, dags or jags of ice. In *daggle*, to trail in the dirt (Halliwell), *bedaggled, daggle-tail*, there is perhaps a mixture between the idea of hanging in *dags* in the wet and mire, and that of bedewing, soaking in the wet grass; Scotch, *dag*, dew, drizzling; Swedish, *dagg*, dew; Danish, *dugge, bedugge*, to dew, bedew; Devonshire, *dugged, dugged-tealed, daggle-tealed*, wet and with the tail of the garment dragged along in the dirt. Butler, Hudibras.

Dággle. *v. n.* [see Dag.] Draggle. (The idea of dragging connected with water, mire, or any other kind of impurity, lies at the bottom of this meaning. In the previous editions the definition is, 'dip negligently in mire or water; bemire; besprinkle:' the derivation connecting the word with *dag* or *dew*. In Brockett's list of North-Country words, *dag* = drizzle. *Daglock*, however, provincial for the befouled locks that hang about a sheep's tail, connects it with something hanging pendent, or swinging about as a tag).

Nor like a puppy, *daggled* through the town,
To fetch and carry sing-song up and down. *Pope.*

Dággletailed. *adj.* Clogged behind with water, mud, or filth.

Daguérreotype. *s.* [*Daguerre*, the inventor.] Photographic process so called: (used *adjectivally* in extract).

The *Daguerrotype* process depends on the production of a very thin film of iodine and silver, on the surface of a carefully-prepared silver plate. This compound is chemically changed by the radiations proceeding from any external object illuminated by the sun. The image is developed by the action of mercurial vapour, and, lastly, rendered permanent, as far as the action of light is concerned, by dissolving off the iodide of silver by hyposulphite of soda.—*Ure, Dictionary of Arts, Manufactures, and Mines.* (Hunt's ed.)

Dáhlia. *s.* [*Dahl*, a Swedish botanist.] Exotic plant so called, of the natural order Compositæ.

In *daily* thanks, that gave us such a prince.

Cease, man of woman born! to hope relief
From *daily* trouble and continued grief. *Prior.*

Daily. *adv.* [This is a word which may serve as a text upon the use of the termination *-ly* in *adverbs*; in which its use, though common, is by no means etymologically evident. However much *-ly* may look like a derivational element, it is in reality a separate term; so that the words in which it appears are really modified compounds, or, at any rate, compounds in respect to their original elements. The *-y* represents a *-g* or *-ig*, which is itself deduced from a *-k* (or *-c*), or an *-ik* (*-ic*); this being the older form of the adjective *like.*

The part of speech to which it naturally attaches itself is the substantive, which it converts into an adjective; as, *man, manlike, manlic, manlig, manly* = like a man. Out of this adjective the adverb arises; as, *tight, tightly, bright, brightly.* With the majority of adjectives no difficulty arises; none, at least, in respect to the form. But when, as in the word before us, the adjective already ends in *-ly*, the apparent necessity arises of either adding a second *-ly* (*dai-ly-ly*), or of leaving the two parts of speech identical in respect to their terminations. Against the first of these alternatives the practice of our language has decided, and that conveniently.

Yet it is doubtful whether the recognition of any second *-ly* (whether adopted or omitted) is necessary. In most, perhaps in all, languages where the adjectives have genders, the neuter is used adverbially, just as it is also used substantivally. Now in Anglo-Saxon this distinction of genders actually existed, and, along with it, the common practice of using the neuter as an adverb. From this point of view, then, the adverbial *daily* must be looked upon as what may be called a virtual neuter, a neuter which in an older stage of the language was a real one.] Every day; day by day.

Let that man with better sense advise,
That of the world least part to us is read;

Daínty. *adj.* [Welsh, *dantaidd* = delicate.—On the strength of this word, several influential authorities have looked upon *dainty* as a word of truly British origin; the more so as *danedd* = tooth is a British word, and the word under notice is non-existent in the other languages of the German family. On the other hand, the evidence of *daenteth* being original Welsh is imperfect, being complicated by Latin *dens, dentis*, and the French *dent.*]

[Middle Latin *damnum* was used to signify a fine imposed by legal authority. The term was then elliptically applied to the limits over which the right of a lord to the fines for territorial offences extended, and then to the inclosed field of a proprietor. ... 'Si quis caballum in *damnum* suum invenerit.' (Leges Luitprand in Ducange.) 'Exceptis averiis in alieno *damno* inventis.' (Magna Charta.) ... *Damage* then acquired the sense of trespass, intrusion into the close of another, as in the legal phrase *damage feasant*, whence French *damager*, to distrain or seize cattle found in trespass. ... From this verb was apparently formed the abstract *domigerium*, signifying the power of exacting a *damnum* or fine for trespass. 'Sub *domigerio* alicujus aut manu esse.' (Bracton.) Then as *damage* is written *damge* in the laws of W. the Conqueror, the foredoing *domigerium* and the corresponding French *domager* or *damager* would pass into *damger*, *danger*, the last of which is frequently found in the peculiar sense of *damnum* and *dommage* above explained. 'En ladite terre et ou *dangier* dudit sire trouva certaines bestes desdis habitans. Icelles bestes se boutèrent en un *dangier*, *ou paturage defendu*.' (Carp. A.D. 1373.)

'Narcissus was a bachélere
That Love had caught in his *daungere*,
(had caught trespassing in his close,)
And in his nette gan him so straine.' (R. R.)

The term *danger* was equally applied to the right of exacting a fine for breach of territorial rights, or to the fine or the rights themselves, and the officer whose duty it was to look after rights of such a nature was called *sergent dangereux*. ... To be in danger of any one, *estre en son danger*, came to signify to be subjected to any one, to be in his power or liable to a penalty to be inflicted by him or at his suit, and hence the ordinary acceptation of the word at the present day. 'In danger of the judgment—in danger of hell-fire.' As the penalty might frequently be avoided by obtaining the licence of the person possessed of the right infringed, the word was applied to such licence, or to exactions made as the price of permission. ... 'Judicatum est quod Johannes de Nevilla miles non potest vendere boscos suos de Nevilla sine licentia et *dangerio* regis.' (Judgment A.D. 1260.) ... The word then passed on both in French and English to signify difficulties about giving permission or complying with a request, or to absolute refusal. 'Et leur commanderent que si la roine fesait *dangier* que ils la sachassent (chassassent) à force hors de l'eglise.' 'Comme le tavernier faisoit *dangier* ou difficulté de ce faire.' (Carpentier.)

'With *danger* uttren we all our chaffare,
Gret prees at market maketh dere ware
And to gret chepe is holden at litel prise;
This knoweth every woman that is wise.'
(W. of Bath.)

i.e. we make difficulties about uttering our ware.

Was of his love so *dangerous* to me.' (Ib.)

'And thus the martial Erle of Mar
Marcht with his men in richt array—
Without all *danger* or delay
Came haistily to the Harlaw.' (Battle of Harlaw.)

Thus the genera Lamium and Galeopsis (*dead-nettle* and hemp-nettle) are each formed into a separate group in virtue of their general resemblances and differences, and not because the former has one tooth on each side of the lower lip, and the latter a notch in its upper lip, though they are distinguished by these marks.—*Whewell, History of Scientific Ideas*, ii. 137.

Dean. *s.* [Fr. *doyen*, from Lat. *decanus*, from *decem* = ten.] See extract.

As there are two foundations of cathedral churches in England, the old and the new, (the new are those which Henry VIII. upon suppression of abbeys transformed from abbot or prior, and convent, to *dean* and chapter,) so there are two means of creating these *deans*; for those of the old foundation are brought to their dignity much like bishops, the king first sending out his congé d'élire to the chapter, the chapter then chusing and the bishop confirming them, and giving his mandate to instal them. Those of the new foundation are, by a shorter course, installed by virtue of the king's letters patent, without either election or confirmation. This word is also applied to divers, that are chief of certain peculiar churches or chapels: as the *dean* of the king's chapel, the *dean* of the Arches, the *dean* of St. George's chapel at Windsor, and the *dean* of Bocking in Essex.—*Cowell.*

The *dean* and canons, or prebends, of cathedral churches, were of great use in the church; they were not only to be of counsel with the bishop for his revenue, but chiefly for government in causes ecclesiastical. Use your best means to prefer such to those places who are fit for that purpose.—*Bacon, Advice to Villiers.*

There are four sorts of *deans* and *deanries*, of which and of whom the law of this realm taketh knowledge. The first is a *dean* who hath a chapter, consisting of prebendaries or canons, subordinate to the bishop . . . the second is a *dean* who hath no chapter, and yet he is presentative, and hath cure of souls; he hath a peculiar and a court wherein he holdeth ecclesiastical jurisdiction; but he is not subject to the visitation of the bishop or ordinary: such is the *dean* of Battel in Sussex . . . the third *dean* is ecclesiastical also, but the *deanry* is not presentative, but donative, nor hath any cure of souls; and he hath also a court and a peculiar . . . such a *dean* is the *dean* of Arches, and the *dean* of Bocking in Essex . . . the fourth sort of *dean* is he who is usually called the rural *dean*; having no absolute judicial power in himself, but he is to order the ecclesiastical affairs within his *deanry* and precinct by the direction of the bishop or archdeacon, and is substitute for the bishop in many cases.—*Burn* (by *Phillimore*), *Ecclesiastical Law, Deans.*

Deáthsman. *s.* [In this combination the *s* is general, perhaps universal; forms like *deathman*, in which the *s* is omitted, being either rare or non-existent. In Death's-head, the awkwardness of [illegible]ience as *th*+*h* may be the [illegible] generality; while, in D[illegible]r, it prevents the contact of two dentals. Be this as it may, the form under notice is *not* that of an ordinary compound, but rather that of two words in an ordinary syntactic construction, i.e. a possessive case followed by a second substantive. As long as each word retains its accent, there is not even the appearance of a compound; and in *deáth's-héad* the accent is *generally* double. But, followed by another word, so as to give a *de*composite, the accent of the second element is often lost, e.g. in *déath's-head moth*: in which case we have a compound in *s*. No better instances of this compound can be given than in the names of the days of the week, i.e. in *Tue-s-day*, *Wedne-s-day*, and *Thur-s-day*, as contrasted with *Sun-day*, *Mon-day*, *Fri-day*, and *Satur-day*. Here we have, on the first view, a true syntactic concord between two words giving a compound according to the strictest application of the test of accent. But the origin of the *s* is equivocal. In most English words it is probably the sign of the possessive case, as the *s* in *father's*. But in the earlier stages of all the German languages a compound consisted not of *two* elements, but of *three*, viz. the two main words, and a connecting copula between them. In most cases this was a vowel, *o* or *i*; but in some it was the consonant *s*. That this was not the sign of the possessive case, but, though identical in sound, an independent form, is shown from several words in the allied languages where it follows substantives of which the possessive case *ended otherwise than in s*.

Over and above the theoretic views hereby suggested, there is the principle of a rule in spelling. With compounds of the kind under notice, except where the accent gives *two* words, the omission of the apostrophe in such words as *Tuesday*, *Wednesday*, and *Thursday* (rather than *Tue'sday*, *Wedne'sday*, and *Thur'sday*), is justifiable on the ground of etymology as well as convenience; and it is submitted that it is a rule which is advantageous to *all* words in which the accent gives a compound, the doctrine that the *-s* is the *-s* of the possessive case being by no means beyond doubt.] Executioner; hangman; headsman.

He's dead; I'm only sorry
He had no other *deathsman*.

He [Erskine] never appears to have given his whole mind to the practice of *debating*: he had a very scanty provision of political information; his time was always occupied with the laborious pursuits of his profession; he came into the House of Commons, where he stood among several equals, and behind some superiors, from a stage where he shone alone, and without a rival.—*Lord Brougham, Historical Sketches of Statesmen of the Reign of George III., Erskine.*

It signifies *decachord*, or instrument of ten strings.—*Hammond, Annotation on Psalm* xxxiii.

In the following extract the fuller though more foreign form in *-on* is the title of a book, and, as such, a *proper* rather than a *common* name.

A *Decacordon* of [illegible] quodlibetical questions concerning religion and [illegible]tate.—*Watson, Quodlibets of Religion and Sta[illegible]*

And so all t[illegible]rin[illegible] interpreters uniformly

render it; the LXXII., ἐν ψαλτήριον δεκαχόρδον, no a *decachord* psaltery.—*Ibid.*

Décad. *s.* [Gr. δέκας, δέκαδος = sum consisting of ten units; ten taken collectively; *a* ten, *the* ten, or *that* ten, as opposed to *ten* taken as so many *individual* numbers.] Sum of ten; its chief special application being,

a. To the *collection* of the *units* themselves.

The numerals are pronouns; being individual and variable. Logically, the ordinals are of earlier origin than the cardinals. The cardinals, however, seem to have been developed first. Their form is always simpler than that of the ordinals. Nevertheless they are abstract rather than concrete appellatives. The reasons for this lie in the connection between the names of the numbers and those of certain natural dualisms, triads, quaternions, *decads*, &c., the fingers being the chief.—*Dr. R. G. Latham, English Language, Preliminary Dissertation*, § 40.

b. To *years*: (as the ten decads into which a century (10×10) is divided).

Men were not only out in the number of some days, the latitude of a few years, but might be wide by whole olympiads, and divers *decades* of years.—*Sir T. Browne, Vulgar Errours.*

We make cycles and periods of years: as *decades*, centuries, and chiliads, chiefly for the use of computations in history, chronology, and astronomy.—*Holder, Discourse concerning Time.*

The last ten years of the fifteenth century were considerably more productive than any which had gone before. In the present *decad* [from A. D. 1501 to 1510] a striking decline was visible.—*Ibid.* pt. i. ch. iv. § 1.

c. To the *division* of a *book*: (*century* being not unfrequently used in the same manner: the terms, however, may be used without the one implying the other.

Works as irretrievably lost as the second *decad* of Livy.—*Macaulay, Miscellaneous Essays, Ranke's History of the Popes.*

d. To the *divisions* of an *army*, or any body of men: (in which case it sometimes does and sometimes does not imply a *century*).

All rank'd by ten; whole *decades*, when they dine,
Must want a Trojan slave to pour the wine.
Pope, Homer's Iliad.

Decádence. *s.* [see next entry.] Decay.

All that is subject under Nature's reign
In skies above, or on this lower round,
When it its long and far sought end hath found—
Doth in *decadence* fall, and slack remain.
Drummond, Miscellanies, no. 11. (Ord MS.)

Decádent. *adj.* [Both this and the preceding are coined words, and both are exceptionable in their construction. Their elements are Latin, viz., the preposition *de* = from, and the verb (or one of its derivatives) *cado* = fall; but, in Latin, when these two elements coalesce, the *a* in the second becomes *i*; so from *de* + *cadens*, and *de* + *cadentia*, the resulting compounds are *decidens* and *decidentia*.

Such being the case, the analogies of the compounds of *con-* and *co-* come under notice (see Co-, Con-temporary). These suggest the doctrine that the terms, instead of being introduced from the Latin as whole ready-made words, were made in England out of English words of Latin origin, viz. *cadent* and *cadence*. Of these words, however, the former, though it cannot be called non-existent, is rare; while the latter, though comparatively common as applied to music, elocution, and prosody, is not a common word in the primary and physical sense of *fall*; neither is *de-*, by any means, so separable and Anglicized a particle as *co-* from *con-*. The likeliest origin is the word *decay*; this having suggested the *a*, while the *d* was taken from the Latin.] Decaying.

But of those *decadent* ages in which no ideal either grows or blossoms . . . When belief and loyalty have passed away, and [illegible] and false echo of them remain; and al[illegible]ias become pageantry; and the creed o[illegible]s in authority has become one of two th[illegible]: an imbecility or a Machiavelism? Alas, of these ages World-History can take no notice.—*Carlyle, French Revolution*, pt. i. b. i. ch. ii.

The commands of God are clearly revealed both in the *Decalogue* and other parts of sacred writ.—*Hammond.*

Decámp. *v. n.* [Fr. *décamper.*] Shift, or change, camp or encampment; move or march off: (as, to decamp by night, or so as to escape the observation of an enemy, is a military stratagem, the word (with its derivatives), when applied generally, has often a *disparaging* import, suggesting secresy or fraud; as in such expressions as 'He *decamped* with the money').

Since it was determined not to fight, nothing was left but to take the step which Hume had recommended. There was a chance that, by *decamping* secretly, and hastening all night across heaths and morasses, the earl might gain many miles on the enemy, and might reach Glasgow without further obstruction.—*Macaulay, History of England*, ch. v.

Decámpment. *s.* Act of changing camp or encampment; marching or moving off.

Decampments arising from emergency . . . are commonly announced by beating to arms. . . . *Decampments* made for secret purposes, such as a night attack upon the enemy . . . are usually made without beat of drum.—*Rees, Cyclopædia*, in voce.

In North America, the season in which this takes place derives its name from that circumstance, and is universally called the Fall. In the division of *decimals* proceed in all respects as in the division of integers; and when the operation is done mark as many places in the quotient for *decimals* as with the number of *decimals* in the divisor are equal to the *decimal* places in the dividend.—*Rees, Cyclopædia*, in voce.

This kind of arithmetic . . . may be considered as the common arithmetical computation . . . in which the places of the figures change their value in a tenfold proportion, being ten times as much for every place more towards the left hand, and ten times less for every place more towards the right hand.—*Rees, Cyclopædia*, in voce.

It [England] had *decimated* itself for a question which involved no principle, and led to no result; and, perhaps, the history of the world may be searched in vain for any parallel to a quarrel at once so desperate and so unmeaning.—*Froude, History of England*, ch. xi.

Decimátion. *s.* Taking of every tenth.

1. Applied to *Tithes*.

The instating the tithes upon them was demonstratively as large a revenue to them, as, supposing an equal division, the remainder could be to any other tribe; yea, and larger too; as much as the twelve tenth parts which they received exceeded the nine that remained to each tribe after the *decimation*.—*Hammond, Works*, iv. 545.

2. In its *Military* sense; either *literally* or with a *general* import.

By *decimation* and a tithed death
Take thou the destined tenth.

Poetry, as in Greece, may have its distinct epochs in different forms, but it rarely, if ever, renews its youth. Hardly more than half a century contains all that is of the highest order in Latin poetry—Lucretius, Catullus, Virgil, Horace, the Elegiacs, Ovid. Even that noble *declamatory* verse, which in the best passages of Lucan, in Juvenal, and even in Claudian (this, with the philosophic and didactic poetry, Lucretius, Virgil, and the exquisite poetry of common sense and common life in Horace, the indigenous poetry of Rome), dies feebly out in the triumph of Christianity over Heathenism, as celebrated by Prudentius in his book against Symmachus.—*Milman, History of Latin Christianity*, b. xiv. ch. vi.

God is said not to have left himself without witness in the world, there being something fixed in the nature of men, that will be sure to testify and *declare* for him.—*South, Sermons.*

It is by taking the sentence *exactly* as it stands that the verb is treated as neuter; by supplying *self, opinion*, or some similar word, the construction becomes that of the preceding entry. Such, too, is the case with the colloquial expression, 'I *declare*:' a word, perhaps a sentence, but always a term expressive of something *declared*, is understood. The same applies to Decline = refuse; as in 'He *declined*.' There is something *declared* or *declined*. If expressed, the construction is decidedly active; if understood, it is ambiguous. More on this point is said in the Preface.

But because it is of the essence of the law that he who is to be obliged, be assured of the authority of him that declareth it, which we cannot naturally take notice to be from God, how can a man without supernatural revelation be assured of the revelations received from the *declarer?* and how can he be bound to obey them?—*Hobbes, Of Commonwealth*, pt. ii. ch. xxvi. (Rich.)

b. In the way of *exposition* or *explanation*.

But the fall, the rapid and total *declension*, of Wilkes's fame, the utter oblivion into which his very name has passed for all purposes save the remembrance of his vices—the very ruins of his reputation no longer existing in our political history—this affords also a salutary lesson to the followers of the multitude.—*Lord Brougham, Historical Sketches of Statesmen of the Reign of George III., Demagogue Arts, John Wilkes.*

2. In *Grammar*. Inflection of nouns.

Declension is only the variation or change of the termination of a noun, whilst it continues to signify the same thing.—*Clarke, Latin Grammar.*

The Peripateticks held it [the nominative] to be no case, and likened the noun in this its primary and original form to a perpendicular line A B.

The variations from the nominative they considered as if A B were to fall from its perpendicular, as, for example, to A C or A D. Hence, then, they only called these variations πτώσεις, casus, cases, or fallings. The Stoics, on the contrary, and the grammarians with them, made the nominative a case also. Words they considered (as it were) to fall from the mind or discursive faculty. Now when a noun fell thence in its primary form, they then called it πτῶσις ὀρθή, casus rectus, an erect or upright case or falling, such as A B, and by this name they distinguished the nominative. When it fell from the mind under any of its variations, as, for example, in the form of a genitive or dative, or the like, such cases they called πτώσεις πλάγιαι, casus obliqui, oblique cases, or sidelong fallings (such as A C or A D) in opposition to the other (that is A B), which was erect and perpendicular. Hence, too, grammarians called the method of enumerating the various cases of a noun κλίσις, declinatio, or *declension*, it being a sort of progressive descent from the noun's upright form through its various declining forms.—*Harris, Hermes*, b. ii. ch. iv.

3. In *Magnetism*. See Dip.

The *declension* of the needle was discovered A.D. 1492, by Columbus in his first voyage to America; and would have been highly alarming to any one but of his undaunted and philosophical turn of mind.—*Grainger, The Sugar Cane*, b. i. note. (Rich.)

Declínable. *adj.* In *Grammar*. Capable of being declined: (as a *noun*).

Howe the other *declynable* parts form their plurall numbers out of their singulars.—*Palsgrave, French Grammar*, b. iii: 1530.

The numbers, cases, modes, times, and other inflexions of the *declinable* parts of speech are also marked.—*Tyrwhitt, Essay on the Language and Versification of Chaucer.*

Declinátion. *s.* [Lat. *declinatio, -onis*, from *declino* = decline, i.e. go, or pass, down a slope, or in a sloping manner. *Declension* is a further modification of the same word.]

1. Descent; change from a better to a worse state; diminution of vigour; deterioration.

Two general motions all animations have, that is, their beginning and increase; and two more, that is, their state and *declination*.—*Sir T. Browne, Vulgar Errours.*

Hope waits upon the flow'ry prime;
And summer, though it be less gay,
Yet it is not look'd on as a time
Of *declination* or decay. *Waller.*

2. Oblique variation from some definite direction; oblique motion; obliquity.

a. Physical.

Supposing there were a *declination* of atoms, yet will it not effect what they intend; for then they do all decline, and so there will be no more concourse than if they did perpendicularly descend.—*Ray.*

b. Moral.

That a peccant creature should disapprove and repent of every *declination* and violation of the rules of just and honest, this right reason, discoursing upon the stock of its own principles, could not but infer.—*South, Sermons.*

3. In *Astronomy*. See extract.

Declination of a celestial object, in astronomy, is its angular or perpendicular distance from the equator, measured on a meridian, or great circle, passing through the object and the poles of the heavens. A great circle passing in this manner through the poles, (and therefore perpendicular to the equator) is called a circle of *declination*. *Declination* on the celestial globe corresponds with latitude on the terrestrial. And in the same manner as the geographical situation of a place is known when its longitude and latitude are given, so, in the heavens, the place of a star is determined when its right ascension and *declination* are known. To find, therefore, by observation the right ascension and *declination* of a heavenly body, is a problem of the first importance in astronomy.—*Rees, Cyclopædia*, in voce.

4. In *Dialling*. See extract.

Declination of a vertical plane, or wall, in dialling, is an arc of the horizon comprehended, either between the plane and the prime vertical circle, if you account it from east to west; or between the meridian and the plane, if you account it from north to south. There are many ways given by authors for finding the *declination* of planes: the most practicable way is by a *declinator*.—*Rees, Cyclopædia*, in voce.

Declinátor, or **Declínatory.** *s.*

1. In *Dialling*. Instrument by which the declination, reclination, and inclination of planes are determined.

Declinator, or *declinatory*, an instrument in dialling whereby the declination, inclination, and reclination of planes are determined.—*Rees, Cyclopædia*, in voce.

(See also last extract under preceding entry.)

2. One who declines to agree with another; dissentient. *Rare.*

The votes of the *declinators* could not be heard for the noise.—*Bishop Hacket, Life of Archbishop Williams*, pt. ii. p. 65.

Declínature. *s.* Act of one who declines in the sense of refusing.

The citizens of the United States will allow that such offers of a mediation may be declined in any special case, and no disrespect be implied in the *declinature*.—*Daily News*, Jan. 11, 1855.

Declíne. *v. n.*

1. Descend; fall off or away.

2. Turn aside; deviate.

The just man is hee that walketh in his integritie, and whose path is to *decline* from evill.—*Bishop Hall, Solomon's Ethick*, b. iii. § 1. (Ord MS.)

And now fair Phœbus 'gan *decline* in haste
His weary waggon to the western vale. *Spenser.*

And love-dejected eyes. *Thomson.*

2. Shun; avoid; refuse; be cautious of.

He had wisely *declined* that argument, though in their common sermons they gave it.—*Lord Clarendon.*

Could Caroline have been captivated with the glories of this world, she had them all laid before her; but she generously *declined* them, because she saw the acceptance of them was inconsistent with religion.—*Addison.*

As the squire said they could not decently *decline* his visit, he was shown up stairs, and paid his respects in the Scotch dialect, with much formality.—*Smollett, Expedition of Humphrey Clinker.*

3. Modify a word by varying its terminations; inflect.

You *decline* Musa, and construe Latin, by the help of a tutor, or with some English translation.—*Watts.*

Declíne. *s.*

Thy rise of fortune did I only wed,
From its *decline* determin'd to recede. *Prior.*

Those fathers lived in the *decline* of literature.—*Swift.*

The fair sex should be always fair; and no man,
Till thirty, should perceive there's a plain woman.

I know that some would fain postpone this era,
Reluctant as all placemen to resign
Their post; but theirs is merely a chimera,
For they have pass'd life's equinoctial line:
But then they have their claret and Madeira
To irrigate the dryness of *decline*;
And county meetings, and the parliament,
And debt, and what not, for their solace sent.
Byron, Don Juan, xiii. 3, 5.

Now, it appears evident that, in this extraordinary

person [Burke], the usual progress of men's faculties in growth and *decline* was in some measure reversed; his fancy became more vivid,—it burnt, as it were, brighter before its extinction; while age, which had only increased that light, lessened the power of profiting from it, by weakening the judgment as the imagination gained luxuriance and strength.—*Lord Brougham, Historical Sketches of Statesmen of the Reign of George III., Burke.*

2. In *Medicine*. See extract: (since the date of which the coincidence between Decline and Consumption has become less close; in the present Nosology, *atrophy* and *marasmus* being the nearest synonyms to Decline, *phthisis* to Consumption. In popular language the sense given in the extract still prevails).

Decline, in medicine, [is] a popular term applied to almost all chronic diseases in which the strength and plumpness of the body gradually decrease, untill the patient dies. The term is synonymous with consumption, and is more particularly applied to consumption of the lungs and the mesentery.—*Rees, Cyclopædia*, in voce.

Declíned. *part. adj.* (a *trisyllable* in the extract.) Fallen off.

O that the ocean did not bound our style
Within these strict and narrow limits so;
But that the melody of our sweet isle
Might now be heard by Tyber, Arne, and Po:
That they might know how far Thames doth outgoe
The music of *declined* Italy.
Daniel, Dedication to the Tragedy of Cleopatra.

Declíner. *s.* See extract.

Decliners, or declining dials, are those which cut either the plane of the prime vertical circle, or the plane of the horizon obliquely. If we conceive the plane of the prime vertical circle to revolve a little upon a right line drawn from zenith to nadir, the plane will become declining; nor will it be any longer cut at right angles by the meridian, but by some vertical circle passing through the intermediate points. After the like manner, a horizontal plane will be brought to decline, if, revolving on the meridian line, one part be raised a little towards the zenith, and the other depressed towards the nadir. —*Rees, Cyclopædia*, in voce.

Declíning. *part. adj.* Taking a downward direction; falling off; bringing decay: (one of its commonest conjunctions is with *years*, *age*, and the like, founded, as in 'the vale of life,' and similar expressions, on the notion of descent).

Thus then my lov'd Euryalus appears;
He looks the prop of my *declining* years! *Dryden.*
God, in his wisdom, hath been pleased to load our *declining* years with many sufferings, with diseases, and decays of nature.—*Swift.*

Declíning. *verbal abs.* Act of one who declines.

1. Falling off; deviation.

Those who are shaken and scandalized at God's order, ev'n in this which is one of the most seeming *declinings* of his equity, at the best, incur Oza's trespass of incredulitie, when he saw the oxen stumble, and the ark lean towards a fall.—*Mountague, Devoute Essays*, treat. iv. p. 11, s. 4. (Rich.)

2. In *Grammar*. Declension.

And a better and nearer example herein may be, our most noble queen, Elizabeth, who never toke yet Greeke or Latin grammar in her hand, after the first *declining* of a nowne and a verb.—*Ascham, The Schole Master.* (Rich.)

Declívity. *s.* [Lat. *declivitas*, *-atis*; from *de* = from, down, *clivus* = slanting, sloping.] Inclination or obliquity reckoned downward; gradual, not precipitous or perpendicular, descent.

Rivers will not flow unless upon *declivity*, and their sources be raised above the earth's ordinary surface, so that they may run upon a descent.—*Woodward.*

I found myself within my depth; and the *declivity* was so small, that I walked near a mile before I got to the shore.—*Swift, Gulliver's Travels.*

Decóct. *v. a.* [Lat. *decoctus*, part. of *decoquo*.] Boil down; digest in water: (in the second extract applied to digestion in the stomach, for which Concoct is the *commoner* term).

The longer malt or herbs are *decocted* in liquor, the clearer it is.—*Bacon, Natural and Experimental History.*

There she *decocts*, and doth the food prepare:
There she distributes it to ev'ry vein,
There she expels what she may fitly spare.
Sir J. Davies, On the Immortality of the Soul.

Decóction. *s.*

1. Act of boiling anything to extract its virtues.

In infusion, the longer it is, the greater is the part of the gross body that goeth into the liquor: but in *decoction*, though more goeth forth, yet it either purgeth at the top, or settleth at the bottom.—*Bacon, Natural and Experimental History.*

2. Preparation made by boiling in water: (opposed, in *Pharmacy*, to Infusion, where there is merely steeping).

If the plant be boiled in water, the strained liquor is called the *decoction* of the plant.—*Arbuthnot, On the Nature and Choice of Aliments.*

Decóllated. *part. adj.* Taken off by the neck.

A fine piece of a *decollated* head of St. John the Baptist was shewn to a Turkish emperor; he praised many things; but he observed one defect: he observed that the skin did not shrink from the wounded part of the neck.—*Burke, Philosophical Enquiry into the Origin of our Ideas of the Sublime and Beautiful*, introd.

Decollátion. *s.* [Lat. *decollatio*, *-onis*, from *collum* = neck.] Act of beheading; state of one beheaded: (used *metaphorically* in extract).

He, by a *decollation* of all hope, annihilated his mercy: this, by an immoderancy thereof, destroyed his justice.—*Sir T. Browne, Vulgar Errours.*

By a speedy dethroning and *decolling* of the king, and disinheriting his posterity, as the army remonstrants advise. — *Parliamentary History*, 24 *Charles I.* (Rich.)

Decolorátion. *s.* Loss or abstraction of colour.

Paleness . . . is the proper colour and badge of love: but by the way it is to be noted that we must not understand by this word pale, a simple *decoloration* or whiteness of the skin. — *Ferrand, Love Melancholy*, p. 121: 1640.

Decoloration [is] a term adopted from the French, signifying blanching or loss of the natural colour of any object.—*Hooper, Medical Dictionary.*

Decólour. *v. a.* Deprive of colour. See Discolour.

Decólouring. *part. adj.* Having the power to deprive anything of colour.

The discovery of the antiputrescent and *decolouring* properties of charcoal in general is due to Lowitz, of Petersburg; but their modifications have occupied the attention of chemists since his time. Kels published in 1798 some essays on the *decolouring* of indigo, saffron, madder, syrup, &c., by means of charcoal. . . . This *decolourising* power does not belong alone to bone black.—*Ure, Dictionary of Arts, Manufactures, and Mines, Bone Black.*

Decólouring. *verbal abs.* Abstraction, deprivation, or loss of colour.

(For example see extract, under preceding entry.)

Decólourize. *v. a.* Deprive of colour. See Discolour.

Decólourizing. *part. adj.* Decolouring.

The bleaching property of binoxide of hydrogen . . . of which oxygen is certainly the *decolorizing* principle, leaves little doubt of the accuracy of the foregoing explanation.—*Turner, Elements of Chemistry*, p. 271.

(See, also, extract under Decolouring.)

Decompósable. *adj.* Capable of being, or liable to be, decomposed.

We cannot be sure that these unpoisonous bodies agree with the poisonous substances in every property, except the particular one, of entering into a difficultly *decomposable* compound with the animal tissues.—*J. S. Mill, System of Logic*, iii. ix. 1.

These two substances are so unstable as to decompose at quite moderate temperatures; as that to which the outside of a joint of roast meat is exposed. Possibly it will be objected that some inorganic compounds, as phosphuretted hydrogen and chloride of nitrogen, are more *decomposable* than most organic compounds. — *Herbert Spencer, Data of Biology*, § 111.

Décompose. *v. a.* Resolve a compound into into its first principles; analyze.

The analytical legislators and constitution-venders are quite as busy in their trade of *decomposing* organization, in forming his grace's vassals into primary assemblies, national guards, &c.—*Burke, Letter to a Noble Lord.*

The chemical agency of the voltaic apparatus, to which chemists are indebted for a most powerful instrument of analysis, was discovered by Carlisle and Nicholson soon after the invention was made known in this country. The substance first *decomposed* by it was water. . . . It was in pursuing these researches that Davy made his great discovery of the decomposition of the alkaline earths, which till then had been regarded as elementary.—*Turner, Elements of Chemistry*, pp. 110, 111.

Décompose. *v. n.* Become decomposed.

Nitrous acid cannot exist if water be added to it; hypo-nitric acid is decomposed both by water and by contact with the various bases, and nitric acid . . . when anhydrous spontaneously *decomposes* . . . The various sugars and kindred bodies *decompose* at no very high temperatures. . . . And the alcohols, with their allies, have no great power of resisting decomposition. . . . How rapidly albumenoid matters *decompose* under ordinary conditions, is daily seen: the difficulty of every house-wife being to prevent them from decomposing. . . . These nitrogenized compounds, like the rest of their family, are remarkable for the rapidity with which they *decompose*; and the extensive changes produced by them in the accompanying oxy-hydro-carbons, are found to vary in their kinds according as the decompositions of the ferments vary in their stages. . . . Looking at the evidence thus brought together, do we not get an insight into the part played by nitrogenous matter in organic changes? We see that nitrogenous compounds in general, are extremely prone to *decompose*: their decomposition often involving a sudden and great evolution of force.—*Herbert Spencer, Data of Biology*, §§ 3—16.

Decómposite. *adj.* Compounded a second time; compounded with things already composite; triply, or more than triply, compounded; having a compound base or radical.

(For example see last extract under next entry.)

Decómposite. *s.* Anything decompounded. *Common* in *Chemistry*, and also applied in *Philology* to words.

Decomposites of three metals, or more . . . [to] long to inquire of, except there be some . . . tions of them already observed.—*Bacon, Physical and Medical Remains.*

Compound radicals like midship [in midshipman] and gentleman [in gentle-man-like] . . . the purposes of composition single words. . . . pounds wherein one element is compound are *decomposites*. . . . The *decomposite* character words is often concealed or disguised.—*Dr. Latham, English Language*, § 423: 1850.

Decomposition. *s.*

1. Analysis; act or process by which a compound body or substance is resolved into its elementary parts.

Not only chemical composition, but chemical *decomposition*, is capable of being similarly propagated. The peroxide of hydrogen . . . is held together by a chemical attraction of so weak a nature, that the slightest circumstance is sufficient to decompose it; and it even, though very slowly, gives off oxygen and is reduced to water spontaneously (being, I presume, decomposed by the tendency of its oxygen to absorb heat and assume the gaseous state). Now it has been observed, that if this *decomposition* of the peroxide of hydrogen takes place in contact with some metallic oxides, as those of silver, and the peroxides of lead and manganese, it superinduces a corresponding chemical action upon those substances. . . . Now no other explanation, [Liebig] observes, of these phenomena can be given, than that a body in the act of combination or *decomposition* enables another body, with which it is in contact, to enter into the same state.—*J. S. Mill, System of Logic*, iii. xiii. 1.

Speculation aside, however, that which it concerns us to notice, is the broad fact that light is an all-important agent of molecular changes in organic substances. It is not here necessary for us to ascertain how light produces these compositions and *decompositions*: it is necessary only for us to observe that it does produce them.—*Herbert Spencer, Data of Biology*, § 13.

2. Act of compounding things already compounded.

We consider what happens in the compositions and *decompositions* of saline particles.—*Boyle.*

The English, as Sir P. Sidney observeth, hath an elegant way of expressing them [epithets] much beyond the Latin, in a dextrous *decomposition* of two or three words together; as taste-pleasing fruits, high-erected thoughts.—*Instructions concerning Oratory*, p. 52: Oxford, 1682.

Decompoúnd. *v. a.* Compose of things already compounded; compound a second time; form by a second composition.

Nature herself doth in the bowels of the earth make *decompounded* bodies, as we see in vitriol, cinnabar, and even in sulphur itself.—*Boyle, Sceptical Chymist.*

When a word stands for a very complex idea, that

is compounded and *decompounded*, it is not easy for men to form and retain that idea exactly.—*Locke.*

If the violet, blue, and green be intercepted, the remaining yellow, orange, and red will compound upon the paper an orange; and then, if the intercepted colours be let pass, they will fall upon this compounded orange, and, together with it, *decompound* a white.—*Sir I. Newton, Opticks.*

Decómpound. *adj.* Decompounded.

The pretended salts and sulphur are so far from being elementary parts extracted out of the body of mercury, that they are rather, to borrow a term of the grammarians, *decompound* bodies, made up of the whole metal and the menstruum, or other additaments employed to disguise it.—*Boyle.*

Decómpound. *s.* Decomposite.

Congregational presbyteries, they are but natural presbyteries those others, they are but as stepdames, secondaries; they are but compounds and *decompounds* of the several presbyteries of presbyterial churches.—*Goodwin*, vol. iv. pt. iv. fol. 139. (Rich.)

No body should use any compound or *decompound* of the substantial verbs, but as they are read in the common conjugations.—*Arbuthnot and Pope, Martinus Scriblerus.*

Decompoúndable. *adj.* Capable of being decompounded.

It is impossible but speculative and devout minds, who are acquainted with the efficiency ascribed to the fluids of water, air, fire, and living spirits, in the sacred Scriptures and other writings of antiquity, must be struck with the recent discoveries of chemistry, which shew the universal dominion of air of different kinds, and that all nature seems to be *decompoundable* into fluidity.—*British Critic*, ix. 58.

Déccrate. *v. a.* Adorn.

For God I call to record, my harte was fully set and my mynde deliberately determined to have *decorated* this realme wyth wholesome laws, statutes, and ordinances.—*Hall, Edward IV.* 3rd year. (Rich.)

[He Charles Townsend] had not so great a stock as some have who had flourished formerly of knowledge long treasured up, he knew better by far than any man I was ever acquainted with, how to [illegible] together, within a short time, all that was [illegible]ary to establish, to illustrate, and to *decorate* that side of the question he supported.—*Burke, Speech on the American Taxation.*

[illegible]orátion. *s.* Ornament; embellishment; ed beauty.

[illegible]his helm and heavy buckler I can spare, only *decorations* of the war:
Mars is arm'd for glory, not for need. *Dryden.*
[illegible]he ensigns of virtues contribute to the ornament [illegible]figures; such as the *decorations* belonging to the liberal arts, and to war.—*Id., Translation of Dufresnoy's Art of Painting.*

Décorative. *adj.* Having a tendency to decorate, ornament, show, or set off anything; having an ornamental character.

Certain conirostral Cantores still practise in the undisturbed wilds of Australia the formation of marriage-bowers distinct from the later-formed nesting-place. The Satin Bower-bird and the Pink-necked Bower-bird are remarkable for their construction on the ground of avenues, over-arched by long twigs or grass stems, the entry and exit of which are adorned by pearly shells, bright-coloured feathers, bleached bones, and other *decorative* materials, which are brought in profusion by the male, and variously arranged to attract, as it would seem, the female by the show of a handsome establishment.—*Owen, Anatomy of Vertebrates*, ch. xxiii.

Décorator. *s.* One who decorates; artisan whose business is the decoration of houses.

They are careful *decorators* of their persons.—*Sir S. Raffles, History of Java.*

Decóre. *v. a.* Decorate. *Rare.*

It was to them a notable vertue to *decore* and beautifie the house of God, to the whiche appertained holynes, and to set a concorde in Christ's.—*Hall, Henry V.* 2nd year. (Rich.)

Decórement. *s.* [entered by Johnson as Decorament; upon which Todd remarks:

'From *decorate*, Dr. Johnson says; referring only to some dictionary for the existence of *decorament*. But the old word is *decorement*; and even *decoring* is used for *decorating*, in Heylin's Life of Archbishop Laud, p. 71.']

Ornament; ornamentation; embellishment. *Rare.*

Those *decorements* which beautify and adorn her.—*Heywood, Description of a Ship*, &c. p. 29: 1637.

Decórous. *adj.* [Lat. *decorus.*] Decent; [illegible]table to a character; becoming; proper; fitting; seemly.

Decórously. *adv.* In a decorous manner.

Had Marlborough been of a proud and vindictive nature, he might have been provoked into raising another quarrel in the royal family, and into forming new cabals in the army. But all his passions, except ambition and avarice, were under strict regulation. . . . He perfectly understood his own interest: he had perfect command of his temper: he endured *decorously* the hardships of his present situation, and contented himself by looking forward to a reversion which would amply repay him for a few years of patience.—*Macaulay, History of England*, ch. xxi.

Decórousness. *s.* Attribute suggested by Decorous.

The will of God is goodness, justice, and wisdom, *decorousness*, fitness.—*Cudworth, Intellectual System*, fol. 23.

Marlborough had been out of England during a great part of the time which his wife had spent in canvassing among the tories, and, though he had undoubtedly acted in concert with her, had acted, as usual, with temper and *decorum*.—*Macaulay, History of England*, ch. xv.

Decoúrt. *v. a.* Drive from a court; deprive of court influence. *Rare.*

It behoveth without doubt his majestie to uphold the duke against them, who, if he but *decourted*, it will be the cornerstone on which the demolishing of the monarchie will be builded.—*Cabbala, To his sacred Majestie, ab Ignoto.* (Rich.)

Decóy. *s.* (used also *adjectivally*, or as the *first element* in a *compound*.) [Dutch, *koye* = cage.]

1. Place for catching ducks.

A *decoy* is generally made where there is a large pond surrounded with wood, and beyond that a marshy and uncultivated country. . . . As soon as the evening sets in, the *décoy* rises (as they term it) and the wild fowl feed during the night. . . . The *decoy* ducks are fed with hempseed, which is flung over the skreens in small quantities to bring them forwards into the pipes, and to allure the wild fowl to follow, as this seed is light enough to float. There are several pipes (as they are called) which lead up a narrow ditch, that closes at last with a funnel net. Over these pipes (which grow narrower from the first entrance) is a continued arch of netting, suspended on hoops. It is necessary to have a pipe or ditch for almost every wind that can blow, as upon this circumstance it depends which pipe the wild fowl will take to, and the *decoy* man always keeps on the leeward side of the ducks. Along each pipe are placed, at certain intervals, skreens made of reeds, which are so situated that it is impossible the wild fowl should see the *decoy* man before they have passed on to the end of the pipe where the pursenet is placed. . . . The *decoy* ducks . . . lead the way. It often happens, however, that the wild fowl are in such a state of sleepiness and dozing that they will not follow the *decoy* ducks. Use is then generally made of a dog.—*Pennant, British Zoology*, vol. ii. pp. 259–261.

2. Trap; bait.

The devil could never have had such numbers, had he not used some as *decoys* to ensnare others.—*Dr. H. More, Government of the Tongue.*

There is likewise a sort of ducks, called *decoyducks* that will bring whole flights of fowl to their retirements, where are conveniences made for catching them.—*Mortimer, Husbandry.*

Decréase. *v. n.* [Lat. *decresco.*] Grow less; be diminished: (opposed to *increase*).

From the moon is the sign of feasts, a light that *decreaseth* in her perfection.—*Ecclesiasticus*, xliii. 7.

Unto fifty years the heart annually increaseth the weight of one drachm; after which, in the same proportion, it *decreaseth*.—*Sir T. Browne, Vulgar Errours.*

That might *decrease* their present store. *Prior.*

By weak'ning toil and hoary age o'ercome,
See thy *decrease*, and hasten to thy tomb. *Prior.*

2. Wane of the moon.

Decreáseless. *adj.* Suffering no decrease.

On the river's bank, in fabled lore,
The rustic stands; sees the stream swiftly go,
And thinks he soon shall find the gulph below
A channel dry, which he may safe pass o'er.

Volume *decreaseless* to the final hour.
Seward, Sonnets.

Decreátion. *s.* Undoing of an act of creation.

Decreément. *s.* Decree. *Rare.*

Décrement. *s.* [Lat. *decrementum*, from the root of *cre-sco* = grow; the opposite to *incrementum* = increase.] Decrease; diminution; amount lost.

Upon the tropick, and first descension from our solstice, we are scarce sensible of declination; but declining farther, our *decrement* accelerates: we set apace, and in our last days precipitate into our graves.—*Sir T. Browne, Vulgar Errours.*

Rocks, mountains, and the other elevations of the earth, suffer a continual *decrement*, and grow lower and lower.—*Woodward.*

But it [the theory of integrant molecules] still answered the purpose . . . of an instrument for calculating the geometrical relations of the parts of crystals to each other: for the integrant molecules were supposed to be placed layer above layer, each layer, as we ascend, decreasing by a certain number of molecules and rows of molecules; and the calculation of these laws of *decrement* was, in fact, the best mode then known of determining the positions of the faces. The theory of *decrements* served to express and to determine, in a great number of the most obvious cases, the laws of phenomena in crystalline forms, though the theory of integrant molecules could not be maintained as a just view of the structure of crystals.—*Whewell, History of Scientific Ideas*, ii. 83.

Decrépit. *adj.* [Lat. *decrepitus.*] Wasted and worn out with age.

Of men's lives, in this *decrepit* age of the world, many exceed fourscore, and some an hundred years.—*Sir W. Raleigh.*

The charge of witchcraft inspires people with a malevolence towards those poor *decrepit* parts of our species, in whom human nature is defaced by infirmity and dotage.—*Addison.*

Spelt with *d*, and generally so pronounced. That the spelling with *t* is the correct one is shown both by the Latin *decrepitus*, and the English Decrepitude. The similarity in sound of the last two syllables to the *-trepid* in *intrepid* has probably favoured the catachrestic pronunciation under notice.

Nor John Apple, whose withered rind, intrencht
With many a furrow, aptly represents
Decrepid age. *J. Philips, Cider.* b. i. (Rich.)

Last, winter comes, *decrepid*, old, and dull.

Decrétal. *adj.* Appertaining to a decree; containing a decree.

A *decretal* epistle is the law which the pope gives as an answer unto such persons as consult him about any matter relating to the church; and these decretals having obtained their authority in the Council of Rome, were introduced and received in the church even from the time of the eighth century, by laying aside almost all the canons of general councils.—*Ayliffe, Parergon Juris Canonici*, introd. xxii. (Ord MS.)

(See also under next entry.)

Of laws, of judgments, and of *decretals.* *Spenser.*

Traditions and *decretals* were made of equal force, and as authentical as the sacred charter itself.—*Howell, Vocall Forrest.*

The general supremacy effected by the Roman Church over mankind in the twelfth and thirteenth centuries derived material support from the promulgation of the canon law. The foundation of this jurisprudence is laid in the decrees of councils, and in the rescripts or *decretal* epistles of popes to questions propounded upon emergent doubts relative to matters of discipline and ecclesiastical œconomy. . . . After several minor compilations had appeared, Gratian, an Italian monk, published about the year 1140 his Decretum or general collection of papal epistles and sentences of fathers, arranged and digested into titles and chapters in imitation of the Pandects. . . . This work of Gratian . . . has been censured for notorious incorrectness as well as inconsistency, and especially for the authority given to the false *Decretals* of Isidore, and consequently to the papal supremacy. It fell, however, short of what was required in the progress of that usurpation. Gregory IX. caused the five books of *Decretals* to be published by Raymond de Peñafort in 1234. . . . These consist almost entirely of the rescripts issued by the later Popes, Alexander III., Innocent III., Honorius III., and Gregory himself. They form the most essential part of the canon law, the Decretum of Gratian being comparatively obsolete. . . . The study of this code became of course obligatory upon ecclesiastical judges. It produced a new class of legal practitioners or canonists; of whom a great number added, like their brethren the civilians, their illustrations and commentaries, for which the obscurity and discordance of many passages, especially in the Decretum, gave ample scope. . . . The canon law was almost entirely founded upon the legislative authority of the pope; the *decretals* are, in fact, but a new arrangement of the bold epistles of the most usurping pontiffs, and especially of Innocent III., with titles or rubrics, comprehending the substance of each in the compiler's language.—*Hallam, View of the State of Europe during the middle Ages*, ch. vii. p. 2.

Certain impostors had mixed themselves among the learned. There was a kind of parasites, who, like their ancestor in Terence, were for refining upon their profession, and from Nature's designation of simple buffoons had improved themselves into *dedicators*. Yet this coalition was not thought altogether monstrous; the parasite having as noble an origin, and suffering as base a degeneracy, as the *dedicator*. For the parasite, as the *dedicator*, was at first a name of honour.—*Bishop Warburton, Enquiry into the Causes of Prodigies and Miracles*, dedication.

Dédicatory. *adj.* Composing or constituting a dedication; complimental; adulatory: (often *postpositive*).

Dédicatory. *s.* Dedication: (the *commoner* term).

I conceive, readers, much may be guessed at the man and his book, what depth there is, by the framing of his title; which being in this remonstrant so rash and unadvised as ye see, I conceit him to be near akin to him who set forth a passion sermon with a formal *dedicatory* in great letters to our Saviour.—*Milton, Apology for Smectymnuus.*

Dedítion. *s.* [Lat. *deditio, -onis* = giving up.] Act of yielding up anything; surrender. *Rare.*

When once the criterion or perceptive faculty has lost its tenderness and sensibility, and the mind becomes reprobate, then darkness and light, good and evil, bitter and sweet are all one. Then . . . men are *dedolent* and past feeling; and having no other law but that of the corporeal life, become insatiable in impiety and work wickedness with greediness.—*Hallywell, Saving of Souls*, p. 114: 1677.

2. Deduce, in its application to a colony. *Rare.*

The Philippians are in the first part of Macedonia, as it is declared in the sixteenth of the Acts, a people *deducted* out of the citie of Philippos, so called of Philip the buyldour of it.—*Udall, Preface to the Philippians.* (Rich.)

Dedúction. *s.*

1. Subtraction; withdrawal; abatement.

Even with this *deduction* a candid consideration of M. Nodier's and Mr. Wedgwood's labours can hardly fail to convince [anyone] that the objection as to the paucity of actual onomatopœias is one which is wholly without weight.—*Farrar, Chapters on Language*, ch. xiii.

2. In *Logic*. In its strictest sense this word means inference of some particular or individual instance, as the conclusion of a syllogism, from premises of greater generality, in which it translates the Greek ἀναγώγη, and stands in contrast to Induction or ἐπαγώγη, where the inference is from the particular or individual to the general or universal; i.e. from the less to the more general.

All A's are B.
This C is A.
Therefore this C is B.

This is a typical formula; inasmuch as the first proposition, or major premiss, is as general as possible (i.e. universal), and the last as particular as possible (i.e. individual). Then, as effects are, for the most part, less general than their causes, deductive reasoning largely coincides with reasoning from cause to effect, which again is reasoning *à priori*. Reasoning from some general principle is of the same kind. Hence, as Discourse and Ratiocination are common synonyms for syllogistic

reasoning, they are also ynonyms for Deduction.

Necessary truths are proved, like arithmetical sums, by adding together the portions of which they consist. An inductive truth is proved, like the guess which answers a riddle, by its agreeing with the facts described. Demonstration is irresistible in its effect on the belief. . . . Inductive inference is not demonstrative, but it is often more striking than demonstrative reasoning. . . . *Deductive* truths are the results of relations among our own thoughts. Inductive truths are relations which we discern among existing things; and thus, this opposition of *deduction* and induction is again an aspect of the fundamental antithesis already spoken of.—*Whewell, History of Scientific Ideas*, pt. i. b. i. ch. i. § 3.

Social science . . . is a *deductive* science; not, indeed, after the model of geometry, but after that of the more complex physical sciences. It infers the law of each effect from the laws of causation on which that effect depends . . . by considering all the causes which conjunctly influence the effect, and compounding their laws with one another. Its method, in short, is the concrete *deductive* method; that of which astronomy furnishes the most perfect, natural philosophy a somewhat less perfect example. . . . Without dissembling the necessary imperfections of the à priori method when applied to such a subject, neither ought we, on the other hand, to exaggerate them. The same objections, which apply to the method of *deduction* in this its most difficult employment, apply to it, as we formerly showed, in its easiest; and would even there have been insuperable, if there had not existed, as was then fully explained, an appropriate remedy. This remedy consists in the process which, under the name of verification, we have characterized as the third essential constituent part of the *deductive* method; that of collating the conclusions of the ratiocination either with the concrete phenomena themselves, or, when such are obtainable, with their empirical laws. The ground of confidence in any concrete *deductive* science is not the à priori reasoning itself, but the accordance between its results and those of observation à posteriori. . . . M. Comte . . . looks upon the social science as essentially consisting of generalizations from history, verified, not originally suggested, by *deduction* from the laws of human nature. . . . I cannot but think that this truth is enunciated in too unlimited a manner, and that there is considerable scope in sociological inquiry for the direct, as well as for the inverse, *deductive* method. It will, in fact, be shown . . . that there is a kind of sociological inquiries to which, from their prodigious complication, the method of direct *deduction* is altogether inapplicable, while by a happy compensation it is precisely in these cases that we are able to obtain the best empirical laws. . . . We shall begin, then, by looking at the social science as a science of *deduction*, and considering what can be accomplished in it, and under what limitations, by that mode of investigation.—*J. S. Mill, System of Logic*, b. vi. ch. ix. § 1.

The discoveries which change the method of a science from experimental to *deductive*, mostly consist in establishing, either by *deduction* or by direct experiment, that the varieties of a particular phenomenon uniformly accompany the varieties of some other phenomenon better known. Thus the science of sound, which previously stood in the lowest rank of merely experimental science, became *deductive* when it was proved by experiment that every variety of sound was consequent on, and therefore a mark of, a distinct and definable variety of oscillatory motion among the particles of the transmitting medium. . . . But the grand agent for transforming experimental into *deductive* sciences, is the science of number. . . . The science of quantity being (as far as any science can be) altogether *deductive*, the theory of that particular kind of qualities becomes, to this extent, *deductive* likewise. The most striking instance in point which history affords (though not an example of an experimental science rendered *deductive*, but of an unparalleled extension given to the *deductive* process in a science which was *deductive* already,) is the revolution in geometry which originated with Descartes, and was completed by Clairaut.—*Ibid.*

Dedúctive. *adj.* Consisting in, or relating to, (logical) deduction.

The intellect of Black belonged to a class, which, in the eighteenth century, was almost universal in Scotland, but was hardly to be found in England, and which, for want of a better word, we are compelled to call *deductive*, though fully admitting that even the most *deductive* minds have in them a large amount of induction, since, indeed, without induction, the common business of life could not be carried on. But for the purposes of scientific classification, we may say, that a man or an age is *deductive*, when the favourite process is reasoning from principles instead of reasoning to them, and when there is a tendency to underrate the value of specific experience.—*Buckle, History of Civilization in England*, vol. ii. ch. vi.

(See also under preceding and following entries.)

Dedúctively. *adv.* In a deductive manner; consequentially; by regular deduction; by a regular train of ratiocination.

There is scarce a popular errour passant in our days, which is not either directly expressed, or *deductively* contained in this work.—*Sir T. Browne, Vulgar Errours*, i. 8.

It is evident, that their process is essentially inductive; it is a procedure from the observation of complex phenomena, up to the elements to which those phenomena are owing; it is, in other words, a study of natural effects, in order to learn the operation of natural causes. Very different was the process in Germany and Scotland. . . . The geological theory which [Werner] propounded, depended entirely on a chain of argument from cause to effect. He assumed, that all the great changes through which the earth had passed, were due to the action of water. Taking this for granted, he reasoned *deductively* from premisses with which his knowledge of water supplied him . . . The method adopted by Werner was evidently *deductive*, since he argued from a supposed cause, and reasoned from it to the effects. In that cause he found his major premiss, and thence he worked downwards to his conclusion, until he reached the world of sense and of reality. . . . Exactly the same process, on the same subject, and at the same time, was going on in Scotland. Hutton, who was the founder of Scotch geology, and who, in 1788, published his 'Theory of the Earth,' conducted the inquiry just as Werner did; though, when he began his speculations, he had no knowledge of what Werner was doing. The only difference between them was, that while Werner reasoned from the agency of water, Hutton reasoned from the agency of fire. . . . In obedience to the general mental habits of his country, he adopted the *deductive* method.—*Buckle, History of Civilization in England*, vol. ii. ch. vi.

1. That part of a complex term which limits the other part, the whole being used to convey in a fuller form the import of a simpler equivalent, is its *defining* part or *definition*. It is submitted that this, though somewhat different from the ordinary sense of the term, is not incompatible with it; and also that, whether it be so or not, it is the original and *etymological* meaning; i.e. the one, and the only one with which is properly connected the notion of *limit*, or *limitation*, conveyed by *finis*. This word, in a dictionary, is in a different category from words in general, inasmuch as it is one of the technical terms of lexicography. Hence, though more than usual will be said about it in the present notice, more still will appear in the Preface. Illustrations, also, are to be found under Connotation and Connote; Denotation and Denote; Description; Real and Nominal; and, more especially, Difference; with which last term the present view makes the word Definition nearly synonymous. If so, a definition is a part (the differentiating part) of a term, the term being the Predicate. But this limitation of import is so far from being adhered to in practice, that the word often means not only the whole term, but the whole proposition to which it belongs.

It is to be observed that the word *Definition* is sometimes used to denote the *whole sentence*, in which the term defined is conjoined with the explanation given of it; as when we say, 'a triangle is a three-sided figure:' sometimes it is used to signify merely *that which gives* the explanation; as when we say 'three-sided figure' is *the definition* of 'triangle.'—*Whately, Elements of Logic*, supplement to ch. i.

The present view, which is purely etymological, limits the *defining* part of the term to 'three-sided;' at any rate, in the Genus (as will be seen in the next section) the notion conveyed is that of extension rather than limitation.

2. In practice, however, the part gives its name to the whole, and the definition

consists of the Difference with the addition of the Genus, and, so doing, constitutes an entire Proposition. The italics in the following extracts are those of the original.

The '*logical-definition*' consists of the 'Genus' and 'Difference;' which are called by some writers the 'metaphysical' [ideal] parts; as being not two real parts into which an *individual*-object can (as in the former case) be actually divided, but only different views taken [notions formed] of a *class* of objects, by one mind. *E.g.* 'A Proposition' would (Genus.) (Difference.) be defined, logically, 'a sentence affirming-or-denying:' A 'Magnet' 'an Iron-ore having attraction for iron;' a 'Square,' a 'Rectangle' [right-angled parallelogram] having equal sides.—*Whately, Elements of Logic*, supplement to ch. i.

Most persons look for nothing more, in a *definition*, than a guide to the correct use of the term—a protection against applying it in a manner inconsistent with custom and convention. Anything, therefore, is to them a sufficient *definition* of a term, which will serve as a correct index to what the term *de*notes; although not embracing the whole, and sometimes, perhaps, not even any part of what it connotes. This gives rise to two sorts of imperfect, or unscientific *definition*; namely, Essential but incomplete *Definitions*, and Accidental *Definitions*, or Descriptions. In the former, a connotative name is defined by a part only of its connotation; in the latter, by something which forms no part of the connotation at all. An example of the first kind of imperfect *definitions* is the following: —Man is a rational animal. It is impossible to consider this as a complete *definition* of the word Man, since (as before remarked) if we adhered to it we should be obliged to call the Houyhnhms men; but as there happen to be no Houyhnhms, this imperfect *definition* is sufficient to mark out and distinguish from all other things, the objects at present denoted by 'man;' all the beings actually known to exist, of whom the name is predicable. . . . *Definitions* of this kind are what logicians have had in view, when they laid down the rule, that the *definition* of a species should be *per genus et differentiam*. Differentia being seldom taken to mean the whole of the peculiarities constitutive of the species, but some one of those peculiarities only, a complete *definition* would be *per genus et differentias*, rather than *differentiam*. It would include, with the name of the superior genus, not merely *some* attribute which distinguishes the species intended to be defined from all other species of the same genus, but *all* the attributes implied in the name of the species, which the name of the superior genus has not already implied.—*J. S. Mill, System of Logic*, i. viii. 3.

This notion would account for the rule that all *definition* must necessarily be *per genus et differentiam*, and would also explain why any one *differentia* was deemed sufficient. But to expound, or express in words, a distinction of Kind, has already been shown to be an impossibility: the very meaning of a Kind is, that the properties which distinguish it do not grow out of one another, and cannot therefore be set forth in words, even by implication, otherwise than by enumerating them all: and all are not known, nor ever will be so. It is idle, therefore, to look to this as one of the purposes of a *definition*: while, if it be only required that the *definition* of a Kind should indicate what Kinds include it or are included by it, any *definitions* which expound the connotation of the names will do this: for the name of each class must necessarily connote enough of its properties to fix the boundaries of the class. If the *definition*, therefore, be a full statement of the connotation, it is all that a *definition* can be required to be.—*Ibid.* i. viii. 4.

The following, I believe, is a complete *definition* of an elephant: An animal which naturally drinks by drawing the water into its nose, and then spirting it into its mouth.—*De Morgan, Formal Logic*, p. 36.

Thus far the *Definition* is truly *definitive* or *limiting*; denoting (rather than *con*noting) the object to which it refers; and that by placing it in a class and subjoining some single distinctive, differentiating, or limiting character, by which the particular division of that class is indicated.

3. But more properties than are necessary for the mere differentiation may be enumerated: in which case the latitude in the use of the term increases, and Definitions become either actual or approximate Descriptions.

Any *Definition* which goes *beyond* a 'nominal-*definition*,' i.e. which explains anything *more* of the nature of the thing than is implied in the name, may be regarded, strictly speaking, as, so far, a 'real-*definition*.' The very word '*Definition*' however is not usually employed in this sense; but rather, '*Description*.'—*Whately, Logic*, sup. to ch. i.

In the fuller discussion which Archbishop Whately has given to this subject in his later editions, he almost ceases to regard the *definitions* of names and those of things as, in any important sense, distinct. He seems . . . to limit the notion of a Real *Definition* to one which 'explains anything *more* of the nature of the thing than is implied in the name;' (including under the word 'implied,' not only what the name connotes, but everything which can be deduced by reasoning from the attributes connoted). Even this, as he adds, is usually called, not a *Definition*, but a Description; and (as it seems to me) rightly so called. A Description, I conceive, can only be ranked among *Definitions* when taken (as in the case of the zoological *definition* of man) to fulfil the true office of a *Definition*, by declaring the connotation given to a word in some special use, as a term of science or art; which special connotation of course would *not* be expressed by the proper *definition* of the word in its ordinary employment.—*J. S. Mill, System of Logic*, i. viii. 5, note.

Degénerate. *adj.*

1. Unlike one's ancestors; fallen from the virtue and merit of one's ancestors.

Degenerátion. *s.* Act or process by which anything degenerates; condition or state of that which has degenerated: (one of its chief special applications is in *Physiology*, where it means the condition of a tissue of which the vitality has become diminished, impaired, or perverted).

In plants, wherein there is no distinction of sexes, these transplantations are yet more obvious than they; as that of barley into oats, of wheat into darnell; and those grains which generally arise among corn, as cockle, aracus, ægilops, and other *degenerations*.—*Sir T. Browne, Vulgar Errours*, iii. 17.

There is one remarkable form of *degeneration*, however, which is common to nearly all the tissues, and which seems to occur as a normal alteration in many of them at an advanced period of life; this consists in the conversion of their albuminous or gelatinous materials into fat, thus constituting what is

known as Fatty *Degeneration*. That this change is not due to the removal of the normal components of the tissues, and the substitution of newly-deposited fatty matter in their place, but is (in most cases at least) the result of a real conversion of the one class of substances into the other, has been already pointed out. And there are certain facts which indicate that this kind of *degeneration* is a part of the regular series of processes by which tissues that have served their purpose in the economy are prepared for being removed by absorption.—*Dr. Carpenter, Principles of human Physiology*, § 593.

Degénerous. *adj.* Degenerate. *Rare.*

Deglutition. *s.* [Lat. *deglutitio, -onis* = swallowing down; from *deglutio* = swallow.] Act or power of swallowing.

When the *deglutition* is totally abolished, the patient may be nourished by clysters.—*Arbuthnot, On the Nature and Choice of Aliments.*

When the reduction of the food in the mouth has been sufficiently accomplished, it is carried into the pharynx, and thence propelled down the œsophagus into the stomach by a set of associated movements; which, taken together, constitute the act of *deglutition*. . . . The first stage in the process is the carrying back of the food until it has passed the anterior palatine arch; this, which is effected by the approximation of the tongue and the palate, is a purely voluntary movement. In the second stage the tongue is carried still further backwards, and the larynx is drawn forwards under its roots, so that the epiglottis is pressed down over the rima glottidis. . . . The third stage of the process, the propulsion of the food down the œsophagus, then commences, . . . is complet'd involuntarily. . . . The purely automatic nature of the act of *deglutition* is shown by the fact that no attempts on our own part will succeed in performing it really voluntarily. In order to excite it, we must supply some stimulus to the fauces. A very small particle of solid matter, or a little fluid (saliva, for instance), or the contact of the back of the tongue itself, will be sufficient; but without either of these, we cannot swallow at all. Nor can we restrain the tendency when it is thus excited by a stimulus; every one knows how irresistible it is, when the fauces are touched in any unusual manner; and it is equally beyond the direct control of the will in the ordinary process of eating, voluntary as we commonly regard this.—*Dr. Carpenter, Principles of human Physiology*, §§ 425, 426.

Degradation. *s.*

1. Deprivation of an office or dignity; loss or diminution of rank; humiliation.

The word *degradation* is commonly used to denote a deprivation and removing of a man from his degree.—*Ayliffe, Parergon Juris Canonici.*

2. Degeneracy; baseness.

So deplorable is the *degradation* of our nature, that whereas before we bore the image of God, we now retain only the image of men.—*South, Sermons.*

What all men of sound minds regarded as a state of great improvement, blessing the country with much happiness, freeing it from many abuses, and giving it precious hopes of liberty, he would have pronounced the height of misery and *degradation*. —*Lord Brougham, Historical Sketches of Statesmen of the Reign of George III., Mr. Burke.*

Degráde. *v. a.* [Lat. *gradus* = step, degree.]

1. Put one from his degree; deprive one of office, dignity, or title.

He should
Be quite *degraded*, like a hedgeborn swain,
That doth presume to boast of gentle blood.
Shakespear, Henry VI. Part I. iv. 1.

2. Lessen; diminish the value of.

Shalt thou, by descending to assume
Man's nature, lessen or *degrade* thine own?

All higher knowledge in her presence falls
Degraded. *Ibid.* viii. 551.

Degráde. *v. n.* In a *University*. Put oneself in the condition, for some particular purpose, of the possessor of a degree below the real one; descend from a higher to a lower degree.

Degráded. *part. adj.* Lowered in rank, dignity, or intellect.

In a handful of rude and bizarre traditions, in a few skulls of the very meanest and most *degraded* type, in here and there a gnawed fragment of human bones, in a few coarse and pitiable implements of bone and flint, what traces have we of that radiant and ideal prototoplast whom men have delighted to invest with purely imaginary attributes, and to contemplate as the common ancestor of their race?—*Farrar, Chapters on Language*, ch. iv.

Degrádement. *s.* Degradation. *Rare.*

So the words of Ridley at his *degradement*, and his letter to Hooper, expressly shew.—*Milton, Of Reformation in England.*

Degráding. *part. adj.* Causing, or consisting in, degradation; lowering.

The recognition of the long and feeble periods of animalism and ignorance is no more *degrading* to humanity than the remembrance of the time when he was rocked and swaddled and dandled in a nurse's arms is a degradation to any individual man.—*Farrar, Chapters on Language*, ch. iv.

Degrádingly. *adv.* In a degrading manner; disparagingly.

This is what Bishop Taylor *degradingly* calls virtue and precise duty. — *Coventry, Philemon* conv. i.

Degreé. *s.* [Fr. *degré*; Lat. *gradus.*]

1. Rank.

Surely men of low *degree* are vanity, and men of high *degree* are a lie: to be laid in the balance, they are altogether lighter than vanity.—*Psalms*, lxii. 9.

I embrace willingly the ancient received course and conveniency of that discipline, which teacheth inferior *degrees* and orders in the church of God.—*Hooker, Ecclesiastical Polity*, dedication.

In an *academic* sense.

Let the study of logic, it was urged, be made optional to those who are merely candidates for a *degree*, but indispensable to the attainment of academical honours. . . . To this it was replied, that it was most desirable that no one should be allowed to obtain the *degree* of B.A. without a knowledge of logic.—*Whately, Elements of Logic*, preface.

2. Measure of an attribute, quality, or relationship.

If all the parts are equally heard as loud as one another, they will stun you to that *degree*, that you will fancy your ears were torn in pieces.—*Dryden.*

The second, third, and fourth *degrees* of heat are more easily introduced than the first: every one is both a preparative and a step to the next.—*South.*

Marriages were forbidden not merely within those limits which nature, or those inveterate associations which we call nature, have rendered sacred, but as far as the seventh *degree* of collateral consanguinity computed from a common ancestor. . . . In the eleventh century an opinion began to gain ground in Italy, that third cousins might marry, being in the seventh *degree* according to the civil law. Peter Damian, a passionate abettor of Hildebrand and his maxims, treats this with horror, and calls it heresy. Gregory I. pronounces matrimony to be unlawful as far as the seventh *degree*, and even, if I understand his meaning, as long as any relationship could be traced. The fourth Lateran Council in 1215 removed a great part of the restraint, by permitting marriages beyond the fourth *degree*, or what we call third cousins, and dispensations have been made more easy when it was discovered that they might be converted into a source of profit.—*Hallam, View of the State of Europe during the middle Ages*, ch. vii. pt. 2.

Opposed to Kind.

Passing over . . . the arrogant assumption which runs through such vast portions of human reasoning, that everything appertaining to men must differ in kind no less than in *degree* from its analogon among brutes, we may observe that the naturalness of interjections . . . is in fact one of their chief glories.—*Farrar, Chapters on Language*, ch. viii.

3. In *Geometry*. Three hundred and sixtieth part of the circumference of a circle: (the space of *one degree* in the heavens is accounted to answer to *sixty miles* on earth).

In minds and manners, twins oppos'd we see;
In the same sign, almost the same *degree*. *Dryden.*
To you who live in chill *degree*,
As map informs, of fifty-three. *Id.*

4. In *Meteorology*. See Graduated.

By degrees. Gradually; by little and little.

Their bodies are exercised in all abilities both of doing and suffering, and their minds acquainted *by degrees* with danger.—*Sir P. Sidney.*

Sacrilege . . . is the unjust violation, alienation, or *dehonestation* of things truly sacred, &c.—*Id., Anti-Baal-Berith*, p. 464.

Dehórt. *v. a.* [Lat. *dehortor.*] Dissuade; advise to the contrary. *Rare.*

The text you see is a *dehortatory* charge to avoid the offence of God.—*Bishop Hall, Remains*, p. 103.

Deificátion. *s.* Making of God; apotheosis; excessive praise.

There is a little mollification used to reduce the forenamed apotheosis and *deification* within the compass of sense.—*Fotherby, Atheomastix*, p. 290.

[He] ran into *deifications* of my person, pure flames, constant love, eternal raptures, and a thousand other phrases drawn from the images we have of heaven, which all men use for the service of hell, when run over with uncommon violence.—*Tatler*, no. 33.

Buddha being in fact a *deification* of human intellect, the philanthropy of the system extends its participation and advantages to the whole family of mankind.—*Sir J. E. Tennent, Ceylon*, pt. iv. ch. xi.

Déified. *part. adj.* Raised to the rank of a deity.

Some, such as Kattregam and Pattine, are borrowed from the mythology of the Brahmans; some are the genii of fire and other elements of the universe, and others are *deified* heroes.—*Sir J. E. Tennent, Ceylon*, pt. iv. ch. xi.

Déifier. *s.* One who, or that which, deifies; one who treats that which is not God as God; idolater.

One would have hoped that the memory of so signal an interposition of Heaven [the Flood] against the first *deifiers* of men, should have given an effectual check to the practice for some considerable time to the succeeding world.—*Coventry, Philemon*, conv. 3.

Déiform. *adj.*

1. Having the form of God.

But if the final consummation
Of all things make the creature *deiform*,

That thence need fear to come to any harm.
Dr. H. More, Song of the Soul, iv. 25.

2. Conformable to the divine will.

He [Whichcot] studied to raise those who conversed with him to a nobler set of thoughts, and to consider religion as a seed of a *deiform* nature; to use one of his own phrases.—*Bishop Burnet, History of his own Time.*

When our minds shall perceive what a pure imitation of God its life is, and how exactly *deiform* all its actions and motions, with what ravishing pleasure will they even review their own motions, which, being immediately copied from the nature of God, will be such as severest reason will be always forced to command.—*Scott, Christian Life*, i. 3.

Deiformity. *s.*

1. Quality of possessing, or exhibiting, the form of a deity.

Thus the soul's numerous plurality
I've proved, and shewed she is not very God;
But yet a decent *deiformity*

2. Conformity to the divine will.

Déify. *v. a.* [Fr. *déifier*; Lat. *Deus* = God, and *fio* = become, which here, as in so many other words, has an active sense, meaning *make*.]

1. Make a god of; adore as a god; transfer into the number of the divinities.

The seals of Julius Cæsar, which we know to be antique, have the star of Venus over them, though they were all graven after his death, as a note that he was *deified*.—*Dryden*.

Deism, or the principles of natural worship, are only the faint remnants or dying flames of revealed religion in the posterity of Noah.—*Dryden*.

In the works of Plotinus we have the philosophy of the Greeks, freed from their mythology, taking up the form of a philosophical religion, a *deism* accompanied with a pure and high-toned morality, but clouded in all the darkness of metaphysics.—*Sharpe, History of Egypt.*

Déist. *s.* One who acknowledges the existence of God, but denies a revelation: (as such opposed to a *Christian*. As opposed to the denier of a God, whether *Atheist* or *Pantheist*, a Deist is generally denominated Theist, the two terms, in Latin and Greek, translating one another).

In the second epistle of St. Peter, certain *deists*, as they seem to have been, laughed at the prophecy of the day of judgment.—*Bishop Burnet.*

The word *deist* or *theist*, in its original signification, implies merely the belief of a God, being opposed to *atheist*, and so there may be *deists* of various kinds, according to their respective religions which they receive over and above that prime article. There may be Pagan *deists*, and Jewish *deists*, and Mahometan *deists*, and Christian *deists*; meaning such persons as respectively embrace those several religions, above the belief of a God. But those who reject all traditional religions, and yet profess to believe in God, are merely *deists*, or emphatically such without any additional epithet to distinguish them; or, if an epithet must be added, they should be called Epicurean *deists*, or Infidel *deists*, or something of the kind. To call them Christian *deists* is a great abuse of language; unless Christians were to be distributed into two sorts, Christians and No-Christians, or Christians and Anti-Christians.—*Waterland, Christ vindicated against Infidelity*, p. 63.

Deistical. *adj.* Belonging to, savouring of, or consisting in, the doctrine of the deists.

Weakness does not fall only to the share of christian writers, but to some who have taken the pen in hand to support the *deistical* or antichristian scheme of our days.—*Watts.*

For what reason could the same *deity* be denied unto Laurentia and Flora which was given to Venus?—*Sir W. Raleigh.*

Tennent, Ceylon*, pt. iv. ch. xi.

Delph. *s.* Same as Delf.

Délta. *s.* [name of the fourth letter in the Greek alphabet; in Hebrew, *Daleth*: its form, as a *capital*, being Δ; i.e. either an equilateral or an isosceles triangle. Its chief special application is in Physical Geography and Geology, which it has taken from the shape of the block of land enclosed between the first and last of the seven mouths of the Nile, which the Greeks called the Delta (the approximate triangle being viewed from the sea) of the Nile. It has since been extended to the land at the mouths of other rivers, in some of which the likeness to the letter is scarcely to be recognized; indeed where it means little more than alluvial deposit.] Strand or alluvial land enclosed within the forks of a river and the sea, which forms its base.

Before the Restoration scarcely one ship from the Thames had ever visited the *Delta* of the Ganges. But, during the twenty-three years which followed the Restoration, the value of the annual imports from that rich and populous district increased from eight thousand pounds to three hundred thousand.—*Macaulay, History of England*, ch. xxiii.

I, waking, view'd with grief the rising sun,
And fondly mourn'd the dear *delusion* gone. *Prior.*

Who were the chief *demagogues* and patrons of tumults, to send for them, to flatter and embolden them.—*Eikon Basilike.*

Demosthenes and Cicero, though each of them a leader, or, as the Greeks called it, a *demagogue*, in a popular state, yet seem to differ in their practice.—*Swift.*

No schoolman could be a great man but as a schoolman. William of Ockham alone was a powerful *demagogue*—scholastic even in his political writings, but still a *demagogue*.—*Milman, History of Latin Christianity*, b. xiv. ch. iii.

Dr. Grantley, however, has a holy horror of the impious *demagogue*, as on one occasion he called Bold. . . . Now, I will not say that the Archdeacon is strictly correct in stigmatizing John Bold as a *demagogue*, for I hardly know how extreme must be a man's opinions before he can be justly called so: but Bold is a strong reformer.—*A. Trollope, The Warden*, ch. ii.

I will notice first some Greek immigrations, the time of whose incoming may in this way be pretty accurately noted; but which have either escaped the attention of our lexicographers, or have seemed to them unworthy of note. We should scarcely suspect 'biography' to be so recent as it is, were it not for the fact that Dryden continually uses 'biographia.' 'Cynosura,' employed by Hacket and Henry More, preceded 'cynosure;' '*demagogi*,' employed also by Hacket, went before '*demagogues*.' Bearing out the novelty of this last word in the middle of the seventeenth century, let me just remind you that Milton in his Εἰκονοκλάστης finds in the use of '*demagogue*' in the Icon Basilike.—'this goblin word,' as he calls it,—an argument that King Charles could not have been author of the work. His words are so curious that, though quote by Richardson and referred to by Todd, I will appe them here:—'Setting aside the affrightment of goblin word (*demagogue*), for the king, by his lea cannot coin English as he could money to be curren and it is believed this wording was above his knowr style and orthography, and accuses the whole composure to be conscious of some other author.' § 4.—*Archbishop Trench, On some Deficiencies in ou English Dictionaries*, p. 26, and note.

Demánd. *v. a.* [Fr. *demander*.]

Will you, I pray, *demand* that *demi-devil*,
Why he hath thus ensnar'd my soul and body?
Shakespear, Othello, v. 2.

And when Uriah was come unto him, David *demanded* of him how Joab did, and how the people did, and how the war prospered.—2 *Samuel*, xi. 7.

My bookseller tells me, the *demand* for those my papers increases daily.—*Addison, Spectator*.

4. In *Law*. See extract.

It hath also a proper signification distinguished from plaint; for all civil actions are pursued either by *demands* or plaints, and the pursuer is called demandant or plaintiff. There are two manners of *demands*, the one of deed, the other in law: in deed, as in every præcipe, there is express demand: in law, as every entry in land-distress for rent, taking or seizing of goods, and such like acts, which may be done without any words, are *demands* in law. —*Blount*.

Demándable. *adj.* Capable of being, or liable to be, demanded, requested, or asked for.

Demándant. *s.* One who demands; demander: (this latter being the *commoner*, the other the more *technical* or *legal* term).

One of the witnesses deposed, that dining on a Sunday with the *demandant*, whose wife had sat below the squire's lady at church, she the said wife dropped some expressions, as if she thought her husband ought to be knighted.—*Spectator*.

Demánder. *s.* One who demands; purchaser.

They grow very fast and fat, which also bettereth their taste, and delivereth them to the *demander's* ready use at all seasons.—*Carew, Survey of Cornwall*.

Demarcátion. *s.* [*mark*, in the sense of *march* = boundary.] Distinction.

The speculative line of *demarcation*, where obedience ought to end, and resistance must begin, is faint, obscure, and not easily *definable*.—*Burke, Reflections on the French Revolution*.

Having, by these eliminations, obtained the body which practically constitutes the people, we have next to consider whether the distinction between aristocracy and democracy turns upon a precise *demarcation* of the majority and minority of this body.—*Sir G. C. Lewis, On the Influence of Authority in Matters of Opinion*, appendix.

Demárch. *s.* ? Excursion.

Reason checks fancy in its most extravagant sallies, and imagination enlivens reason in its most extravagant *demarches*.—*Collection of Letters in the London Journal*, 1721, no. 10.

Demeán. *s.* Mien; presence; carriage; demeanour; deportment.

At his feet, with sorrowful *demean*,
And deadly hue, an armed corse did lie.
Spenser, Faerie Queen, ii.

Demeán. *v. a.* [from Fr. *démener*.—see last extract.] Behave; comport: (with *self*).

Those plain and legible lines of duty requiring us to *demean ourselves* to God humbly and devoutly, to our governors obediently, and to our neighbours justly, and to ourselves soberly and temperately.—*South, Sermons*.

A man cannot doubt but that there is a God; and that, according as he *demeans himself* towards him, he will make him happy or miserable for ever.—*Archbishop Tillotson, Sermons*, i.

Strephon had long perplex'd his brains,
How with so high a nymph he might
Demean himself the wedding-night. *Swift*.

[*Demean*.—To wield, to manage; *demeanour*, behaviour.

'So is it not a great mischaunce
To let a foole have governaunce
Of things that he can not *demaine*.'
(Chaucer in Richardson.)

'His herte was nothing in his own *demain*.'
(Ibid.)

'Come on with me, *demeane* you like a maide.'
(Ibid.)

French, *démener, se démener*, to stir much, move to and fro;—*un procès*, to follow a suit;—*marchandise*, to traffic. *Mener*, to conduct, lead, manage, handle;—*les mains*, to lay about one;—*la loi*, to proceed in a suit. (Cotgrave.) Italian, *menare*, to guide, conduct, direct, or bring by the hand, to bestir. (Florio.) The later Latin had *minare*, to drive cattle, derived by Diez from *minari*, to threaten; 'asinos et equum sarcinis onerant et *minantes* baculis exigunt.' (Apuleius.) 'Agasones equos agentes, i.e. *minantes*. (Paulus ex Festo.) But the notion of threatening does not seem to me to be a point of view from which the act of driving beasts would be likely to be named. On the other hand the Old French spelling, *mainer*, suggests an obvious derivation from Latin *manus*, French *main*, the hand, as we speak of handing one down-stairs; and *mener* is often synonymous with *manage*, which is undoubtedly from that source. Observe the frequent references to the hand in the explanations from Cotgrave and Florio above given. The same change of vowel is seen in French *menottes*, handcuffs.—*Wedgwood, Dictionary of English Etymology*.]

Demeán. *v. a.* [from *mean*.] Lessen; debase; undervalue.

Now, out of doubt, Antipholis is mad;
Else he would never so *demean* himself.

Demeánour. *s.* Carriage; behaviour.

To whom thus Eve, with sad *demeanour* meek,
Ill worthy I, such title should belong
To me transgressor. *Milton, Paradise Lost*, xi. 162.

Admiration, esteem, &c. are more the result of a judgment of the understanding; (though often of an erroneous one;) 'deference' is apt to depend on feelings;—often, on whimsical and unaccountable feelings. It is often yielded to a vigorous claim,—to an authoritative and overbearing *demeanour*. With others of an opposite character, a soothing, insinuating, flattering, and seemingly submissive *demeanour* will often gain great influence. They will yield to those who seem to yield to them; the others, to those who seem resolved to yield to no one.—*Whately, Elements of Rhetoric*, pt. i. ch. i. § 2.

Mary was in agonies of grief; and her distress affected him more than was imagined by those who judged of his heart by his *demeanour*.—*Macaulay, History of England*, ch. xv.

The men, as usual, liked her artless kindness and simple refined *demeanour*.—*Thackeray, Vanity Fair*.

Dr. Grantley never lays aside that *demeanour* which so well becomes him. He has all the dignity of an ancient saint with the sleekness of a modern bishop; he is always the same; he is always the archdeacon; unlike Homer, he never nods.—*A. Trollope, The Warden*, ch. ii.

Démency. *s.* See Dementia.

The king his clemency
Dispenseth with his *demency*. *Skelton*.

Mr. Pinel arranged mental diseases into—1st, Mania; . . . 2nd, Melancholia; 3rd, *Demency*, or a peculiar debility of the operations of the understanding, and the acts of the will; . . . and 4th, Idiotism.—*Copland, Dictionary of Practical Medicine*.

Deméntate. *v. a.* Afflict with dementia; madden. *Rare.*

Deméntate. *adj.* Afflicted with dementia; dementated; maddened. *Rare.*

Deméntedness. *s.* Attribute suggested by Demented.

It is named by Pinel dementia or démence, *dementedness*.—*Prichard*, in *Cyclopædia* (*Forbes, Tweedie, and Conolly*) *of Practical Medicine*.

Deméntia. *s.* [Lat. *de* = from, and suggesting the notion of deflection, deterioration, or change for the worse, and *mens, mentis* = mind; the French form being *démence*. To this *demency* stands in the same relation as *clemency* to *clémence*, Lat. *clementia*. In *Nosology*, *demency* is little more than an imperfectly Anglicized form of the French or Latin, which has not become current. Nor is it necessary; *dementia*, like *delirium*, being a word which is rarely used except in the singular number. The meaning of this word, at least in *Nosology*, is more special than those of its congeners. *Demented*, and the like, nearly coincide with *out of* (*one's*) *mind*, or *deranged*, i.e. mad in the looser sense of the term. *Dementia*, on the other hand, applies to the weakening, the breaking-down, and the partial, or incipient, loss of the faculties, i.e. the first stage of Fatuity.] Idiotcy.

We shall divide maniacal fatuity into two grades or stages. The first is that which Esquirol and Georget have named *démence* or *dementia*, a term which is established by the authority of these writers, and has been received into general use. . . . The approach of *dementation*, or the first period of fatuity, is indicated by a comparative state of calmness. . . . *Demented* persons are generally quiet and inactive.—*Prichard*, in *Cyclopædia* (*Forbes, Tweedie, and Conolly*) *of Practical Medicine*.

From men of royal siege; and my *demerits*
May speak, unbonneting, to as proud a fortune
As this that I have reach'd.
Shakespear, Othello, i. 2.

Demésne. *s.* (pronounced *demain*.) See extracts, also Domain.

Having now provided
A gentleman of noble parentage,
Of fair *demesnes*, youthful, and nobly allied.
Shakespear, Romeo and Juliet, iii. 5.

That earldom indeed had a royal jurisdiction and seigniory, though the lands of that county in *demesne* were possessed for the most part by the ancient inheritors.—*Sir J. Davies, Discourse on the State of Ireland*.

Demains, according to common speech, are the lord's chief manor-place, with the lands thereto belonging, *terræ dominicales*, which he and his ancestors have from time to time kept in their own manual occupation, for the maintenance of themselves and their families; and all parts of a manor

except what is in the hands of freeholders, are said to be *demains*. . . . As *demains* are lands in the lord's hand, manually occupied, some have thought this word derived from *de manu*; but it is from the French *demaine* which is used for an inheritance, and that comes from *dominium*.—*Blount.*

Domanium properly signifies the king's land in France, appertaining to him in property; and in like manner do we in some sort use it here in England; for all lands, it is said, are either mediately or immediately held of the crown . . . it hath been observed that lands in the hands of a common person cannot be true *demesnes*; and certain it is that lands in the possession of a subject are called *demains* in a different sense from the *demain* lands of the crown; for *demains* or *domains* in the hands of a subject have their derivation *à domo*; because they are lands in his possession for the maintenance of his house; but the *domains* of the crown are held of the king, who is absolute lord, having proper *dominion*.—*Wood, Institutes*, 139.

That land which a man holds originally of himself, called *dominium* by the civilians, and opposed to feodum or fee, which signifies those that are held of a superior lord. It is sometimes used also for a distinction between those lands that the lord of the manor has in his own hands, or in the hands of his lessee, demised or let upon a rent for a term of years or life, and such other lands appertaining to the said manor as belong to free or copyholders; although the copyhold belonging to any manor, according to many good lawyers, is also accounted *demeans*.—*Philips.*

Demíss. *adj.* Let down; depressed; submissive; humble.

Neither is humility a vertue made up of wearing of old clothes, or doing servile and mean employments by voluntary undertaking, or of sullen gestures, or *demiss* behaviour, and artifice of lowly expressions; for these may become snares to invite and catch at honour, and they are collateral designs of pride and direct actions of hypocrisie.—*Jeremy Taylor, Great Exemplar of Sanctity and holy Life*, 365. (Ord MS.)

Demíssion. *s.* [Lat. *demissio, -onis*; from *demissus*, passive part. of *demitto* = send away.] Letting down: (opposed to *keeping up*).

The majority, having the whole power of the community, may employ all that power in making laws, and executing those laws; and there the form of the government is a perfect *democracy*.—*Locke.*

In . . . the preceding essay, the democratic form of government, and the power of the majority of the people, as characteristic of that form, have been referred to, as something clearly understood, and having a recognised meaning. The subject is, however, still involved in some obscurity, . . . [and] an attempt will be made to ascertain, in what the received opposition between aristocracy and *democracy*, as generally understood, really consists. . . . There is, however, greater difficulty in defining the distinction between the two varieties of the latter [limited, as opposed to absolute] class of governments, which are respectively called aristocracies and *democracies*. The distinction between these two forms of government is commonly made to depend on the sovereign power residing, or not residing, in a majority of the people. If, it is said, the sovereign power is vested in the people at large, or in a majority of the people, the government is a *democracy*: if only in a minority of the people, the government is an aristocracy.—*Sir G. C. Lewis, On the Influence of Authority in matters of Opinion*, appendix.

Curs'd *demon*! O for ever broken lie
Those fatal shafts, by which I inward bleed! *Prior.*

He [Sokratès] had been accustomed to hear, even from his childhood, a divine voice, interfering at moments when he was about to act, in the way of restraint, but never in the way of instigation. . . . Though late writers speak of this as the *dæmon* Sokratès, he himself does not personify it, but spea of it merely as 'a divine sign, a prophetic or supernatural voice.' He was accustomed not only to obey it implicitly, but to speak of it publicly and familiarly. . . . Such was the *dæmon* or genius of Sokratès as described by himself and as conceived in the genuine Platonic Dialogues—a voice always prohibitory, and bearing exclusively upon his own personal conduct. That which Plutarch and other admirers of Sokratès conceived as a *dæmon* or intermediate being between gods and men, was looked upon by the fathers of the Christian church as a devil, by Le Clerc as one of the fallen angels, by some other commentators as mere ironical phraseology on the part of Sokratès himself.—*Grote, History of Greece*, pt. ii. ch. lxviii.

The followers of Buddha . . . have turned with instinctive terror to propitiate the powers of evil, by whom alone such miseries are supposed to be inflicted, and to worship the *demons* and tormentors to whom their superstition is contented to attribute a circumscribed portion of the earth. *Demon* worship prevailed among the Singhalese before the in-

troduction of Buddhism by Mahindo.... The *demons* here denounced are distinct from a class of *demigods* who, under the name of Yakshyos, are supposed to inhabit the waters and dwell on the sides of Mount Meru.... Démonism. *s.* System of demon or devil worship.

The established theology of the heathen world from its first rise to its final overthrow, rested upon the basis of *demonism*. Scarce was there a single oracle delivered but by a person said to be possessed.—*Farmer, On the Demoniacs of the New Testament*, ch. i. sect. 7. (Rich.)

Démonist. *s.* Demon-worshipper.

But the creeds—that of the apostles, that of Nicea, or even that ascribed to St. Athanasius, and chanted in every church of the West—formed but a small part of the belief of Latin Christendom. That whole world was one in the popular religion. The same vast mythology commanded the general consent; the same angelology, *demonology*; the same worship of the Virgin and the saints, the same reverence for pilgrimages and reliques, the same notions of the life to come, of hell, purgatory, heaven.—*Milman, History of Latin Christianity*, b. xiv. ch. ii.

For these reasons (I say) 'tis very fit that notwithstanding the natural *demonstrableness* both of the obligations and motives of morality, yet, considering the manifest corruptness of the present estate which human nature is in, the generality of men should not be left wholly to the workings of their own minds, to the use of their natural faculties, and to the bare convictions of their own reason.—*Clarke, Evidences of Natural and Revealed Religion*, p. 282.

Demónstrably. *adv.* In a demonstrable manner; in such a manner as admits of certain proof; evidently; beyond possibility of contradiction.

Demónstrate. *v. a.* [Lat. *demonstratus*, pass. part. of *demonstro*; from *monstro* = show.] Show, or exhibit, in such a way as to be cognized by the senses (commoner, however, as applied, in *Logic*, to proofs made clear to the intellect in such a manner that the negation is inconceivable, implying a contradiction in terms; as in the syllogism, and mathematical proofs: hence, Demonstrative is often nearly synonymous with Deductive); prove in such a manner as shows the contrary position to be absurd.

We cannot *demonstrate* these things so, as to shew that the contrary often involves a contradiction.—*Archbishop Tillotson, Sermons.*

Demonstráting. *verbal abs.* Exhibition with proof, sensible or intellectual.

As the proving of these two things will overthrow all atheism, so it will likewise lay a clear foundation, for the *demonstrating* of a deity distinct from the corporeal world.—*Cudworth, Intellectual System*, fol. 145. (Rich.)

Demonstrátion. *s.*

1. Highest degree of deductive evidence; strongest degree of proof; such proof as not only evinces the position to be true, but shows the contrary position to be absurd and impossible; indubitable evidence of the senses or reason.

Where the agreement or disagreement of anything is plainly and clearly perceived, it is called *demonstration*.—*Locke.*

Peter the Lombard was, as it were, the Euclid of this science. Without holding an infallibility in the church except as to fundamental truths; and aware of no test by which fundamental truths can be infallibly ascertained; we find that the law of probable evidence is as binding on a rational agent as that which we term *demonstrative*.—*Gladstone, The State in its Relations with the Church*, ch. vii.

The taste of sugar of lead is not the sum of the tastes of its component elements, acetic acid and lead or its oxide; nor is the colour of green vitriol a mixture of the colours of sulphuric acid and copper. This explains why mechanics is a deductive or *demonstrative* science, and chemistry not. In the one, we can compute the effects of all combinations of causes, whether real or hypothetical, from the laws which we know to govern those causes when acting separately.... Not so in the phenomena which are the peculiar subject of the science of chemistry.—*J. S. Mill, System of Logic*, b. iii. ch. vi. § 1.

And to this, I that did not really adhere to that, will not be so far concerned in it as to make any reply, or at all endeavour to defend it, or to add of it farther than this, that the bare possibility that it might so signifie supersedes all *demonstrativeness* of proof from this text for the criminousness of will-worship.—*Hammond, Works*, vol. ii. pt. iv. fol. 178.

Démonstrátor. *s.*

1. One who proves; one who teaches; one who demonstrates.

Demóralize. *v. a.* Lower, or abolish, the morality of anything; lower the Morale.

This word is of late introduction into our language. (Scott, Works, fol. 11. 129.) To *demoralize* is to render them unreasonable, unholy, unjust.—*Todd.*

Demótic. *adj.* [Gr. δῆμος = people.] Appertaining to the people: (its special application being in the study of the *Egyptian Hieroglyphics*, where it denotes a certain variety of sign, or style of writing). See Enchorial.

b. In *Law.* See extracts.

Demurrer [is] a kind of pause upon a point of difficulty in an action; for, in every action, the controversy consists either in the fact, or in the law: if in the fact, that is tried by the jury; if in law, then is the case plain to the judge, or so hard and rare, as it breedeth just doubt. I call that plain to the judge wherein he is assured of the law; and in such case the judge, with his associates, proceeds to judgment without farther work. But when it is doubtful to him and his associates, then is there stay made, and a time taken, either for the court to think farther upon it, and to agree, if they can; or else for all the justices to meet together in the Chequer-chamber, and, upon hearing that which the serjeants can say of both parts, to advise, and set down as law, whatsoever they conclude firm, without farther remedy.—*Cowell.*

Demurrer [is] a pause or stop, put to any action, upon a point of difficulty, which must be determined by the court before any proceeding can be had therein; for, in every action, a point or controversy consists either in fact or in law; if in fact, that is tried by the jury; but if in law, that is determined by the court. A *demurrer*, then, is an issue upon a matter of law. . . . *Demurrers* are general without shewing any particular causes; or special where the causes of *demurrer* are particularly set down. . . . A *demurrer* in equity is nearly of the same nature as a *demurrer* in law, being an appeal to the judgment of the court whether the defendant shall be bound to answer the plaintiff's bill.—*Jacob, Law Dictionary.*

Applied to subjects other than *legal.*

The argument that evolution must come to a close in complete equilibrium or rest, . . . suggests that for aught which appears to the contrary, the universal death thus implied will continue indefinitely it is legitimate to point out how, on carrying the argument still further, we are led to infer a subsequent universal life. But while this last inference may fitly be accepted as a *demurrer* to the first, would be unwise to accept it in any more positive sense.—*Herbert Spencer, First Principles*, § 136.

Demý. *s.* [Anglicized form of *demi*, from *dimidium* = half, with the accent changed from the *first* to the *second* syllable.] Member of Magdalen College, Oxford, with imperfect rights, who, in relation to the full and complete fellow, stands as a *half*-fellow.

The society [of Magdalene College, Oxford] consisted of a president, of forty fellows, of thirty scholars called *Demies*, and of a train of chaplains, clerks, and choristers. . . . In the days of James the Second the riches of Magdalene were immense, and were exaggerated by report. The college was popularly said to be wealthier than the wealthiest abbey of the Continent. When the leases fell in,—so ran the vulgar rumour,—the rents would be raised to the prodigious sum of forty thousand pounds a year.—*Macaulay, History of England*, ch. viii.

Den. *s.* [A.S. *denu*.] Cavern or hollow running horizontally, or with a small obliquity, under ground (distinct from a *hole*, which runs down *perpendicularly*); cave of a wild beast.

uantes which aught hym a lytle money; that is a hundreth *denaries* or pieces of syluer coyne.—*Udall, Mathew*, xix. (Rich.)

Dénary. *s.* [Lat. *denus* = ten.] Division of ten: (its chief applications being to *numbers* as such; *topographical districts*, where it coincides with Tithing; and to *divisions of an army*, or some similar body of men, where it coincides with Decury).

The prince therefore having made the general partition of his kingdome into shires, or shares, he divided againe the same into lathes, as lathes into hundreds, and hundreds into tythings or *denaries*, as diuers have written.—*Holinshed, Description of England*, ch. iv. (Rich.)

Denátionalize. *v. a.* Divest of a national character.

The entire tendency of the modern or Malthusian political economy is to *denationalize*. It would dig up the charcoal foundations of the temple of Ephesus to burn as fuel for a steam engine!—*Coleridge, Table Talk.*

At the very outset, what are we to think of the soundness of this modern system of political economy, the direct tendency of every rule of which is to *denationalize*, and to make the love of our country a foolish superstition?—*Ibid.*

Buonaparte's decree *denationalizes*, as he calls it, all ships that have touched at a British port.—*Cobbett, Parliamentary Debates*, xx. 317.

His Royal Highness can never admit that neutral trade with Great Britain can be constituted a public crime, the commission of which can expose the ships of any power to be *denationalized*.—*Declaration of the Prince Regent of Great Britain and Ireland*, January, 1813.

Denáy. *s.* Denial; refusal. *Obsolete.*

To her in haste, give her this jewel: say
My love can give no place, bide no *denay.*
Shakespear, Twelfth Night, ii. 4.

Dendrític. *adj.* Treelike.

The Bryozoa, which coat, as with a delicate moss, fuci, shells, or other marine productions, or which rise in *dendritic* forms, like the hydrozoic corallines, with which they were associated by Ellis, with which they would equally have passed for plants with Ray, are, perhaps, the most striking examples of how complicated an animal structure may be masked by mere outward form.—*Owen, Lectures on Comparative Anatomy*, lect. viii.

Dendrólogy. *s.* [Gr. δένδρον = tree, λόγος = word, speech, reason, principle.] Scientific arboriculture.

Whether a work upon the plan adopted by the author . . . be calculated to supply a deficiency in the list of those works relating to *dendrology* which we already possess must be left to the opinion . . . of that public to which his volume . . . is addressed. . . . Most of these treatises are . . . confined to certain departments of *dendrology*.—*Selby, History of British Forest Trees*, preface.

Dendrómeter. *s.* [Gr. μέτρον = measure.] See extract.

He speaketh another language to all the world in deeds, and thereby so toucheth us in honour and *denegation* of justice, as we be inforced and compelled to use the sword.—*Holinshed, Scotland*, A.D. 1542. (Rich.)

Sore did they assault me and craftily tempt me in their wicked waies, or at least to a *denegation* of my faith and true opinions, though it were but by colour and dissimulation.—*Letter of T. Wittel to J. Cartes*, in *Fox, Martyrs*, fol. 8677. (Rich.)

Deniable. *adj.* Capable of being, or liable to be, denied.

The negative authority is also *deniable* by reason —*Sir T. Browne.*

Denial. *s.*

1. Negation; contrary of affirmation; contrary of confession.

No man more impudent to deny, where proofs were not manifest; no man more ready to confess with a repenting manner of aggravating his own evil, where *denial* would but make the fault fouler. —*Sir P. Sidney.*

2. Refusal: (opposed to *grant, allowance*, or *concession*).

Here comes your father; never make *denial*:
I must and will have Katharine to my wife.
Shakespear, Taming of the Shrew, ii. 1.

He, at ev'ry fresh attempt, is repell'd
With faint *denials*, weaker than before. *Dryden.*

a. By *contradicting, opposing*, or *holding the negative of*, a proposition.

b. By *refusing.*

It may be I am esteemed by my *denier*, sufficient of myself to discharge my duty to God as a priest, though not to men as a prince.—*Eikon Basilike.*

c. By *not owning* or *acknowledging.*

If it was so fearful when Christ looked his *denier* into repentance, what will it be when he shall look him into destruction?—*South.*

Deniér. *s.* [Fr.; from Lat. *denarius*.] Small coin.

You will not pay for the glasses you have broke?—No, not a *denier*.—*Shakespear, Taming of the Shrew*, induct. sc. 1.

Denígrate. *v. a.* [Lat. *denigratus*, passive part of *denigro* = blacken; from *niger* = black.] Blacken. *Rare.*

By suffering some impression from fire, bodies are casually or artificially *denigrated* in their natural complexion: thus are charcoals made black by an infection of their own suffitus.—*Sir T. Browne, Vulgar Errours.*

Hartshorn, and other white bodies, would be *denigrated* by heat; yet camphire would not at all lose its whiteness.—*Boyle.*

Denigrátion. *s.* Blackening, or making black.

These are the advenient and artificial ways of *denigration*, answerably whereto may be the natural progress.—*Sir T. Browne.*

In several instances of *denigration* the metals are worn off, or otherwise reduced into very minute parts.—*Boyle.*

Denígrator. *s.* One who, or that which, denigrates. *Rare.*

Denizátion. *s.* Act of enfranchising or making free.

That the mere Irish were reputed aliens appears by the charters of *denization*, which in all ages were purchased by them.—*Sir J. Davies, Discourse on the State of Ireland.*

It is Basilicon Doron, it is the bounty and kindness of the king, to be born out of his dominions, to give him the capacity of a subject, to sue and be sued, and the like, which cannot be forfeited even for breach of conditions in the letters patent of *denization*.—*State Trials*, ch. ii. 1682, *Proceedings between the King and the City of London.* (Rich.)

Denize. *v. a.* (accent doubtful.) Same as Denizen. *Rare.*

But when their posteritie became not altogether so wearie in keeping, as their ancestors were valiant in conquering, the Irish language was free *denized* in the English pale.—*Holinshed, Description of Ireland*, ch. i. (Rich.)

There was a private act made for *denizing* the children of Richard Hills, an eminent merchant abroad.—*Strype, Memorial of Edward IV.* 1552. (Rich.)

Dénizen. *s.* [see last extract.]

1. Freeman; one enfranchised.

Denizen is a British law term, which the Saxons and Angles found here, and retained.—*Sir J. Davies*, preface.

Thus th' Almighty sire began: Ye gods,
Natives, or *denizens*, of blest abodes,
From whence these murmurs? *Dryden.*

A great many plants will hardly, with nursing, be made to produce their seed out of their native soil; but corn, so necessary for all people, is fitted to grow and to seed as a free *denison* of the world.—*Grew, Cosmologia Sacra*, b. iii. ch. ii.

2. Inhabitant; occupant.

The vagrant propensity that emptied so many a sty of its *denizen* became a nuisance, for we read that early in the reign of Edward I. four men were chosen and sworn to 'take and kill all swine found wandering within the walls of the city, to whomsoever they might belong.'—*Timbs, Romance of London, Plantagenet Pigs.*

[*Denizen.*—Commonly explained as a foreigner enfranchised by the king's charter, one who receives the privilege of a native *ex donatione regis*, from the Old French *donaison, donison*, a gift. But the general meaning of the word is simply one domiciled in a place. A denizen of the skies is an inhabitant of the skies. In the Liber Albus of the City of London the French *deinzein*, the original of the English word, is constantly opposed to *forein*, applied to traders within and without the privileges of the city franchise respectively. 'Et fait assavoire qe ceste ordinance se estent auxibien as *foreyns* come as *denzeins* de touz maneres de tieulx bargayns faitz dedeinz la dite fraunchise,' p. 370. 'Item qe nulle pulletier *deinzein*—ne veignent pur achatier nulle manere de pulletrie de nulle *forein* pulletere,' p. 465. 'Qe chescun qavera louwe ascuns terres ou tenementz de *denszein* ou de *forein* deinz la fraunchise de la citee,' p. 448. The correlatives are rendered in Latin by the terms *intrinsecus* and *forinsecus*; 'mercatoris forinseci seu intrinseci,' p. 252; and as *forinsecus* and *forein* are from Latin *foras*, French *fors*, without, while the meaning of *intrinsecus* is simply one who is within, so *deinzein* is from the old form *deinz*, in which the modern *dans*, in, within, always appears in the Liber Albus. *Deins né*, né dans le pays. (Roquefort.)—*Wedgwood, Dictionary of English Etymology.*]

Dénizen. *v. a.* Invest with the character of a denizen; naturalize. *Rare.*

Pride, lust, covetize, being several
To these three places, yet all are in all;
Mingled thus, their issue is incestuous;
Falshood is *denizen'd*, virtue is barbarous. *Donne.*

These Anglo-Danes, thus *denizened*, were now also natives, differing in nothing from the Anglo-Saxons or English, as they were then called, except in some difference of dialect which was rapidly lessening, and, perhaps, in retaining more predilection for some of their heathenish customs.—*Southey, Lives of the British Admirals*, ch. ii.

Dénnet. *s.* [? person so named.] Carriage so called, with two wheels and one horse, a variety of the gig: (the term and vehicle common about 1825).

In those days men drove 'gigs' as they since have driven stanhopes, tilburys, *dennets*, and cabriolets, and I rather piqued myself upon my 'turn out;' my chestnut horse was a fast trotter, and in little more than three quarters of an hour, from Westminster Bridge, I reached mine host's retreat.—*Theodore Hook, Gilbert Gurney*, vol. ii. ch. xi.

Denóminable. *adj.* Capable of being denominated. *Rare.*

An inflammation either simple, consisting only of an hot and sanguineous affluxion, or else *denominable* from other humours, according to the predominancy of melancholy, flegm, or choler.—*Sir T. Browne, Vulgar Errours*, iii. 3. (Rich.)

Denóminate. *adj.* Named.

Amongst the excellent acts of that king, one above all hath the pre-eminence. It was the erection and institution of an order or society which we call Salomon's House; . . . Some think it beareth the founder's name a little corrupted, as if it should be Solamona's House. But the records write it as it is spoken. So as I take it to be *denominate* of the king of the Hebrews, which is famous with you and no stranger to us.—*Bacon, New Atlantis.* (Ord MS.)

Denóminate. *v. a.* [Lat. *de-nominatus*, pass. part. of *de-nomino*; from *nomen* = name.] Name; give a name to. See Denomination.

Their commendable purpose being not of every one understood, they have been in latter ages construed as though they had superstitiously named either that those places, which were *denominated* of angels and saints, should serve for the worship of so glorious creatures; or else those glorified creatures for defence, protection, and patronage of such places.—*Hooker, Ecclesiastical Polity*, b. v.

Predestination is destructive to all that is established among men, to all that is most precious, to human nature, to the two faculties that *denominate* us men, understanding and will; for what use can we have of our understandings, if we cannot do what we know to be our duty? And if we act not voluntarily, what exercise have we of our wills?—*Hammond, On Fundamentals.*

(See also under Denominative, *adj.*)

Denominátion. *s.*

1. Name significant and connotative. (A fuller explanation of this definition may

be got by comparing it with Connotation and contrasting it with Denotation. It agrees with the former in being founded upon some attribute belonging to the object to which it applies; such object having such denomination because it possesses the quality implied by the name; e.g. *Christian* is the denomination of a person whose religion is *Christianity*. Hence, we cannot use a denominative name without knowing something about its bearer. With names that are merely denotative, and with proper names, which are *not* denominations, this is not the case. Although, in general, they apply to the members of certain classes, they tell us nothing about the characteristics of those classes; besides which they may be applied to objects other than those to which they were originally attached, as is the case when the names of men or women are given to ships, dogs, racehorses, and the like. Here they simply *denote* the object, or mark it off from all others; without, however, giving us a single quality or attribute.)

The liking or disliking of the people gives the play the *denomination* of good or bad; but does not really make or constitute it such.—*Dryden.*

All men are sinners: the most righteous among us must confess ourselves to come under that *denomination*.—*Rogers.*

2. Sect, class, or division: (especially of *Christians*).

Philosophy, the great idol of the learned part of the heathen world, has divided it into many sects and *denominations*; as Stoicks, Peripateticks, Epicureans, and the like.—*South.*

3. In *Rhetoric*. See extract.

By a fygurative speeche colled *denomination* (whereby the hole is named by part) they named the hole Iland 'Haiti,' that is, roughe; for as muche as in many places the face of this strand (Hispaniola) is rough by reason of the craggie mountains.—*Eden, Translation of P. Martyr*, 125. (Ord MS.)

Denóminátional. *adj.* Relating to, consisting in, or constituting, a denomination: (its chief application being to divisions in the way of *religious doctrine*; whence it often coincides with *sectarian*, than which it is a less invidious term).

Their zeal was chiefly shown in the defence of their *denominational* differences.—*Buckle, History of Civilization in England*, vol. i. ch. iii.

Denóminative. *adj.* Having the character of a denomination.

Connotative names have hence been also called *denominative*, because the subject which they denote is *denominated* by, or receives a name from, the attribute which they connote. Snow, and other objects, receive the name white, because they possess the attribute which is called whiteness; James, Mary, and others receive the name man, because they possess the attributes which are considered to constitute humanity. The attribute, or attributes, may therefore be said to *denominate* those objects, or to give them a common name.—*J. S. Mill, System of Logic*, b. i. ch. iii. § 6.

Denóminative. *s.* That which has the character of a denomination.

This figure of my body, is my body, by the rule of *denominatives*, signifies, This is the figure of my body.—*Jeremy Taylor, Real Presence of Christ in the Sacrament.* (Ord MS.)

Denominátor. *s.* That which denominates.

Both the seas of one name should have a common *denominator*.—*Sir T. Browne, Vulgar Errours.*

In *Arithmetic*. See extract.

The *denominator*, of a fraction, is the number below the line, showing the nature and quality of the parts which any integer is supposed to be divided into: thus in $\frac{6}{8}$, 8 the *denominator* shews you, that the integer is supposed to be divided into 8 parts, or half quarters; and the numerator 6 shews, that you take 6 of such parts, i.e. three quarters of the whole.—*Harris.*

When a single broken number or fraction hath for its *denominator* a number consisting of an unit, in the first place towards the left hand, and nothing but cyphers from the unit towards the right hand, it is then more aptly and rightly called a decimal fraction.—*Cocker, Arithmetick.*

Denominator of any proportion, is the quotient arising from the division of the antecedent by the consequent: thus 6 is the *denominator* of the proportion that 30 hath to 5, because 5) 30 (6. This is also called the exponent of the proportion, or ratio.—*Harris.*

Denótable. *adj.* Capable of being denoted.

In hot regions, and more spread and digested flowers, a sweet savour may be allowed, *denotable* from several human expressions.—*Sir T. Browne, Miscellanies*, p. 25.

Denótate. *v. a.* Convey a denotation.

Wherefore serve names, but to *denotate* the nature of things?—*Bishop Hall, Against Romanists*, sec. 38. (Ord MS.)

Denotátion. *s.* Marking off, or separation, of anything. (When this is conveyed by a *name*, the name merely serves for this purpose, and suggests no attribute connected with the object to which it applies. See Connotation, Denomination, and Definition. Proper names are preeminently denotative; telling us that such an object has such a term to denote it, but telling us nothing as to any single attribute.)

Mind and conscience are distinguished—the former being properly the *denotation* of the faculty merely speculative or intellectual; this latter, of the practical judgement.—*Hammond, Of Conscience.*

Language, as Sir James Mackintosh used to say of governments, 'is not made, but grows.' A name is not imposed at once and by previous purpose upon a class of objects, but is first applied to one thing, and then extended by a series of transitions to another and another. By this process . . . a name not unfrequently passes by successive links of resemblance from one object to another, until it becomes applied to things having nothing in common with the first things to which the name was given; which, however, do not, for that reason, drop the name. . . . When a name has fallen into this state, [it] can only be made serviceable by stripping it of some part of its multifarious *denotation*, and confining it to objects possessed of some attributes in common, which it may be made to connote. Such are the inconveniencies of a language which 'is not made, but grows.' Like the governments which are in a similar case, it may be compared to a road which is not made but has made itself: it requires continual mending in order to be passable.—*J. S. Mill, System of Logic*, b. i. ch. iii. § 7.

Denótative. *adj.* Indicating denotation.

What are the effects of sickness? The alteration it produces is so *denotative*, that a person is known to be sick by those who never saw him in health.—*Letters upon Physiognomy*, p. 121.

Denóte. *v. a.* See Denotation.

Proper names are not connotative: they *denote* the individuals who are called by them; but they do not indicate or imply any attributes as belonging to those individuals. When we name a child by the name Paul, or a dog by the name Cæsar, these names are simply marks used to enable those individuals to be made subjects of discourse.—*J. S. Mill, System of Logic*, b. i. ch. iii. § 6.

When the name which is the subject of the proposition is a general name, we may intend to affirm or deny the predicate, either of all the things that the subject *denotes*, or only of some. When the predicate is affirmed or denied of all and each of the things *denoted* by the subject, the proposition is universal; when of some non-assignable portion of them only, it is particular. Thus, All men are mortal; Every man is mortal; are universal propositions. No man is immortal, is also an universal proposition, since the predicate, immortal, is denied of each and every individual *denoted* by the term man; the negative proposition being exactly equivalent to the following, Every man is not-immortal. But 'some men are wise,' 'some men are not wise,' are particular propositions; the predicate wise being in the one case affirmed and in the other denied not of each and every individual *denoted* by the term man, but only of each and every one of some portion of those individuals, without specifying what portion.—*Ibid.*

Denótement. *s.* Denotation. *Rare.*

In a man that's just,
They are close *denotements* working from the heart
That passion cannot rule.

2. Threaten by some outward sign or expression.

Like heralds, first *denounce* the wat'ry war.
Dryden.

3. Cry out against; stigmatize.

In the comparatively correct age in which our lot is cast, it would be almost as unjust to apply our more severe standard to him and his associates, as it would have been for the Ludlows and Hutchinsons of the seventeenth century, in writing a history of the Roman empire, to *denounce* the immoralities of Julius Cæsar.—*Lord Brougham, Historical Sketches of Statesmen of the Reign of George III., Mr. Fox.*

4. Give information against; delate; accuse publicly.

Glare on the nations, and *denounce* from thee?
Young.

They are what naturalists call serrated or *dentated* bills; the inside of them, towards the edge, being thickly set with parallel or concentric rows of short, strong, sharp pointed prickles. Should it be said that by continual endeavours to shoot out the tongue, the woodpeckers' species may, by degrees, have lengthened the organ itself, beyond that of other birds, what account can be given of its form, of its tip? The earth's solid crust undergoes changes that supply another group of illustrations. The *denudation* of lands and the depositing of the removed sediment in new strata at the bottoms of seas and lakes, is a process throughout which motion is obviously determined in the same way as is that of the water effecting the transport.—*Herbert Spencer.*

I have already mentioned that the portion of a series of strata which during the formation of a fault has been elevated above the general level of the surface, is sometimes swept away, and leaves no vestige of the disturbance.... This clearing away ... is also common when an anticlinal axis has been formed, the softer beds being washed away. ... The process ... is called *denudation*. When a valley is formed simply by the sweeping away of a portion of strata regularly bedded and undisturbed, it is usually called a valley of *denudation*; but when, in consequence of some subterraneous movement, the lower level is in a hollow, and is surrounded by hills of the upper strata dipping away in all directions from it, there is then said to be a valley of elevation.—*Ansted, Geology*, vol. i. ch. ii. p. 37.

Tell Mrs. W. her postscripts are always agreeable. They are so legible too. Your manual-graphy is terrible, dark as Lycophron. 'Likelihood,' for instance, is thus typified .... I should not wonder if the constant making out of such paragraphs is the cause of that weakness in Mrs. W.'s eyes, as she is tenderly pleased to express it. Dorothy, I hear, has mounted spectacles; so you have *deoculated* two of your dearest relations in life. Well, God bless you, and continue to give you power to write with a finger of power upon our hearts what you fail to impress, in corresponding lucidness, upon our outward eye-sight!—*Lamb, Letter to Wordsworth*, April 9, 1816.

Deoxidátion. *s.* In *Chemistry.* Process by which any compound is deprived of its oxygen; reduction.

That animal life is immediately or mediately dependant on vegetal life is a familiar truth; and that, in the main, the processes of animal life are opposite to those of vegetal life, is a truth long current among men of science. Chemically considered, vegetal life is chiefly a process of *de-oxidation*, and animal life chiefly a process of oxidation: chiefly, we must say, because in so far as plants are expenders of force for the purposes of organization, they are oxidizers (as is shown by the exhalation of carbonic acid during the night); and animals, in some of their minor processes, are probably *de-oxidizers*.—*Herbert Spencer.*

Deóxidize. *v. a.* In *Chemistry.* Reduce from the state of an oxide; deprive of oxygen.

If again we look at a smaller group, as the metallic oxides, we see that whereas those metals that have atoms nearest in weight to the atoms of oxygen, cannot be separated from oxygen by heat, even when it is joined by a powerful collateral affinity; those metals which differ more widely from oxygen in their atomic weights, can be *de-oxidized* by carbon at high temperatures; and those which differ from it most widely, combine with it very reluctantly, and yield it up if exposed to thermal undulations of moderate intensity. And here, indeed, remembering the relations among the atomic weights in the two cases, may we not suspect a close analogy between the de-oxidation of a metallic oxide by carbon under the influence of the longer ethereal waves, and the de-carbonization of carbonic acid by hydrogen under the influence of the shorter ethereal waves?—*Herbert Spencer, Data of Biology.*

Deóxidizer. *s.* That which deoxidizes.

In French the forms are *dépendre* and *dépendant*, giving *dépendance* = dependence, and *dépendamment* = dependently; the practice in the Latin language being to form the participle in *-e-* or *-a-* according to the conjugation (amant-is, docent-is, regent-is), in the French to form the participle in *-a-* in all cases. In English, the rule, subject to the remark under Excellent, is that when a word is derived from a Latin participle it is spelt with the characteristic vowel, *a* or *e*, as the case may be, when from the French with *a*. 2. In *Grammar.* Latin verb, with a passive conjugation but an active meaning, often with a reflective or middle import.

This form of expression gives . . . an instrument of criticism in investigating the origin of certain *deponent* verbs. In all languages there is a certain number of verbs denoting actions, reciprocal or mutual to the agents. Such are the words embrace, converse, strike against, wrestle, fight, rival, meet, and several more. There are also other words where the existence of two parties is essential to the idea conveyed, and where the notion, if not that of reciprocal action, is akin to it; viz. reproach, compromise, approach, &c. Now in certain languages (the Latin and Greek) some of these verbs have a passive form; i.e. they are *deponents*,—loquor, colloquor, luctor, reluctor, amplector, suavior, osculor, suspicor, Latin: φιλοτιμέομαι, φιλοφρονέομαι, μάχομαι, διαλέγομαι, ἀλέομαι, διαλύομαι, ἀμείβομαι, &c. Greek. Hence arises the hypothesis, that it is to their reciprocal power on the one hand, and to the connection between the passive, reflective, and reciprocal forms on the other, that these verbs owe their *deponent* character.—*Dr. R. G. Latham, Transactions of the Philological Society*, March 22, 1844.

Délta. *s.* [name of the fourth letter in the Greek alphabet; in Hebrew, *Daleth*: its form, as a *capital*, being Δ; i.e. either an equilateral or an isosceles triangle. Its chief special application is in Physical Geography and Geology, which it has taken from the shape of the block of land enclosed between the first and last of the seven mouths of the Nile, which the Greeks called the Delta (the approximate triangle being viewed from the sea) of the Nile. It has since been extended to the land at the mouths of other rivers, in some of which the likeness to the letter is scarcely to be recognized; indeed where it means little more than alluvial deposit.] Strand or alluvial land enclosed within the forks of a river and the sea, which forms its base.

Before the Restoration scarcely one ship from the Thames had ever visited the *Delta* of the Ganges. Démagogue. *s.* [Gr. δημάγωγος, from δῆμος = people, and ἄγωγος (from ἄγω = lead) = leader.] Ringleader of the rabble; popular and factious orator.

Who were the chief *demagogues* and patrons of tumults, to send for them, to flatter and embolden them.—*Eikon Basilike.*

Demosthenes and Cicero, though each of them a leader, or, as the Greeks called it, a *demagogue*, in a popular state, yet seem to differ in their practice.—*Swift.*

No schoolman could be a great man but as a schoolman. William of Ockham alone was a powerful *demagogue*—scholastic even in his political writings, but still a *demagogue*.—*Milman, History of Latin Christianity*, b. xiv. ch. iii.

Dr. Grantley, however, has a holy horror of the impious *demagogue*, as on one occasion he called Bold. . . . Now, I will not say that the Archdeacon is strictly correct in stigmatizing John Bold as a *demagogue*, for I hardly know how extreme must be a man's opinions before he can be justly called so: but Bold is a strong reformer.—*A. Trollope, The Warden*, ch. ii.

I will notice first some Greek immigrations, the time of whose incoming may in this way be pretty accurately noted; but which have either escaped the attention of our lexicographers, or have seemed to them unworthy of note. We should scarcely suspect 'biography' to be so recent as it is, were it not for the fact that Dryden continually uses 'biographia.' 'Cynosura,' employed by Hacket and Henry More, preceded 'cynosure;' '*demagogi*,' employed also by Hacket, went before '*demagogues*.' Bearing out the novelty of this last word in the middle of the seventeenth century, let me just remind you that Milton in his Εἰκονοκλάστης finds in the use of '*demagogue*' in the Icon Basilike.—'this goblin word,' as he calls it,—an argument that King Charles could not have been author of the work. His words are so curious that, though quote by Richardson and referred to by Todd, I will appe them here:—'Setting aside the affrightment of goblin word (*demagogue*), for the king, by his lear cannot coin English as he could money to be current, and it is believed this wording was above his knowi style and orthography, and accuses the whole composure to be conscious of some other author.' § 4.—*Archbishop Trench, On some Deficiencies in ou English Dictionaries*, p. 26, and note.

Demánd. *v. a.* [Fr. *demander*.]

Will you, I pray, *demand* that *demi-devil*,
Why he hath thus ensnar'd my soul and body?
Shakespear, Othello, v. 2.

And when Uriah was come unto him, David *demanded* of him how Joab did, and how the people did, and how the war prospered.—*2 Samuel*, xi. 7.

My bookseller tells me, the *demand* for those my papers increases daily.—*Addison, Spectator*.

4. In *Law*. See extract.

It hath also a proper signification distinguished from plaint; for all civil actions are pursued either by *demands* or plaints, and the pursuer is called demandant or plaintiff. There are two manners of *demands*, the one of deed, the other in law: in deed, as in every præcipe, there is express demand: in law, as every entry in land-distress for rent, taking or seizing of goods, and such like acts, which may be done without any words, are *demands* in law.—*Blount*.

Demándable. *adj.* Capable of being, or liable to be, demanded, requested, or asked for.

Demándant. *s.* One who demands; demander: (this latter being the *commoner*, the other the more *technical* or *legal* term).

One of the witnesses deposed, that dining on a Sunday with the *demandant*, whose wife had sat below the squire's lady at church, she the said wife dropped some expressions, as if she thought her husband ought to be knighted.—*Spectator*.

Demánder. *s.* One who demands; purchaser.

They grow very fast and fat, which also bettereth their taste, and delivereth them to the *demander's* ready use at all seasons.—*Carew, Survey of Cornwall*.

Demarcátion. *s.* [*mark*, in the sense of *march* = boundary.] Distinction.

The speculative line of *demarcation*, where obedience ought to end, and resistance must begin, is faint, obscure, and not easily *definable*.—*Burke, Reflections on the French Revolution*.

Having, by these eliminations, obtained the body which practically constitutes the people, we have next to consider whether the distinction between aristocracy and democracy turns upon a precise *demarcation* of the majority and minority of this body.—*Sir G. C. Lewis, On the Influence of Authority in Matters of Opinion*, appendix.

Demárch. *s.* ? Excursion.

Reason checks fancy in its most extravagant sallies, and imagination enlivens reason in its most extravagant *demarches*.—*Collection of Letters in the London Journal*, 1721, no. 10.

Demeán. *s.* Mien; presence; carriage; demeanour; deportment.

At his feet, with sorrowful *demean*,
And deadly hue, an armed corse did lie.
Spenser, Faerie Queen, ii.

Demeán. *v. a.* [from Fr. *démener*.—see last extract.] Behave; comport: (with *self*).

Those plain and legible lines of duty requiring us to *demean ourselves* to God humbly and devoutly, to our governors obediently, and to our neighbours justly, and to ourselves soberly and temperately.—*South, Sermons*.

A man cannot doubt but that there is a God; and that, according as he *demeans himself* towards him, he will make him happy or miserable for ever.—*Archbishop Tillotson, Sermons*, i.

Strephon had long perplex'd his brains,
How with so high a nymph he might
Demean himself the wedding-night. *Swift*.

[*Demean*.—To wield, to manage; *demeanour*, behaviour.

'So is it not a great mischaunce
To let a foole have governaunce
Of things that he can not *demaine*.'
(Chaucer in Richardson.)

'His herte was nothing in his own *demain*.'
(Ibid.)

'Come on with me, *demeane* you like a maide.'
(Ibid.)

French, *démener, se démener*, to stir much, move to and fro;—*un procès*, to follow a suit;—*marchandise*, to traffic. *Mener*, to conduct, lead, manage, handle;—*les mains*, to lay about one;—*la loi*, to proceed in a suit. (Cotgrave.) Italian, *menare*, to guide, conduct, direct, or bring by the hand, to bestir. (Florio.) The later Latin had *minare*, to drive cattle, derived by Diez from *minari*, to threaten; 'asinos et equum sarcinis onerant et *minantes* baculis exigunt.' (Apuleius.) 'Agasones equos agentes, i.e. *minantes*. (Paulus ex Festo.) But the notion of threatening does not seem to me to be a point of view from which the act of driving beasts would be likely to be named. On the other hand the Old French spelling, *mainer*, suggests an obvious derivation from Latin *manus*, French *main*, the hand, as we speak of handing one down-stairs; and *mener* is often synonymous with *manage*, which is undoubtedly from that source. Observe the frequent references to the hand in the explanations from Cotgrave and Florio above given. The same change of vowel is seen in French *menottes*, handcuffs.—*Wedgwood, Dictionary of English Etymology*.]

Demeán. *v. a.* [from *mean*.] Lessen; debase; undervalue.

Now, out of doubt, Antipholis is mad;
Else he would never so *demean* himself.

Demeánour. *s.* Carriage; behaviour.

To whom thus Eve, with sad *demeanour* meek,
Ill worthy I, such title should belong
To me transgressor. *Milton, Paradise Lost*, xi. 162.

Admiration, esteem, &c. are more the result of a judgment of the understanding; (though often of an erroneous one;) 'deference' is apt to depend on feelings;—often, on whimsical and unaccountable feelings. It is often yielded to a vigorous claim,—to an authoritative and overbearing *demeanour*. With others of an opposite character, a soothing, insinuating, flattering, and seemingly submissive *demeanour* will often gain great influence. They will yield to those who seem to yield to them; the others, to those who seem resolved to yield to no one.—*Whately, Elements of Rhetoric*, pt. i. ch. i. § 2.

Mary was in agonies of grief; and her distress affected him more than was imagined by those who judged of his heart by his *demeanour*.—*Macaulay, History of England*, ch. xv.

The men, as usual, liked her artless kindness and simple refined *demeanour*.—*Thackeray, Vanity Fair*.

Dr. Grantley never lays aside that *demeanour* which so well becomes him. He has all the dignity of an ancient saint with the sleekness of a modern bishop; he is always the same; he is always the archdeacon; unlike Homer, he never nods.—*A. Trollope, The Warden*, ch. ii.

Démency. *s.* See Dementia.

The king his clemency
Dispenseth with his *demency*. *Skelton*.

Mr. Pinel arranged mental diseases into—1st, Mania; . . . 2nd, Melancholia; 3rd, *Demency*, or a peculiar debility of the operations of the understanding, and the acts of the will; . . . and 4th, Idiotism.—*Copland, Dictionary of Practical Medicine*.

Deméntate. *v. a.* Afflict with dementia; madden. *Rare.*

Deméntedness. *s.* Attribute suggested by Demented.

It is named by Pinel dementia or démence, *dementedness*.—*Prichard*, in *Cyclopædia* (*Forbes, Tweedie, and Conolly*) *of Practical Medicine*.

Deméntia. *s.* [Lat. *de* = from, and suggesting the notion of deflection, deterioration, or change for the worse, and *mens, mentis* = mind; the French form being *démence*. To this *demency* stands in the same relation as *clemency* to *clémence*, Lat. *clementia*. In *Nosology*, *demency* is little more than an imperfectly Anglicized form of the French or Latin, which has not become current. Nor is it necessary; *dementia*, like *delirium*, being a word which is rarely used except in the singular number. The meaning of this word, at least in *Nosology*, is more special than those of its congeners. *Demented*, and the like, nearly coincide with *out of* (*one's*) *mind*, or *deranged*, i.e. mad in the looser sense of the term. *Dementia*, on the other hand, applies to the weakening, the breaking-down, and the partial, or incipient, loss of the faculties, i.e. the first stage of Fatuity.] Idiotcy.

We shall divide maniacal fatuity into two grades or stages. The first is that which Esquirol and Georget have named *démence* or *dementia*, a term which is established by the authority of these writers, and has been received into general use. . . . The approach of *dementation*, or the first period of fatuity, is indicated by a comparative state of calmness. . . . *Demented* persons are generally quiet and inactive.—*Prichard*, in *Cyclopædia* (*Forbes, Tweedie, and Conolly*) *of Practical Medicine*.

May speak, unbounneting, to as proud a fortune
As this that I have reach'd.
Shakespear, Othello, i. 2.

b. Mental.

The misfortune of mental *derangement* is a topic of such extreme delicacy that I consider it as the duty of a biographer rather to sink in tender silence, than to proclaim with circumstantial and offensive temerity, the minute particulars of a calamity to which all human beings are exposed, and perhaps in proportion as they have received from Nature those delightful but dangerous gifts, a heart of exquisite tenderness, and a mind of creative energy.—*Hayley, Life of Cowper*, i. 109. But when you wish to expose to ridicule something really deserving of it which has been advanced seriously, or to rescue from ridicule what has been unfairly made a jest of, it will usually be advisable to keep a little aloof, for a time, from the very point in question, till you have brought men's minds, by the introduction of suitable topics, into the mood required,—the *derisive*, or the serious, as the case may be,—and then to bring them up to that point, prepared to view it quite differently from what they had done. And if this be skilfully managed, the effect will sometimes be very striking.—*Whately, Elements of Rhetoric*, pt. i. ch. iii. § 6.

And shake their heads, *desponding* of their art.
Dryden.

Others depress their own minds, *despond* at the first difficulty; and conclude that making any progress in knowledge, farther than serves their ordinary business, is above their capacities.—*Locke.*

Despóndency. *s.* Despair; hopelessness; desperation.

The death of Sir Edmundbury Godfrey has generally been attributed to his own act, from constitutional and hereditary melancholy, his father having destroyed himself during a fit of mental *despondency*; but, considering the use that was made of it by the incendiaries engaged in the fabrication of the popish plot, that it was the hinge on which the whole of the machinery turned, there is every reason to believe that the murder was perpetrated by themselves, for the purpose of charging it upon those who were marked out for their victims.—*Agnes Strickland, Lives of the Queens of England, Catharine de Braganza.*

Despóndent. *adj.* Despairing; hopeless; without hope.

It is well known, both from ancient and modern experience, that the very boldest atheists, out of their debauches and company, when they chance to be surprised with solitude or sickness, are the most suspicious, timorous, and *despondent* wretches in the world.—*Bentley.*

There is no surer remedy for superstitious and *desponding* weakness, than first to govern ourselves by the best improvement of that reason which Providence has given us for a guide; and then, when we have done our own parts, to commit all chearfully, for the rest, to the good pleasure of Heaven with trust and resignation.—*Sir R. L'Estrange.*

He considers what is the natural tendency of such a virtue, or such a vice: he is well apprized that the representation of some of these things may convince the understanding, some may terrify the conscience, some may allure the slothful, and some encourage the *desponding* mind.—*Watts.*

Déspot. *s.* [Gr. δεσπότης = master.]

1. Title, under the Byzantine empire, of certain independent, or approximately independent, dynasts, princes, or rulers. (The Wallachian and Moldavian terms, *Hospodar* (*Gospodar*), are forms of the same word; and it is these that are probably meant by the word *Dacian* in the extract from Johnson. With this sense, the term, being a title, is a *proper*, rather than a *common*, name, and is generally preceded by the definite article; the domain over which the *Despot's* rule extends, and his station, being a Despotat: see extracts.)

Paleologus was both by the partriarke and the young emperor honored with the title of the *despot*, another step into the empire.—*Knolles, History of the Turks*, 112. (Ord MS.)

That portion of the Byzantine empire situated to the west of the range of Pindus, was saved from a feudal domination by Michael ... The *despotat* of Epirus was merely a change in the name of the government. . . The absence of all feudal organization, and the employment of a large body of native militia, mingled with hired mercenaries, gave the *despotat* of Epirus a Byzantine type.... The *despots* of Epirus long ruled their dominions by employing the various resources of the different classes of their subjects for the general good.... The wealth of the Greeks enabled the *despots* to maintain a respectable army of mercenaries.... Almost the only facts that have been preserved relate to the wars and alliances of the *despots* and their families with the Byzantine emperors and the Latin princes.... They all assumed the title of Angelos, Komnenos, Ducas; and the title of *despot*, by which they are generally distinguished, was a Byzantine honorary distinction, never borne by the earlier members of the family until it had been conferred on them by the Greek emperor. Michael I., the founder of the *despotat*, distinguished himself by his talents as a soldier and a negotiator.—*Finlay, Medieval Greece and Trebizond*, ch. vi. s. 1.

2. Absolute ruler; (generally in a *bad* sense, the rule of a despot in this sense being a Despotism).

An absolute prince; one that governs with unlimited authority. This word is not in use except as applied to some Dacian prince—as, the *despot* of Servia. So far Dr. Johnson. Mr. Mason observes, that 'the foregoing remark was true enough at the time it was written; but the French revolutionists have been very liberal in conferring this title.' If Dr. Johnson or Mr. Mason had opened the old dictionary of Cotgrave, the word would have presented itself to them, not as one of exclusive or modern usage only; for thus Cotgrave writes, two centuries since: *Despote*, as *despot*, the chief or sovereign lord of a country.—*Todd.*

Déspotat. *s.* See Despot, 1.

Despótic. *adj.* Absolute in power; unlimited in authority; arbitrary; irresponsible.

God's universal law
Gave to the man *despotick* power
Over his fema e. *Milton, Samson Agonistes*, 1053.

We may see in a neighbouring government the ill consequences of having a *despotick* prince, for notwithstanding there is vast extent of lands, and many of them better than those of the Swiss and Grisons, the common people among the latter are in a much better situation.—*Addison.*

Patriots were forced to give way to the madness of the people, who were now wholly bent upon single and *despotick* slavery.—*Swift.*

(See also first extract under Despotism.)

Despótical. *adj.* Same as Despotic: (this latter the *commoner* form).

In all its directions of the inferior faculties, reason conveyed its suggestions with clearness, and enjoined them with power: it had the passions in perfect subjection; though its command over them was but persuasive and political, yet it had the force of coactive and *despotical.—South.*

Despótically. *adv.* In a despotic manner.

Fortescue well distinguished between a monarchy *despotically* regal, and a political or civic monarchy.—*Burke.*

Déspotism. *s.* State, domain, or rule of a despot; autocratic, or tyrannical, character of a government.

He [William the Conqueror] permitted no rapine but his own. The feuds of private revenge, the lawlessness of robbery, were repressed. But this was the tranquillity of an imperious and vigilant *despotism*, the degree of which may be measured by these effects, in which no improvement of civilization has any share.... From the reign of Stephen ... we are enabled to trace the character of the government by existing records.... It was not a sanguinary *despotism*.... It [Magna Charta] is still the keystone of English liberty ... and, if every subsequent law were to be swept away, there would still remain the bold features which distinguish a free from a *despotic* monarchy.—*Hallam, View of the State of Europe during the middle Ages*, pt. ii. ch. viii.

In his [Bodin's] chapter on despotic monarchy, he again denies that governments were founded on original contract. The power of one man, in the origin of political society, was absolute; and Aristotle was wrong in supposing a fabulous golden age, in which kings were chosen by suffrage. *Despotism* is distinguished from monarchy by the subjects being truly slaves, without a right over their properties; but as the despot may use them well, even this is not necessarily a tyranny. Monarchy, on the other hand, is the rule of one man according to the law of nature, who maintains the liberties and properties of others as much as his own. As this definition does not imply any other restraint than the will of the prince imposes on himself, Bodin labours under the same difficulty as Montesquieu. Every English reader of the 'Esprit des Loix' has been struck by the want of a precise distinction between *despotism* and monarchy. Tyranny differs, Bodin says, from *despotism*, merely by the personal character of the prince. But severity towards a seditious populace is not tyranny; but here he censures the lax government of Henry II. Tyrannicide he justifies in respect of an usurper who has no title except force; but not as to lawful princes, or such as have become so by prescription.—*Id., Introduction to the Literature of Europe in the fifteenth, sixteenth, and seventeenth Centuries*, pt. ii. ch. iv. § 51.

Desynónymizing. *verbal abs.* Process by which a word is desynonymized; act of one who desynonymizes.

By and bye, however, as a language becomes itself an object of closer attention, at the same time that society, advancing from a simpler to a more complex state, has more things to designate, more thoughts to utter, and more distinctions to draw, it is felt a waste of resources to employ two or more words for the signifying of one and the same object. Men feel, and rightly, that with a boundless world lying around them and demanding to be named, and which they only make their own in the measure and to the extent that they do name it, with infinite shades and varieties of thought and feeling subsisting in their own minds, and claiming to find utterance in words, it is a mere and wanton extravagance to expend two or more signs on that which could adequately be set forth by one—an extravagance in one part of their expenditure, which will be almost sure to issue in, and to be punished by, a corresponding scantness and straitness in another. Some thought or feeling will wholly want its adequate sign, because another has two. Hereupon that which has been well called the process of '*desynonymizing*' begins—that is, of gradually discriminating in use between words which have hitherto been accounted perfectly equivalent, and, as such, indifferently employed. It is a positive enriching of a language when this process is at any point felt to be accomplished, when two or more words, once promiscuously used, are felt to have had each its own

peculiar domain assigned to it, which it shall not itself overstep, upon which the others shall not encroach. This may seem at first sight but as a better regulation of old territory; for all practical purposes it is the acquisition of new. It is not to be supposed that this *desynonymizing* process is effected according to any prearranged purpose or plan. . . . It is to Coleridge we owe the word *desynonymize*, against which indeed purists will object that it is of hybrid formation, the prefix Latin, the body of the word Greek; and his own contributions direct and indirect in this province are perhaps both more in number and more important than those of any other English writer; as, for instance, the disentanglement of 'fanaticism' and 'enthusiasm,' which we mainly owe to him; of 'keenness' and 'subtlety,' 'poetry' and 'poesy;' and that on which he himself laid so great a stress, 'reason' and 'understanding.' —*Archbishop Trench, Lectures on the Study of Words*, lect. vi.

Devêlop. *v. a.* [Fr. *développer.*]

1. Disengage an object from that which enfolds or covers it so as to conceal its character: (such as *clothes*, outer *leaves* of a flowerbud, or anything which envelopes).

Take him to *develope*, if you can,
And hew the block off and get out the man.
Pope, Dunciad.

2. In its later sense, and one which is now common, not only in biological science, but also in historical, political, and theological literature, this notion of the exhibition of the object developed being effected by taking away its *external* parts is superseded by that of growth determined by either *internal* influences, or some so-called final cause; development meaning growth with the full progress and advancement proper to the original idea, intention, or powers *in posse* of the object developed.

With the great accession of facts with which comparative anatomy has since been enriched ... we may now attempt a more exact enunciation of the resemblance which a higher organised animal presents to those of a lower order in its progress to maturity.... All animals resemble each other at the earliest period of their *development*.... The Bryozoa, after simulating the higher Infusoria by their spheroid shape and active movements, ... mask their low molluscous character beneath the polype form. The ascidian mollusks typify more feebly and transiently the polype state; ... the bivalve retaining the acephalous condition, the univalve ascending in its *development* to the acquisition of its appropriate head, jaws, and organs of sense. Thus all mollusks are at one period like monads, at another are acephalous; but few typify the polypes, and none the acalephes, or echinoderms. In the encephalous division we meet with many interesting examples of the prevalence of unity of organisation at early periods, which is lost in the diversity of the special forms as *development* proceeds.... Thus, as we trace the *development* of the molluscous animal, we find the application of the term unity of organisation progressively narrowed as *development* advances: for whilst all mollusks manifest, at their earliest and most transitory period, a resemblance to the lowest or monadiform zoophytes, only the lowest order of mollusks in the next stage of *development* represents the polypes; and all analogy to the radiated type is afterwards lost, until we reach the summit of the molluscous series.... In the great articulated branch of the animal kingdom there is unity of organisation with the molluscous series at the earliest periods of *development*, in so far as the germ divides and subdivides and multiplies itself. ... Unity of organisation prevails through a very great proportion of the articulate series in reference to their primitive condition as apodal worms. Only in the higher arachnids, the nucleated cells are aggregated under a form more nearly like that of the mature animal.... In lower or more vermiform condylopods, the rudimental conditions of the locomotive appendages, which are retained in the anellides and the lower crustaceans, are passed through in the progress of the *development* of the complex-jointed limbs. In the great series of air-breathing insects, we have seen that the diverging branch of the myriapods manifests at an early period the prevailing hexapod type, and that all insects are at first apterous, and acquire the jointed legs before the wings are fully *developed*.... It will be found when we enter upon the consideration of the *development* of the vertebrate embryo, that its unity of organisation with the Invertebrata is restricted to as narrow and transitory a point as that of the articulate with the molluscous series. ... Thus every animal in the course of its *development* represents some of the permanent forms of animals inferior to itself.... Other forms are represented less exclusively in the *development* of the animal kingdom, and may be regarded as secondary forms. These are, the polype, the worm, the tunicary, and the lamprey; they are secondary in relation to the animal kingdom at large, but are primary in respect of the primary divisions or provinces. Thus the Radiata, after having passed through the monad-stage, enter that of the polype; many there find their final *development*; others proceed to be metamorphosed into the acalephe or the echinoderm. The Articulata, at an early stage of their *development*, assume the form or condition of the apodal and acephalous worm; some find their mature *development* at that stage, as the parasitic Entozoa; others proceed to acquire annulations, a head, rudimental feet, jointed feet, and finally wings: radiating in various directions and degrees from the primary or fundamental form of their sub-kingdom. The Mollusca pass from the condition of the ciliated monad to that of the shell-less acephalan, and in like manner either remain to work out the perfections of that stage, or diverge to achieve the *development* of shells, of a head, of a pair of fins, of a ventral foot, or of cephalic arms, with all the complexities of organisation which have been demonstrated in the concluding lectures of this course. The vertebrated germ having manifested its monadiform relations by the spontaneous fission, growth, and multiplication of the primordial nucleated cells, next assumes, by their metamorphosis and primary arrangement, the form and condition of the finless cartilaginous fish, from which fundamental form *development* radiates in as many and diversified directions and extents, and attains more extraordinary heights of complication and perfection than any of the lower secondary types appear to be susceptible of.—*Owen, Lectures on Comparative Anatomy*, lect. xxiv. concluding summary.

Devélopment. *s.* Process by which anything is developed; developmental growth.

A man born without the capacity for external sensations would also be of necessity soulless and mindless, because, though not the single source of all our thoughts and faculties, the senses are yet the necessary condition of their *development*.... Speech is undoubtedly the product of the thinking spirit, but this spirit received the first impulse of *development* from the impressions of the outer world and the needs of practical life.—*Farrar, Chapters on Language*, ch. v.

(See also extract under preceding entry.)

Devélopmental. *adj.* Connected with, characteristic of, or formed by, development.

As that which is engendered by a mammal is mammalian from its beginning, each step of its building up has the finishing of the mammal for its end, and shows it the more as it nears the goal. [*Device.*—Two senses of the word must be distinguished; 1. That of French *devise*, a posie, emblem, conceit, coat, or cognisance borne [to distinguish an individual, or a party] (Cotgrave); and 2. A contrivance. The first of these is derived from a fashion prevalent in Italy about the 13th century, of wearing suits with the two halves of the body of different colours, by which the retainers of a particular house were distinguished. These uniforms were called *vesti* or *panni divisati*, *vesti alla divisa*, the colours adopted for the purpose constituting the *partita*, *divisa*, or *device* of the livery.... *Devis device*, in the sense of arrangement or contrivance is the Italian *divisare*, to think, imagine; devise

also to appear, to seem unto, and also [to communicate one's thoughts] to discourse. (Florio.) French, *deviser*, to commune, discourse, also to order, digest, dispose of. (Cotgrave.) The origin is the Latin *visum*, Italian *viso*, what appears to one, view, opinion; to *devise*, to arrange one's thoughts; to *devise* by will, to express the intentions of the testator as to the way in which his property is to go. Under the present head may be explained the expression *point device*, which has been much misunderstood. The French *deviser* is to imagine, to plan, and *à devise* is used as a superlative of praise.

'Un noble château *à devise*.'
(Fab. et Contes, iii. 155.)

'Li vergiers fut biau *à devise*.' (Ib. iii. 115.)

The garden was fair as could be imagined, or as we say with greater exaggeration, fair beyond imagination.

'—— went down in their barges to Greenwich, and every barge as goodly drest *as they could device*.' (Chron. H vi, ii. in Cam. Miscell. iv.)

'Ele fut portraite *à devis*;——
N'est cuens ni rois ni amirés
Qui seust deviser tant bele
En nule terre come cele.——
Bien fu fete par grant maitrise
Nature la fist *à devise*.'
(Fab. et Contes, iii. 424.)

She was a specimen of the beau ideal; no count, or king, or admiral, could imagine one so fair.

On the other hand *point* is used in the sense of condition; *en bon point*, in good condition; *mettre à point*, to put into condition, to dress. *À point, devise* then would signify, in the condition of ideal excellence, precisely the sense in which *point device* is always used.

'So noble was he of his stature,
So faire, so jolie and so fetise,
With limmis wrought *at poinct device*.'
(R. R. 830.)

A crown,
Golden in shew, is but a wreath of thorns;
Brings dangers, troubles, cares, and sleepless nights
To him who wears the regal *diadem.*
Milton, Paradise Regained, ii. 459.

A list the coblers' temples ties,
To keep the hair out of their eyes;
From whence 'tis plain the *diadem*,
That princes wear, derives from them. *Swift.*

Díadem. *v. a.* Adorn with a diadem. *Rhetorical.*

Not so, when *diadem'd* with rays divine,
Touch'd with the flame that breaks from virtue's shrine,
Her priestless muse forbids the good to die,
And opes the temple of eternity. *Pope.*

Díadrom. *s.* [Gr. διάδρομος = running across.] Time in which any cross motion is performed; time in which a pendulum performs its vibration; space passed through in its performance.

A gry is one tenth of a line, a line one tenth of an inch, an inch one tenth of a philosophical foot, a philosophical foot one third of a pendulum; whose *diadroms*, in the latitude of forty-five degrees, are equal to one second of time, or a sixtieth of a minute.—*Locke.*

Diagnóse. *v. a.* and *v. n.* Distinguish in general; distinguish a disease by its symptoms. See Diagnosticate.

Diagnósis. *s.* [Gr. = distinction, discrimination.] In *Medicine.* Study of the characteristic or pathognomonic symptoms by which the nature of the disease and its nosological position are ascertained; distinction of diseases.

To ascertain the seat and kind of the disease under which our patient is labouring [is] in technical language to pronounce the *diagnosis.—Watson, Lectures on the Principles and Practice of Physic*, lect. viii.

Diagnóstic. *adj.* Relating to, or consisting of, diagnosis.

It is mainly to this imperfection in the *diagnostic* part of medicine that we must attribute [its] uncertainty and variation.—*Watson, Lectures on the Principles and Practice of Physic*, lect. viii.

Diagnósticate. *v. a.* and *v. n.* [Both this and Diagnose, the more colloquial word of the two, are, as compared with *Diagnosis* and *Diagnostic*, rare words; it being the practice in writing to avoid them either altogether or by a periphrasis, and that rightly. In favour of Diagnosticate there is the analogy of *Prognosticate*; itself a hybrid word, i. e. one with *pro-* and *-gnostic-* from the Greek, and *-ate* from the Latin.] Same as Diagnose.

Diagnóstics, more rarely **Diagnóstic** [see Chromatics.] *s.* Division of medicine consisting in the study of symptoms by which one disease is distinguished from an other; symptomatology.

I shall lay down some indisputable marks of this vice, that whenever we see the tokens, we may conclude the plague is in the house: ... let us hear your *diagnosticks.—Collier, Essay on Pride.*

Sir Thomas Millington, who was physician in ordinary to the King, thought that she [Queen Mary] had the measles. But Radcliffe, who, with coarse manners and little book learning, had raised himself to the first practice in London chiefly by his rare skill in *diagnostics*, uttered the more alarming words, small pox.—*Macaulay, History of England*, ch. xx.

Diágonal. *adj.* [Fr. *diagonale*; Gr. γωνία = angle.] Reaching from one angle to another, so as to divide a parallelogram into equal parts.

The monstrosity of the badger is ill-contrived, and with some disadvantage; the shortness being fixed unto the legs of one side, that might have been more properly placed upon the *diagonal* movers.—*Sir T. Browne, Vulgar Errours.*

Diágonal. *s.* Line drawn from angle to angle, and dividing a square into equal parts.

When a man has in his mind the idea of two lines, viz. the side and *diagonal* of a square, whereof the *diagonal* is an inch long, he may have the idea also of the division of that line into a certain number of equal parts.—*Locke.*

Diágonally. *adv.* In a diagonal manner.

The right and left are not defined by philosophers according to common acceptation, that is, respectively from one man unto another, or any constant site in each, as though that should be the right in one, which, upon confront or facing, stands athwart or *diagonally* unto the other; but were distinguished, according unto their activity and predominant locomotion, on the either side.—*Sir T. Browne, Vulgar Errours.*

Díagram. *s.* [Gr. διάγραμμα = line drawn through.] Delineation of a geometrical figure; mathematical scheme; scheme, table, or illustration in general, wherein the bounding lines, or outlines, are either exclusively or chiefly delineated.

Many a fair precept in poetry is like a seeming demonstration in the mathematicks; very specious in the *diagram*, but failing in the mechanick operation.—*Dryden.*

Why do not these persons make a *diagram* of these cogitative lines and angles, and demonstrate their properties of perception and appetite, as plainly as we know the other properties of triangles and circles?—*Bentley.*

Thus Dr. Dalton, in his Elements of Chemistry, in which he gave to the world the Atomic Theory as a representation of the doctrine of definite and multiple proportions, also published a large collection of *diagrams*, exhibiting what he conceived to be the configuration of the atoms in a great number of the most common combinations of chemical elements.—*Whewell, History of Scientific Ideas*, b. vii. ch. iii.

The Revolution had found him [Montague] a young student in a cell by the Cam, poring on the *diagrams* which illustrated the newly discovered laws of centripetal and centrifugal force, writing little copies of verses, and indulging visions of parsonages with rich glebes, and of closes in old cathedral towns; had developed in him new talents; had held out to him the hope of prizes of a very different sort from a rectory or a prebend.—*Macaulay, History of England*, ch. xxiv.

Diagrýdiate. *s.* Purgative medicine either consisting of, or containing, Diagrydium, i.e. Scammony. *Obsolete.*

O, gentlemen, the time of life is short:
To spend that shortness basely were too long,
Though life did ride upon a *dial's* point,
Still ending at th' arrival of an hour.
Shakespear, Henry IV. Part I. v. 2.

If the motion be very slow, we perceive it not: we have no sense of the accretive motion of plants or animals; and the sly shadow steals away upon the *dial*, and the quickest eye can discover no more but that it is gone.—*Glanville.*

Dialect. *s.* [Gr. διάλεκτος.]

1. Variety or subdivision of a language.

Hardly had Aristotle and Demosthenes ceased to write when that Attic which had been gradually formed into such a noble instrument of thought in the hands of Aristophanes, Euripides, Plato, and the orators, and had come to supersede for general use all the other *dialects*, became at the same time the language of the civilised world and was stricken with a mortal decay.—*Munro, Translation of Lucretius*, pref

When themselves do practise that whereof they write, they change their *dialect*; and those words they shun, as if there were in them some secret sting.—*Hooker, Ecclesiastical Polity.*

Dialéctical. *adj.* [from Gr. διαλεκτικά = dialectics.] Logical.

Those *dialectical* subtleties that the schoolmen employ about physiological mysteries, more declare the wit of him that uses them, than increase the knowledge of sober lovers of truth.—*Boyle.*

Dialéctical. *adj.* [from Gr. διάλεκτος = dialect.] Respecting dialects, or the subdivisions of a language.

Dr. Johnson was scarcely at all aware of the authenticity of ancient *dialectical* words, and therefore seldom gives them any place in his dictionary.—*Pegge, Anecdotes of the English Language.*

[In speaking of *dialects* this is, probably, the commoner form; though, except as an artificially differentiated word, it has no advantage over Dialectic. A definitely distinct and generally recognized adjective corresponding to (provincial) *dialect* is one of the desiderata of the English language.]

Dialectician. *s.* Logician.

But aware as I am in common with the great poetical *dialectician* [Dryden], and, indeed, with every novice in the art of logic, that 'fallacies often live in universals,' I cannot accede to Mr. Burke's observation.—*Dr. Parr, Sequel to the Printed Paper.* (Rich.)

Dialéctics. *s.* Logic; science of reasoning justly.

Had Bacon lived in the present day, I am inclined to think he would have made his chief complaint against unmethodized inquiry and illogical reasoning. Certainly he would not have complained of *dialectics* as corrupting philosophy. To guard now against the evils prevalent in his time, would be to fortify a town against battering-rams, instead of against cannon.—*Whately, Introductory Lectures on Political Economy*, lect. ix.

Dialing. *s.* Construction of dials.

This hypothesis may be tolerated in physics, as it is not necessary in the arts of *dialling* or navigation to mention the true system or earth's motion.—*Bishop Berkeley, Siris*, § 285.

Dialogist. *s.* Speaker in a dialogue or conference; writer of dialogues.

The like doth Cicero assert in many places, sometimes in the persons of his *dialogists*, sometimes according to his own sense.—*Barrow, Sermons*, vol. ii. serm. viii.

I am very far from conceitedly insinuating, that this *dialogist* is the only person who hath managed the dispute, I speak of, with candour.—*Skelton, Deism revealed*, pref.

Dialogistical. *adj.* Speaking in dialogue.

(For example see extract under Diffusible.)

Diamagnétic. *adj.* Connected with, relating to, or consisting in, the opposition of certain bodies under certain conditions to others which comport themselves Magnetically. See extract. (The word, both recent and limited to *Physics*, has *Diamagnetics* and *Diamagnetism* for its congeners.)

In the paper on 'New Magnetic Actions' it is shown that every substance placed between the poles of a powerful magnet is influenced in one of two ways: it either takes a position coincident with the magnetic forces, as is the case with a bar of iron, and other bodies usually called magnetic; or it places itself at right angles to the line of forces, as is the case with a bar of glass, of bismuth, and, apparently, of every other body: the former of these bodies the author [Faraday] distinguishes as magnetics, the latter as *diamagnetics*, and the respective positions between the poles are termed axial and equatorial; . . . the number of simple magnetics is very limited, . . . all other bodies are *diamagnetic*, corresponding to bismuth, but with varying intensities.—*Brande, Chemistry*, as a notice of a paper by *Faraday*, in *Philosophical Transactions*, pt. i. p. 258.

1. Having the qualities of a diameter; relating to a diameter. *Rare.*

That conjunction or opposition maketh an eclipse which is *diametral*, that is, when the center of the earth and the centers of both the luminaries shall be in the same line, which happeneth to be there only where the moon's eccentrick cutteth the sun's in that line, which is therefore called the ecliptick.—*Gregory, Posthuma*, p. 130: 1650.

2. Opposite; extremely different.

There are gentlewomen and male guests,
Of several humours, carriage, constitution,
Profession too; but so *diametral*
One to another, and so much oppos'd,
As if I can but hold them altogether,
And draw 'em to a sufferance of themselves
But till the dissolution of the dinner,
I shall have just occasion to believe
My wit is magisterial. *B. Jonson, Magnetick Lady.*

Your own oppositions [are] direct and *diametral* to God and his holy law.—*Archbishop Sancroft, Sermons*, p. 79.

Diámetrally. *adv.* In a diametral manner; according to the direction of a diameter; in direct opposition. *Rare.*

Diamétrically. *adv.* In a diametrical manner; extremely (always with the idea of *opposition* or *difference*, the most distant points of a circle being those at the extremities of the diameter).

He persuaded the king to consent to what was *diametrically* against his conscience and his honour.—*Lord Clarendon, History of the Grand Rebellion.*

The real leaders of the party, as far as it can be said to have had leaders, were men bred in principles *diametrically* opposed to Toryism, men who had carried Whiggism to the verge of republicanism, and who had long been considered not merely as Low Churchmen, but as more than half Presbyterians. Of these men the most eminent were two great Herefordshire squires, Robert Harley and Paul Foley.—*Macaulay, History of England*, ch. xx.

Diamond. *s.* [Fr. *diamant*; Lat. *adamas*.]

1. Gem so called.

Give me the ring of mine you had at dinner;
Or, for my *diamond*, the chain you promised.
Shakespear, Comedy of Errors, iv. 3.

The *diamond*, the most valuable and hardest of all the gems, is, when pure, perfectly clear and pellucid as the purest water; and is eminently distinguished from all other substances by its vivid splendour, and the brightness of its reflexions. It is extremely various in shape and size, being found in the greatest quantity very small, and the larger ones extremely seldom met with. The largest ever known is that in the possession of the Great Mogul, which weighs two hundred and seventy-nine carats, and is computed to be worth seven hundred and seventy-nine thousand two hundred and forty-four pounds. The *diamond* bears the force of the strongest fires, except the concentrated solar rays, without hurt; and even that infinitely fiercest of all fires does it no injury, unless directed to its weaker parts. It bears a glass-house fire for many days, and if taken carefully out and suffered to cool by degrees, is found as bright and beautiful as before; but if taken hastily out, it will sometimes crack, and even split into two or three pieces. The places where we have *diamonds* are the East Indies and the Brasils; and though they are usually found clear and colourless yet they are sometimes slightly tinged with the colours of the other gems, by the mixture of some metalline particles.—*Sir J. Hill, On Fossils.*

The *diamond* is preferable and vastly superiour to all others in lustre and beauty; as also in hardness, which renders it more durable and lasting, and therefore much more valuable than any other stone.—*Woodward, On Fossils.*

2. Figure like that of the ace of diamonds in cards.

3. Glazier's tool for cutting glass.

The glazier's *diamond* is the natural diamond so set that one of its edges is brought to bear on the glass. The extreme point of any *diamond* will scratch glass, making a white streak; but when the rounded edge of a *diamond* is slid over a sheet of glass with but slight pressure, it produces a cut which is scarcely visible, but which really extends through the mass. Dr. Wollaston succeeded in giving to the ruby, topaz, and rock crystal, forms similar to that of the diamond, and with these he succeeded in cutting glass, proving that this useful property of the diamond depended on its form. . . . The irregular octahedrons with round facets are those proper for glazier's *diamonds*. . . . Notwithstanding the hardness of the diamond, yet in large glassworks as many as one or two dozens are worn out every week.—*Ure, Dictionary of Arts, Manufactures, and Mines.* (Hunt.)

Diámonded. *adj.* In squares like diamonds.

Break a stone in the middle, or lop a bough of a tree, and one shall behold the grain thereof (by some secret cause in nature) *diamonded* or streaked in the fashion of a lozenge.—*Fuller, Profane State*, p. 368.

Diapase. *s.* Same as Diapason.

And 'twixt them both a quadrant was the base,
Proportion'd equally by seven and nine;
Nine was the circle set in heaven's place,
All which compacted made a good *diapase*. *Spenser.*

Díapasm. *s.* [Gr. διάπασμα, from πάσσω = sprinkle.] Powderpuff.

There is an excellent *diapasme*, in a chaine too, if you like it.—*B. Jonson, Cynthia's Revels*, v. 4. (Rich.)

It discovereth the true coincidence of sounds into *diapasons*, which is the return of the same sound.—*Bacon.*

Harsh din
Broke the fair musick that all creatures made
To their great Lord, whose love their motion sway'd
In perfect *diapason*, whilst they stood
In first obedience, and their state of good.
Milton, Ode at a solemn Musick, 20.

Many a sweet rise, many as sweet a fall,
A full-mouth *diapason* swallows all. *Crashaw.*

From harmony, from heav'nly harmony,
This universal frame began:
From harmony to harmony
Through all the compass of the notes it ran,
The *diapason* closing full in man. *Dryden.*

Diapason denotes a chord which includes all tones: it is the same with that we call an eighth, or an octave; because there are but seven tones or notes, and then the eighth is the same again with the first. —*Harris.*

Díaper. *s.* [Fr. *diapré*.—see last extract.]

1. Linen cloth woven in flowers and other figures; finest species of figured linen after damask.

Not any damsel, which her vaunteth most

Might in their diverse cunning ever dare
With this so curious net-work to compare.
Spenser.

Full of rose-water, and bestrew'd with flowers;

Covered with cloth of gold *diapred* well.'
(Chaucer, Knight's Tale.)

French *diaspré*, variegated, 'versicolor instar jaspidis.' (Ducange.) In Old English poetry a meadow is frequently spoken of as *diapered* with flowers. At a later period the reference to different colours was lost, and the sense was confined to the figures with which a stuff was ornamented. French *diapré*, diapered, diversified with flourishes on sundry figures. (Cotgrave.) As now understood it is applied to linen cloth, woven with a pattern of diamond-shaped figures.—*Wedgwood, Dictionary of English Etymology.*]

Diaphanéity. *s.* Transparency. *Rare.*

Because the outward coat of the eye ought to be pellucid, to transmit the light, which, if the eyes should always stand open, would be apt to grow dry and shrink, and lose their *diaphaneity*; therefore are the eyelids so contrived as often to wink, that so they may, as it were, glaze and varnish them over with the moisture they contain.—*Ray.*

Diaphánic. *adj.* [Gr. διά = through, and φαίνω = show; nearly the equivalent to the Latin *trans* = across, and *pareo* = *appareo* = appear.] Transparent or Translucent: (probably used without the distinction between the two being recognized).

But the beauty of the countenance was not the beauty of the Saxons. It was a radiant face, one of those that seem as if touched in their cradle by a sunbeam, and to have retained all its brilliancy and suffused and mantling lustre. One marks sometimes such faces, *diaphanous* with delicate splendour, in the southern regions of France. Her eye too was the rare eye of Aquitaine; soft and long, with lashes drooping over the cheek, dark as her clustering ringlets.—*Disraeli the younger, Coningsby*, b. iv. ch. iv.

Diaphorétical. *adj.* Sudorific.

Methinks there may be an excellent medicinal extraction drawn (by prudence directed by grace) out of the nature of temporal felicity, in order to the fortifying our minds, which may not improperly be called the spirit or salt of human frailty, since it may work upon the mind as physicians say those kind of *diaphoretical* medicines do upon the body.—*W. Montague, Devout Essays*, pt. i. p. 60: 1648.

The final *-ce*, though etymologically the *-s* of the ordinary plurals, is differentiated both in spelling and sound; the ordinary *-s* being sounded as *z* (*dies, pennies* = *dize, penniez*). Not to be confounded with the *-ce* in *mice*, which is part of the root, the change of import being denoted by the change of vowel.]

Dichótomize. *v. n.* Become dichotomous.

An analogous but more complicated structure obtains when the radiating, wavy, vertical plates of dentine *dichotomise*, and give off from their sides, throughout their course, numerous branch plates and processes, which are traversed by medullary sinuses and canals with their peripheral terminations dilated, and becoming the centres of lobes or columns of hard dentine. The transverse section of such teeth gives the appearance of branches of a tree, with leaf-stalks and leaves, radiating from the central pulp-cavity to the circumference of the tooth; and I have called the fossil fish in which this structure was first detected, Dendrodus. —*Owen, Lectures on Comparative Anatomy*, lect. ix.

Very few of the genera of plants, or even of the families, can be pronounced with certainty to be kinds. The great distinctions of vascular and cellular, *dicotyledonous* or exogenous and monocotyledonous or endogenous, are perhaps differences of kind: the lines of demarcation which divide those classes seem (though even on this I would not pronounce positively) to go through the whole nature of the plants. But the different species of a genus, or genera of a family, usually have in common only a limited number of characters.—*J. S. Mill, System of Logic.*

The great *dictator* of fashions, for all Europe,

And take your natural rest: then all this vanisheth.
B. Jonson, Staple of News.

Browne, Vulgar Errours.*

Is it such a fault to translate simulacra images? I see what a good thing it is to have a good catholick *dictionary.*—*Bishop Stillingfleet.*

An army, or a parliament, is a collection of men; a *dictionary*, or nomenclature, is a collection of words.—*Watts.*

Used *adjectivally*. As found or given in a dictionary, or in dictionaries generally.

None of the modes of assuming what should be proved are in more frequent use than what are termed by Bentham, 'question-begging appellatives;' names which beg the question under the guise of stating it. The most potent of these are such as have a laudatory or vituperative character. For instance, in politics, the word Innovation. The *dictionary* meaning of this term being merely 'a change to something new,' it is difficult for the defenders even of the most salutary improvement to deny that it is an innovation; yet the word having acquired in common usage a vituperative connotation in addition to its *dictionary* meaning, the admission is always construed as a large concession to the disadvantage of the thing proposed.—*J. S. Mill, System of Logic*, v. 7.

Díctum. *s.* pl. *dicta.* [Lat. neuter of *dictus* = thing said.—see Diction.] Apophthegm.

The maxim resulting from the examination of a syllogism in the foregoing form, and of the application of which, every valid argument is in reality an instance, is, 'that whatever is predicated (i.e. affirmed or denied) universally, of any class of things, may be predicated, in like manner, (viz. affirmed or denied) of any thing comprehended in that class.' This is the principle, commonly called the 'dictum de omni et nullo,' for the indication of which we are indebted to Aristotle, and which is the keystone of his whole logical system. . . . The object of Aristotle's *dictum* is precisely analogous; . . . his design was to point out the general principle on which that process is conducted which takes place in each syllogism. And as the laws of nature (as they are called) are in reality merely generalized facts, of which all the phenomena coming under them are particular instances; so, the proof drawn from Aristotle's *dictum* is not a distinct demonstration brought to confirm another demonstration, but is merely a generalized and abstract statement of all demonstration whatever; and is, therefore, in fact, the very demonstration which (mutatis mutandis), accommodated to the various subject-matters, is actually employed in each particular case. . . . Some persons have remarked of the *dictum* (meaning it as a disparagement) that it is merely a somewhat circuitous explanation of what is meant by a class. It is, in truth, just such an explanation of this as is needful to the student, and which must be kept before his mind in reasoning.—*Whately, Elements of Logic*, b. i. § 4.

For example: in questions of language, the usage of the greater number is practically the standard of decision, according to the well-known *dictum* of Horace. In order that a person should be intelligible, it is necessary that he should conform to the grammatical forms and significations of words generally recognised by those whom he addresses.—*Sir G. C. Lewis, On the Influence of Authority in Matters of Opinion*, ch. vi.

Didáctic. *adj.* [Gr. διδακτικός, from root of διδάσκω = teach; διδασκαλία = teaching.] Teaching; preceptive; conveying instruction.

Díet. *s.* [Fr. *diette*; L.Lat. *dieta*, *dieta*, from *dies* = day; the original import of the word being the day fixed for some meeting, judicial or political, rather than the meeting itself.] Assembly, more especially of estates in the political sense of the term, either within the Germanic empire itself, or in the countries influenced by it; German, also Polish, parliament.

A *diet* at Aix-la-Chapelle was among the earliest acts of Louis the Pious. From this council commissioners were despatched throughout the empire to receive complaints and to redress all acts of oppression. . . . Louis the Pious held his plenary court a second time at Aix-la-Chapelle. The four great acts of this council were among the boldest and most comprehensive ever submitted to a great national assembly. The emperor was still in theory the sole legislator; not only were the secret suggestions, but the initiatory motions in the council, from the supreme power. It might seem, that in the three acts which regarded the hierarchy, the emperor legislated for the church; but it was in truth the church legislating for herself through the emperor. . . . The Council *Diet* of Aix-la-Chapelle, having thus legislated for the church, contemplated the dangers of the state.—*Milman, History of Latin Christianity*, b. v. ch. ii.

On such 'liberal' principles is the *diet* constituted that the most ignorant class in the province—ignorant to such an extent that it does not even look upon reading and writing as necessary qualifications in its deputies—elects 72 members, while the nobles—that is to say, all the old landed proprietors, great and small, have only 42 representatives, the townspeople only 22. The Universities of Cracow and Lemberg are represented through their rectors, who sit ex officio; the chambers of commerce of Lemberg, Cracow, and Brody send one member each to the *diet*, who is elected. But as the influence of the landed proprietors and citizens is negatived by that of the peasants, so is that of the educational and commercial bodies by a formidable clerical par[ty] consisting of three archbishops (one Roman Cath[olic], one United Greek, and one Armenian), and f[our] bishops (three Roman Catholic, and one Uni[ted] Greek). With the intelligence, patriotism, and [pro]perty of the country on the one side, but with[out] priests and peasants on the other, the governm[ent] putting its faith in numbers calculated and c[on]fully balanced beforehand, does not find the G[er]cian *diet* such a troublesome body as might h[ave] been expected.—*S. Edwards, Polish Captivity*, [vol.] ii. ch. iii.

4. Distinction: (with *between*).

Our constitution does not only make a *difference between* the guilty and the innocent, but even among the guilty, *between* such as are more or less criminal.—*Addison, Freeholder.*

In *Logic* this is often interchanged with the Latin form *differentia*.

... these predicables, genus and species are commonly said, in the language of logicians, to be predicated 'in quid'; i.e. to answer to the question, 'what?' as, 'what is Cæsar?' Answer, 'a man;' 'what is a man?' Answer, 'an animal;' *difference* in 'quale quid.' ... It is evident from what has been said, that the genus and *difference* put together make up the species. E.g. 'rational' and 'animal' constitute 'man.' ... But when logicians speak of species as a 'whole,' this is, properly, in reference to the genus and the *difference*; each of which denotes a 'part' of that species which we constitute by joining those two together. But then it should be remembered that a species is not a predicable in respect of its genus and *difference* (since it cannot be predicated of them), but only in respect of the individuals, or lower species, of which it can be predicated. ... When I say of a magnet, that it is 'a kind of iron-ore,' that is called its proximum-genus, because it is the closest (or lowest) genus that is predicated of it: 'mineral' is its more remote genus. When I say that the *differentia* of a magnet is its 'attracting iron,' and that its property is 'polarity,' these are called respectively a specific *difference* and property; because magnet is (I have supposed) an infima species (i.e. only a species). When I say that the *differentia* of iron ore is its 'containing iron,' and its property, 'being attracted by the magnet,' these are called respectively, a generic *difference* and property, because 'iron-ore' is a subaltern species or genus; being both the genus of magnet, and a species of mineral. ... An individual is so called because it is incapable of logical division; which is a metaphorical expression, to signify 'the distinct (i.e. separate) enumeration of several things signified by one common name.' This operation is directly opposite to generalization, (which is performed by means of 'abstraction;') for as, in that, you set aside the *differences* by which several things are distinguished, so as to call them all by one common name, so, in division, you select the *differences*, so as to enumerate them by their several distinct names. Thus, 'mineral' is said to be divided into 'earths, metals,' &c.; and metals again into 'gold, iron,' &c.; and these are called the parts (or members) of the division. ... You may say of a beast or bird that it is an 'animal;' and the term 'beast' implies not only the term 'animal,' but something more besides; namely, whatever '*difference*' characterizes 'beast,' and separates it from 'bird,' 'fish,' &c.—*Whately, Elements of Logic*, supplement to chap. i. § 3, 4, 5.

5. In the *plural*. Evidence of distinction; differential mark.

Henry had the title of sovereign, yet did not put those things in execution which are the true marks and *differences* of sovereignty.—*Sir J. Davies.*

6. In *Heraldry*. Figure added to coats of arms to distinguish one family from another, and to show how far distant younger branches are from the principal branch.

The original of *differences* is controverted. Camden will have them to have begun about the time of Richard I. Paradin assigns *differences* worn as early as the year 870. The president Fauchet observes *differences* to have been hereditary in the French families before the time of Louis le Gros, who came to the crown in the year 1110. Moreau refers them to the time of St. Louis; and Lallonette, Belleforest, &c., to that of Philip Augustus.—*Rees, Cyclopædia, Difference.*

7. Distinct kind, variety, or species. *Rare.*

This is notoriously known in some *differences* of brake or fern.—*Sir T. Browne, Vulgar Errours.*

8. In *Mathematics*. Excess of one quantity above another.

Difference. *v. a.* Cause a difference; make one thing not the same as another. Differentiate the *commoner* word.

You know it in common practice in your trades and merchandise, that when a man hath bought a parcel of commodities he sets his mark upon them, to distinguish them from the rest in the warehouse; so doth our God; he sets a mark upon his own; whereby they are plainly *differenced* from others.—*Bishop Hall, Remains*, p. 134.

In the Samson Agonistes, colloquial language is left at the greatest distance, yet something of it is preserved, to render the dialogue probable: in Massinger the style is *differenced*, but *differenced* in the smallest degree possible, from animated conversation by the vein of poetry.—*Coleridge, Table Talk.*

Different. *adj.*

1. Distinct; not the same.

There are covered galleries that lead from the palace to five *different* churches.—*Addison, Travels in Italy.*

2. Of contrary qualities.

The Britons change
Sweet native home *for* unaccustom'd air,
And other climes, where *diff'rent* food and soil
Portend distempers. *Philips.*

3. Unlike; dissimilar

Neither the shape of faces, nor the age, nor the colour, ought to be alike in all figures, any more than the hair; because men are as *different* from each other, as the regions in which they are born are *different*.—*Dryden, Translation of Dufresnoy's Art of Painting.*

Happiness consists in things which produce pleasure, and in the absence of those which cause any pain: now these, to *different* men, are very *different* things.—*Locke.*

Differéntial. *adj.*

1. Relating to, consisting in, or indicating, difference: (almost always with some specific application; generally in connection with *differentia*, in the logical sense of that term).

a. In *Mathematics*. To the *calculus of infinitesimals*, or the differential calculus.

Differential method is applied to the doctrine of infinitesimals, or infinitely small quantities, called the arithmetick of fluxions. It consists in descending from whole quantities to their infinitely small differences, and comparing together these infinitely small differences, of what kind soever they be: and from thence it takes the name of the *differential* calculus, or analysis of infinitesimals.—*Harris.*

b. In *Commerce*. To *duties* of a *compensatory* character.

Up to that year [1860] there existed a *differential* import duty on foreign paper, which had been imposed to countervail the export duties levied by almost every foreign government on rags—the raw material of the manufacture. One of the stipulations in the commercial treaty was that this duty should be removed, but by an unhappy oversight on the part of the negotiators of the treaty no attempt was made to secure the simultaneous abolition of the export duty on French rags. The consequence of the abolition of the import duty while the export duty on the raw material was retained could be easily foreseen, and it was in fact predicted. A great trade had grown up under the *differential* duty. The duty was suddenly withdrawn. The consumer would get his commodity cheaper, but the producer must work at lower profits and possibly be driven out of the market.—*Times*, May 24, 1865.

2. In *Meteorology*. See extract.

This instrument [the *differential* thermometer] consists of a glass tube bent twice at right angles, so that the balls—blown as near as possible of the same size—at its extremities, are on a plane with the instrument, and perpendicular to the stand on which it rests. The tube and part of a ball are filled with a coloured fluid, and the rest contains air. It is termed *differential* because its use is to distinguish between the temperatures of the balls: when one of these is affected by caloric, the expanded air depresses the fluid on that side and raises it on the other—the comparison therefore is between the aerial fluids in the separate bulbs of the instrument.—*Thompson, Introduction to Meteorology*, § 447.

Differéntially. *adv.* In a differential manner; in the way of differentiation.

Whether, as some contend, everything is explicable on the hypothesis of universal pressure, whence what we call tension results *differentially* from inequalities of pressure in opposite directions; or whether, as might be with equal propriety contended, things are to be explained on the hypothesis of universal tension, from which pressure is a differential result; or whether, as most physicists hold, pressure and tension everywhere co-exist; are questions which it is impossible to settle.—*Herbert Spencer, First Principles*, ch. x.

Differéntiate. *v. a.* Effect a differentia, or difference, in its logical sense, i. e. as a point of classification: (its chief special applications being in *Biology*, where it denotes the *changes* which result in the *development* of differential characters). As the process, being one of growth, is less noticed than the result, the *participial* or *adjectival* form is *commoner* than that of the ordinary verb.

Cypripedium, in having three stigmas developed, and therefore in not having a rostellum, in having two fertile anthers with a large rudiment of a third, and in the state of its pollen, seems a remnant of the order whilst in a simpler condition. . . . These broken groups do not indicate to us the structure of the common parent-form of all orchids, but they probably serve to show the state of the order in ancient times, when none of the forms had become so widely *differentiated* from each other and from other plants, as are the existing orchids, especially the Vandeæ and the Ophreæ; and when, consequently, the order made a nearer approach in all its characters, than at present, to such allied groups as the Marantaceæ.—*Darwin, Fertilisation of Orchids*, ch. vii.

Differentiátion. *s.* Determination by means of a change producing a differential character or logical *differentia*; state so produced.

The first distinction we noted between the kind of change shown in life, and other kinds of change, was its serial character: we saw that vital change is substantially unlike non-vital change, in being made up of successive changes. Now since organic bodies display in so much higher a degree than inorganic bodies, those continuous *differentiations* and integrations which constitute evolution, ... it is clear that in a given time, organic bodies must undergo changes so comparatively numerous as to render the successiveness of their changes a marked characteristic. ... We reached the conclusion, that a force falling on any aggregate is divided into se-

veral forces; that when the aggregate consists of parts that are unlike, each part becomes a centre of unlike *differentiations* of the incident force; and that thus the multiplicity of such *differentiations* must increase with the multiplicity of the unlike parts.—*Herbert Spencer, Data of Biology*, § 36.
(See also examples under Integration.)

Differently. *adv.* In a different manner.
He may consider how *differently* he is affected by the same thought, which presents itself in a great writer, from what he is when he finds it delivered by an ordinary genius.—*Addison.*

Differing. *part. adj.* Different.

Hope oft fancies that to be facile in the attainment, which reason in the event shows *difficile*: so as prudence we see is of force, where force prevails not.—*Sir T. Herbert, Relation of some Years' Travels into Africa and the Great Asia*, p. 88.
That that should give motion to an unwieldy bulk, which itself hath neither bulk nor motion, is of as *difficile* apprehension as any mystery in nature.—*Glanville, Scepsis Scientifica.*

With the *accent* on the *second* syllable.
Latin was no more *difficil*,
Than for a blackbird 'tis to whistle.
Butler, Hudibras.

2. Scrupulous; hard to be persuaded.

Difficileness. *s.* Attribute suggested by Difficile; incompliance; impracticability. *Rare.*
There be that in their nature do not affect the good of others: the lighter sort of malignity turneth but to a crossness, or frowardness, or aptness to oppose, or *difficileness*, or the like; but the deeper sort, to envy and mere mischief.—*Bacon, Essay of Goodness.*

Difficult. *adj.* Hard; not easy; not facile.
If it be *difficult* [in the margin] in the eyes of this people.—*Zachariah*, viii. 6.

Difficult. *v. a.* Render difficult. *Rare.*
Their excellencies having desisted from their pretensions, which had *difficulted* the peace.—*Sir W. Temple, Works*, ii. 484. (Ord MS.)
The late lord chancellor Thurlow was fond of using the verb *difficult*; as, he *difficulted* the matter; but he was pronounced unjustifiable in this usage. The old French verb, we see, upholds him; and the old English offers a synonyme.—*Cotgrave and Sherwood.*

Difficultly. *adv.* In a difficult manner; hardly; not easily.
A man who has always indulged himself in the full enjoyment of his station, will *difficultly* be persuaded to think any methods unjust that offer to continue it.—*Rogers, Sermons.*

Difficulty. *s.*
1. Hardness; contrariety to easiness or facility; anything hard to accomplish.
The religion which, by this covenant, we engage ourselves to observe, is a work of labour and *difficulty*; a service that requires our greatest care and attention.—*Rogers.*
They mistake *difficulties* for impossibilities: a pernicious mistake certainly; and the more pernicious, for that men are seldom convinced of it, till their convictions do them no good.—*South, Sermons.*

With *under*.
They lie *under* some *difficulties*, by reason of the emperour's displeasure, who has forbidden their manufactures.—*Addison, Travels in Italy.*

2. Objection; cavil.
Men should consider, that raising *difficulties* concerning the mysteries in religion, cannot make them more wise, learned, or virtuous.—*Swift.*

In difficulties. Embarrassed: (mostly from an urgent need of money).

To intromit true light.

The man *diffides* in his own augury,
And doubts the gods. *Dryden.*

Diffidence. *s.*
1. Distrust; want of confidence in others.
No man almost thought himself secure, and men durst scarce commune or talk one with another; but there was a general *diffidence* every where.—*Bacon, History of the Reign of Henry VII.*
You have brought scandal
To Israel, *diffidence* of God and doubt
In feeble hearts. *Milton, Samson Agonistes*, 453.

2. Doubt; want of confidence in ourselves.
If the evidence of its being, or that this is its true sense, be only on probable proofs, our assent can reach no higher than an assurance or *diffidence*, arising from the more or less apparent probability of the proofs.—*Locke.*

And speak, though sure, with seeming *diffidence.*
Pope.

Diffident. *adj.*

Diffluency. *s.* [Lat. *diffluentia* = flowing off in different directions.] Quality of falling away on all sides; effect of fluidity, as opposed to consistency. *Rare.*
Ice is water congealed by the frigidity of the air, whereby it acquireth no new form; but rather a consistence or determination of its *diffluency.*—*Sir T. Browne, Vulgar Errours.*

Difform. *adj.* [Lat. *difformis.*] Having parts of different structures; dissimilar; unlike; irregular: (opposed to *uniform*).
The unequal refractions of *difform* rays proceed not from any contingent irregularities: such as are veins, an uneven polish, or fortuitous position of the pores of glass.—*Sir I. Newton.*

Necessity, absolute in itself, is simple and uniform and universal, without any possible difference, *difformity*, or variety whatsoever.—*Clarke, Demonstration of the Being and Attributes of God*, § 7.

Diffuse. *adj.* [Lat. *diffusus*, pass. part. of *diffundo* = pour, or spread by pouring, in different directions.]

The reasoning of them is sophistical and inconclusive; the style *diffuse* and verbose.—*J. Warton, Essay on Pope.*

2. Difficult; tedious.
John Lydgate
Writeth after an higher rate;
It is *diffuse* to fynde
The sentence of his mind. *Skelton, Poems*, p. 237.

Diffuse. *v. a.* [Lat. *diffusus* = poured out so as to spread in different directions.]
1. Pour out upon a plane, so that the liquor may run every way; pour without particular direction.
When these waters began to rise at first, long before they could swell to the height of the mountains, they would *diffuse* themselves every way.—*T. Burnet, Theory of the Earth.*

2. Spread; scatter; disperse.
That iron man
With his huge flail began to lay about;
From whose stern presence they *diffused* ran,
Like scatter'd chaff, the which the wind away doth fan. *Spenser, Faerie Queen*, v. 11, 47.

Diffused. *part. adj.*
1. Extended; at full length.

And everything that seems unnatural.
Id., Henry V. v. 2.

Diffuseness. *s.* Attribute suggested by Diffuse.
Though his works are voluminous, Cujacius has not the reputation of *diffuseness*; on the contrary, the art of lucid explanation with brevity is said to have been one of his great characteristics.—*Hallam, Introduction to the Literature of Europe in the fifteenth, sixteenth, and seventeenth Centuries*, pt. ii. ch. iv. s. 3, § 76.

Diffuser. *s.* One who diffuses.
If the Jews were such *diffusers* of secular learning, why are the wisest men of their own nation, such as Joseph, Moses, Solomon, and David, characterised and deciphered *to us* in the Bible with a comparison so advantageous to the wisdom of other nations; as, that they were skilled in all the wisdom of the Egyptians, that their wisdom excelled all the wisdom of the east countries and of Babylon?—*Mannyngham, Discourses*, p. 32: 1681.

Diffusibility. *s.* Capability of being diffused; readiness to diffuse itself.
(For example see extract under next entry.)

Diffusible. *adj.* Capable of diffusion.
But the fact of chief interest to us here, is that the relatively small-atomed crystalloids have immensely greater diffusive power than the relatively large-atomed colloids. Among the crystalloids themselves, there are marked differences of *diffusibility*; and among the colloids themselves, there are parallel differences, though less marked ones. But these differences are small compared with that between the *diffusibility* of the crystalloids as a class, and the *diffusibility* of the colloids as a class. Hydrochloric acid is seven times as *diffusible* as sulphate of magnesia; but it is fifty times as *diffusible* as albumen, and a hundred times as *diffusible* as caramel. These differences of *diffusibility* manifest themselves with nearly equal distinctness, when a permeable septum is placed between the solution and the water. And the result is, that when a solution contains substances of different *diffusibilities* the process of *dialysis*, as Professor Graham calls becomes a means of separating the mixed substances: especially when such mixed substances are partly crystalloids and partly colloids.—*Herbe Spencer, Data of Biology.*

Diffusion. *s.* Dispersion; state of being scattered every way.
Whereas all bodies act either by the communication of their natures, or by the impressions or signatures of their motions, the *diffusion* of species visible seemeth to participate more of the former operation, and the species audible of the latter.—*Bacon, Natural and Experimental History.*

Diffusive. *adj.*
1. Having the quality of scattering anyth every way.
Diffusive of themselves, where-e'er they pass
They make that warmth in others they expect:
Their valour works like bodies on a glass,
And does its image on their men project. *Dryden.*

2. Scattered; dispersed; having the quality of suffering diffusion.
All liquid bodies are *diffusive*; for their parts being in motion, have no connexion, but glide and fall off any way.—*T. Burnet, Theory of the Earth.*

Diffusively. *adv.* In a diffusive manner; widely; extensively; every way.
Ἐκκλησία . . . means *diffusively* the whole community of the Christian name.—*Bentley, Phileleutherus Lipsiensis.*

Diffusiveness. *s.* Attribute suggested by Diffusive.

1. Extension; dispersion; power of diffusing; state of being diffused.

The reflection of this quality upon us should be our *diffusiveness*; that we should so be lights, as that we should give light; so have light in ourselves, that we should give it unto others.—*Bishop Hall, Remains*, p. 43.

The most obvious and most general notion of this catholicism consisteth in the *diffusiveness* of the church.—*Bishop Pearson, Exposition of the Creed*, art. ix.

2. Want of conciseness; large compass of expression.

The fault that I find with a modern legend, is its *diffusiveness*: you have sometimes the whole side of a medal overrun with it.—*Addison, Dialogues on the Usefulness of ancient Medals.*

Dig. *v. a.* Pierce with a spade; form, or obtain, by digging.

It is *digged* out of even the highest mountains, and all parts of the earth contingently; as the pyrites.—*Woodward.*

Nor was the ground alone requir'd to bear
Her annual income to the crooked share;
But greedy mortals, rummaging her store,
Digg'd from her entrails first the precious ore.
Dryden, Translation from Ovid.

With *up*.

If I *digg'd up* thy forefathers' graves,
And hung their rotten coffins up in chains,
It would not slake mine ire.
Shakespear, Henry VI. Part III. i. 3.

Dig. *v. n.* Work with a spade; work in making holes, or turning the ground.

They long for death, but it cometh not: and *dig* for it more than for hid treasures.—*Job*, iii. 21.

Then said he unto me, Son of man, *dig* now in the wall; and when I had *digged* in the wall, I beheld a door.—*Ezekiel*, viii. 8.

The Italians have often *dug* into lands described in old authors, as the places where statues or obelisks stood, and seldom failed of success.—*Addison, Travels in Italy.*

Dig. *s.* Thrust; poke: (as, 'a *dig* with a sword;' 'a *dig* in the ribs'). *Colloquial.*

Dígamist. *s.* One who marries a second wife after the death of the first; deuterogamist. See Bigamist, for which it has been sometimes used.

And for the ordinary digamy, the marrying a second time after the decease of the former, that that should be so reproachful or blameable in any, as to render one incapable of holy orders (which they are capable of, which have been guilty of some faults), this is not imaginable neither. . . . Then for the other interpretation, that here the *digamist*, or he that hath had two wives successively, one after another, should be made incapable of holy orders, or be under reproach for so doing, &c.—*Hammond, Works*, vol. viii. p. 597. (Rich.)

Digámma. *s.* [Gr.] Double gamma: (the equivalent in form, place, origin, and perhaps in power, to *vau*, the sixth letter in the alphabet from which the *early* Greek characters were derived; of these the digamma formed one, but was afterwards ejected).

Towering o'er your alphabet, like Saul,
Stands our *digamma*, and o'ertops them all.
Pope, Dunciad.

From this use of the gamma probably came the *digamma*, which from its form, as well as its name, seems to have been composed of two gammas placed one upon another. . . . The *digamma* was certainly pronounced rather as a simple aspirate than as an aspirated consonant. . . It is generally supposed among the learned at present, that the *digamma* was sounded like our W. . . . The Æolic dialect, we know, had more guttural sounds than any other, and more particularly employed the *digamma*, which is thence called Æolic by the later grammarians.—*R. Payne Knight, Analytical Essay on the Greek Alphabet*, p. 12: 1791.

It has been a common assertion, that the old Greek alphabet consisted of only sixteen letters. But Pliny and Plutarch seem, in the first place, to be the sole authority for the statement . . . In defence of Ω, Ψ, X, Φ, we say nothing; but the character Ͱ certainly did exist, not indeed as a long vowel, but as an aspirate. Thus with the *digamma*, the letter H (cheth), and the theta, the old alphabet possessed a complete trio of aspirates: so erroneous is the notion that they should all be excluded.—*Key, Alphabet, Terentian Metres, &c.*

Dígamy. *s.* [Gr. *διγαμία.*] Second marriage; marriage to a second wife after the death of the first; deuterogamy. See Bigamy, for which it has been sometimes used.

They parallel the antick Romans, who (as Tacitus, Marcellin, and Tertullian tell us) so hated *digamy* (both in enjoying two wives at one time, and being twice married) as no holocaust was ever offered, no holy fire lookt unto by such, nor such as issued from such parents.—*Sir T. Herbert, Relation of some Years' Travels into Africa and the Great Asia*, p. 46.

Dr. Champny only proves, that archbishop Cranmer was twice married; which is not denied: but brings nothing to prove that such bigamy or *digamy* rather deprives a bishop of the lawful use of his power of ordaining.—*Bishop Ferne.*

Digástric. *adj.* [Gr. *δίς* = double, *γαστήρ* = belly.] Applied to a muscle of the lower jaw, having, as it were, a double belly.

A certain muscle, called the *digastrick*, rises on the side of the face.—*Paley, Natural Theology*, p. 142.

Dígest. *s.* Thing digested; (with reference to the *systematic* embodiment and exhibition of a mass of detail previously unarranged, more especially to *laws*). For *The Digest*, which is a *proper* rather than a *common* name, see Pandect, and extract from Gibbon.

I had a purpose to make a particular *digest*, or recompilement to the laws of mine own nation.—*Bacon.*

Laws in the *Digest* shew that the Romans applied themselves to trade.—*Arbuthnot, Tables of ancient Coins, Weights, and Measures.*

If they had obeyed his commands in ten years, Justinian would have been satisfied with their diligence, and the rapid composition of the *Digest*; or Pandects, in three years, will deserve praise or censure according to the merit of the execution . . . Πάν (general receiver) is a common title of the Greek miscellanies. The Digesta of the Scævolas, Marcellinus, Celsus, were already familiar to the civilians. But Justinian was wrong when he chose the two appellations as synonymous.—*Gibbon, Decline and Fall of the Roman Empire*, ch. xliv. and note.

Digést. *v. a.* [Lat. *digestus*, pass. part. of *digero*.]

1. Distribute into various classes or repositories; range or dispose methodically.

When that I heard where Richmond did arrive,
I did *digest* my bands in battell-ray.

2. Concoct in the stomach.

Each then has organs to *digest* his food:
One to beget, and one receive the brood. *Prior.*

Used *metaphorically*.

If little faults, proceeding on distemper,
Shall not be wink'd at, how shall we stretch our eye,
When capital crimes, chew'd, swallow'd, and *digested*,
Appear? *Shakespear, Henry V.* ii. 2.

3. In *Chemistry*. Act upon anything by maceration and partial solution in such a manner as to imitate the digestive operation of the stomach.

4. Range methodically in the mind; apply knowledge by meditation to its proper use.

Blessed Lord, who hast caused all holy scriptures to be written for our learning; grant that we may in such wise hear them, read, mark, learn, and inwardly *digest* them, that by patience and comfort of thy holy word we may embrace, and ever hold fast, the blessed hope of everlasting life, which thou hast given us in our Saviour Jesus Christ.—*Book of Common Prayer, Collect for second Sunday in Advent.*

5. Reduce to any plan, scheme, or method.

My words and deeds they daily wrest,
And in their thoughts my fall *digest*.
G. Sandys, Psalms, p. 88.

6. Receive without loathing or repugnance; not to reject.

First, let us go to dinner.—
Nay, let me praise you while I have a stomach.—
No, pray thee, let it serve for table-talk;
Then howsoe'er thou speak'st, 'mong other things
I shall *digest* it.
Shakespear, Merchant of Venice, iii. 5.

7. Receive and enjoy.

Cornwall and Albany,
With my two daughters' dowers, *digest* the third
Shakespear, King Lear, i. 1.

Digéstedly. *adv.* In a digested manner; after the manner of things digested; methodically. *Rare.*

Thus, we doe but talke with our friends by our pen, and express ourselves no whit lesse easily, somewhat more *digestedly*.—*Bishop Hall, Dedication to Epistles.* (Ord MS.)

Not in a slight and perfunctory manner, but studiedly and *digestedly*.—*Life of Mede, Preface to his Works*, p. xxxix.

Digéster. *s.*

1. That which digests; one who digests or concocts his food.

People that are bilious and fat, rather than lean, are great eaters and ill *digesters*.—*Arbuthnot.*

2. That which causes or strengthens the concoctive power.

Rice is of excellent use for all illnesses of the stomach, a great restorer of health, and a great *digester*.—*Sir W. Temple.*

3. Vessel capable of boiling substances at a temperature above 212° Fahr., used in the preparation of soups, and especially in the extraction of gelatine from bones. See extract.

The *digester* is an instrument invented by M. Papin about the beginning of the last century. It is a strong vessel of copper or iron, with a cover adapted to screw on with a piece of felt or paper interposed. A valve with a small aperture is made in the cover, the stopper of which valve may be more or less loaded either by actual weights or by pressure from an apparatus on the principle of the steelyard. The purpose of this vessel is to prevent the loss of heat by evaporation. The solvent power of water when heated in this vessel is greatly increased.—*Ure, Dictionary of Chemistry.*

Digestibílity. *s.* Capability of being digested.

The flesh of adult animals is, at present, considered as preferable, in point of *digestibility*, to that of young ones, because experiments on the gastric juice have shewn the former to be more readily dissolved in this liquid.—*Cheyne, Natural Method of curing the Diseases of the Body.* (Ord MS.)

Digéstible. *adj.* Capable of being, or liable to be, digested.

Those medicines that purge by stool are, at the first, not *digestible* by the stomach, and therefore move immediately downwards to the guts.—*Bacon, Natural and Experimental History.*

Digéstion. *s.*

1. Act of digesting or concocting food in the stomach; power of doing so, in which sense it is nearly equivalent to stomach.

Now good *digestion* wait on appetite,
And health on both. *Shakespear, Macbeth*, iii. 4.

Digestion is a fermentation begun, because there are all the requisites of such a fermentation; heat, air, and motion: but it is not a complete fermentation, because that requires a greater time than the continuance of the aliment in the stomach: vegetable putrefaction resembles very much animal *digestion*.—*Arbuthnot, On the Nature and Choice of Aliments.*

Quantity of food cannot be determined by measures and weights, or any general Lessian rules; but must vary with the vigour or decays of age or of health, and the use or disuse of air or of exercise, with the changes of appetite; and then, by what every man may find or suspect of the present strength or weakness of *digestion*.—*Sir W. Temple.*

Every morsel to a satisfied hunger, is only a new labour to a tired *digestion*.—*South, Sermons.*

The briefest consideration of the many continuous actions constituting the life of the body at large, suffices to show that they are synchronous—that *digestion*, circulation, respiration, excretion, secretion, &c., in all their many subdivisions, are going on at one time, in mutual dependence.—*H. Spencer, Data of Biology.*

2. In *Chemistry*. Preparation by slow soaking and moderate heat.

We conceive, indeed, that a perfect good concoction, or *digestion*, or maturation of some metals, will produce gold.—*Bacon, Natural and Experimental History.*

If, again, leaving those lowest animal forms revealed by the microscope, . . . we pass to those somewhat higher and larger forms which possess a *digestive* cavity, . . . we see in them a correspondence between certain actions in the *digestive* sac,

and the properties of certain surrounding bodies. That a creature of this order may continue to live, it is, on the one hand, necessary, that there be available substances in the environment capable of transformation into its own tissue; and on the other hand it is necessary that the introduction of these substances into the *digestive* sac, shall be followed by the secretion of a solvent fluid capable of reducing them into a fit state for absorption.—*Herbert Spencer.*

2. Capable by heat of softening and subduing.

The earth and sun were in that very state; the one active, piercing, and *digestive* by its heat; the other passive, receptive, and stored with materials for such a production.—*Sir Matthew Hale.*

Dígging. *verbal abs.* Act of one who digs; condition of anything dug.

He shall have the pannage; that is, the fruit of the inheritance of a tree, as herb or grass is of the soil. He shall have the seasonable loppings; so he shall have seasonable *diggings* of an open mine.—*Bacon, Impeachment of Waste.* (Ord MS.)

As our hopes must be confined, so must our designs; let us not project long designs, crafty plots, and *diggings* so deep, that the intrigues of a design shall never be unfolded, till our grand-children have forgotten our virtues or our vices.—*Jeremy Taylor, Rule and Exercises of Holy Dying*, ch. i. s. 2. (Ord MS.)

Within the last few years this word has first taken the special meaning of '*gold* diggings,' and, thence, the *colloquial* or *slang* sense of *apportioned district, premises,* and the like.

Dight. *v. a.* [A.S. *dihtan* = prepare.]

1. Dress; deck; bedeck; embellish; adorn.

1. Measure of length containing three fourths of an inch.

If the inverted tube of mercury be but twenty-five *digits* high, or somewhat more, the quicksilver will not fall, but remain suspended in the tube, because it cannot press the subjacent mercury with so great a force as doth the incumbent cylinder of the air, reaching thence to the top of the atmosphere.—*Boyle, Experiments touching the Spring of the Air.*

2. Any of the numbers expressed by single figures; any number under ten: (so called from counting upon the *fingers*).

Not only the number seven and nine, from considerations abstruse, have been extolled by most, but all or most of other *digits* have been as mystically applauded.—*Sir T. Browne, Vulgar Errours.*

3. Finger, or corresponding part.

The ruminants have the 'cloven foot,' i.e. two hoofed *digits* on each foot, forming a symmetrical pair, as by the cleavage of a single hoof. . . . The third division of the Gyrencephala enjoy a higher degree of the sense of touch through the greater number and mobility of the *digits*, and the smaller extent to which they are covered by horny matter. This substance forms a single plate, in the shape of a claw or nail, which is applied chiefly to one of the surfaces of the extremity of the *digit*, leaving the other, usually the lower, surface possessed of its tactile faculty, whence the name Unguiculata, which, in the present classification, is restricted to this group. . . . The clavicle is rudimental or absent; the innermost *digit* is often stunted or absent. . . . The Carnivora are divided, according to modifications of the limbs, into 'pinnigrades,' 'plantigrades,' and '*digitigrades*.'—*Owen, Anatomy of Vertebrates*, ch. xxv.

Dígitigrade. *adj.* In *Zoology.* Walking upon that part only of the feet which corresponds to the fingers and toes, as opposed to placing upon the ground the parts corresponding with the wrist and heel as well. See Plantigrade and extract.

We may advantageously insert, in this place, some general observations taken from M. Cuvier, who includes all these genera, together with the dogs, in his division named Carnivora. The most prevalent scientific character of the animals in question, according to the Règne Animal, is the constant presence of four large and long canine teeth separated, and between them six incisors in each jaw; the second of which, in the lower row, has always its root more deeply seated than the rest. . . . These animals are more exclusively carnivorous in proportion as their teeth are more or less cutting, and their regimen may be accurately known by comparing the extent of the tuberculous surface of their teeth with the part which is cutting. . . . M. Cuvier then proceeds to divide the whole into two primary groups, from a consideration of their different modes of walking, as exemplified by the structure of the hind feet. These are named the plantigrades and the *digitigrades*. The first stand or walk upon the entire sole of their foot; while the latter, in the same positions, are supported only upon their toes. . . . The bear family is alone plantigrade, while all the rest of the Carnivora are *digitigrade*. The distinction, indeed, is a good one; but, like every other, it may be badly used: the fact being, that the whole of the Felidæ and the types of the Mustelidæ walk upon their toes.—*Swainson, Natural History, Classification of Quadrupeds*, § 162, 163.

Dígitigrade. *s.* Digitigrade animal.

To correspond with the dishonour'd sign,
And all around *dilapidates*; you call—
But none replies—they're inattentive all:

1. In *Logic.* Argument equally conclusive by contrary suppositions.

A *dilemma*, that Morton used, to raise benevolence, some called his fork, and some his crotch.—*Bacon, History of the Reign of Henry VII.*

Hope, whose weak being ruined is
Alike if it succeed, and if it miss;
Whom good or ill does equally confound,
And both the horns of fate's *dilemma* wound.
Cowley.

A young rhetorician applied to an old sophist to be taught the art of pleading, and bargained for a certain reward to be paid, when he should gain a cause. The master sued for his reward, and the scholar endeavoured to elude his claim by a *dilemma*. If I gain my cause, I shall withhold your pay, because the judge's award will be against you; if I lose it, I may withhold it, because I shall not yet have gained a cause. On the contrary, says the master, if you gain your cause, you must pay me, because you are to pay me when you gain a cause; if you lose it, you must pay me, because the judge will award it.—*Johnson.*

Every *dilemma* may be reduced into two or more simple conditional-syllogisms; e.g. 'If Æschines joined, &c. he is inconsistent; he did join, &c. therefore he is inconsistent;' and again, 'If Æschines did not join, &c. he is unpatriotic; he did not, &c. therefore he is unpatriotic.' Now an opponent might deny either of the minor premises in the above syllogisms, but he could not deny both; and therefore he must admit one or the other of the conclusions; for, when a *dilemma* is employed, it is supposed that some one of the antecedents must be true, (or, in the destructive kind, some one of the consequents false), but that we cannot tell which of them is so; and this is the reason why the argument is stated in the form of a *dilemma*. Sometimes it may happen that both antecedents may be true, and that we may be aware of this; and yet there may be an advantage in stating (either separately or conjointly) both arguments, even when each proves the same conclusion, so as not to derive any additional confirmation from the other;—still, I say, it may sometimes be advisable to state both, because, of two propositions equally true, one man may deny or be ignorant of the one, while he admits the other; and another man, vice versâ. From what has been said, it may easily be seen that all *dilemmas* are in fact conditional-syllogisms. — *Whately, Elements of Logic*, ch. iv. § 5.

2. Difficult or doubtful choice; vexatious alternative.

Betwixt this *dilemma* of deaths, the sharp pikes of the soldiers on the one side, and fury of the fire on the other; he preferred the former, not as most honourable, and best complying with a military soul; (not being at leisure, alass, in time of torment, to stand on terms of credit); but as least painful.—*Fuller, Profane State*, p. 479.

All these things combined not only to lift up the Turk, but to keep him aloft at a high pressure. This was not impaired by the succeeding period of *dilettantism*; of light touristic books of travel in the East, then newly opened and newly made safe to Europeans; of kindly Western poets trying to catch a spark of divine fire from the Eastern imagination; even of idealising peculiar institutions like polygamy and the hareem, as we used to call it, under the impression that what was right for Egypt would be right for Turkey too.—*Lady Strangford, Eastern Shores of the Adriatic in* 1863, p. 323.

Dilúvial. *adj.* Diluvian; in *Geology*, connected with, formed by means of, or indicative of, Diluvium.

Since the date of the 'Reliquiæ Diluvianæ' and 'Ossemens Fossiles,' many geologists have been accustomed to refer to a particular era and a violent agency the destruction of many land animals which lived with elephants and mastodons on the surface of Europe: the era was supposed to be the termination of a long post-tertiary period in which these animals lived;—the agency something of the nature of a cataclysm, and very extensive, if not universal. Their opinions were founded principally on the superficiality of situation, confused aggregation, and similarity of organic contents in the gravel, sands, and clays which constituted the deposits, and in many instances appeared to have been moved enormous distances across valleys and seas, or over elevated ranges of ground. These deposits were supposed to have happened on the dried and elevated land, because of the occasional abundance of bones of land animals in them; yet they appeared to be due to the action of large bodies of water: and the notion commonly entertained was, that the sea had been, by some violence of nature, thrown over the land, so as to destroy, at one definite epoch, over large tracts of the globe, whole races of existing mammalia, and greatly modify the physical aspect of our planet. Fresh discoveries showed that the *diluvial* accumulations contained a great variety of deposits accumulated under different circumstances by water moving in different directions, and with various degrees of force; the remains of elephants, mastodons, &c., were found, though rarely, in really tertiary strata, both marine and freshwater: it was further observed, that the *diluvial* masses were totally absent from some districts, and in others appeared to have gone in various directions from a particular group or range of mountains. Influenced by these considerations and the growing importance of the study of modern causes in action, some of the most eminent geologists of England dissented totally from the views of Dr. Buckland, and declared, from the chair of the Geological Society, their conviction that the *diluvial* deposits did not belong to the effects of one general flood, and were not really distinguishable in origin, on the one hand, from the tertiary; and on the other from the modern effects of the sea, the rivers, and the land.—*J. Phillips, Treatise on Geology*, i. 281: 1852.

Dilúvian. *adj.* Relating to, connected with, or formed by, a, or the, deluge. See Diluvium. [Reliquiæ Diluvianæ being the title of a well-known and influential work of Dr. Buckland's, the form in *-an* is commoner than it would have been otherwise; that in *-al* best matching with Alluvial. Both, however, are in use.]

Dilúviate. *v., n.* Run or spread as a flood.

Dilúvium. *s.* [Lat.] In *Geology.* Deluge; matter deposited by a deluge. See extracts under Drift.
The accumulation of these bones, then, appears to have been a long process, going on during a succession of years, whilst all the animals in question were natives of this country. The general dispersion of bones of the same animals through the *diluvian* gravel of high latitudes, over great part of the northern hemisphere, shows that the period in which they inhabited these regions was that immediately preceding the formation of this gravel, and that they perished by the same waters which produced it. M. Cuvier has moreover ascertained that the fossil elephant, rhinoceros, hippopotamus, and hyæna belong to species now unknown; and as there is no evidence that they have at any time, subsequent to the formation of the *diluvium*, existed in these regions, we may conclude that the period at which the bones of these extinct species were introduced into the cave at Kirkdale, was *antediluvian*. Had these species ever re-established themselves in the northern portions of the world since the Deluge, it is probable their remains would have been found, like those of the ox, horse, deer, hog, &c., preserved in the *postdiluvian* accumulations of gravel, sand, silt, mud, and peat, which are referable to causes still in operation, and which, by careful examination of their relations to the adjacent country, can be readily distinguished from those which are of *diluvian* origin.—*Dr. Buckland, Reliquiæ Diluvianæ*, p. 41: 1824.
The term *diluvium* was for a time the popular name of the boulder formation, because it was referred by some to the deluge, whilst others retained the name as expressive of their opinion that a series of *diluvial* waves, raised by hurricanes and storms, or by earthquakes, or by the sudden upheaval of the land from the bed of the sea, had swept over continents, carrying with them vast masses of mud and heavy stones, and forcing these stones over rocky surfaces so as to polish and imprint upon them long furrows and striæ.—*Lyell, Manual of Elementary Geology*, ch. ix.

Dryden.
My gentleman was measuring my walls, and taking the *dimensions* of the room.—*Swift.*
2. Direction in which measurement may be made: (as the three *dimensions* of space).
Time is conceived as a quantity of one *dimension*; it has great analogy with a line, but none at all with a surface or solid. Time may be considered as consisting of a series of instants, which are before and after one another; and they have no other relation than this, of Before and After. Just the same would be the case with a series of points taken along a line; each would be after those on one side of it, and before those on another. Indeed the analogy between time, and space of one *dimension*, is so close, that the same terms are applied to both ideas, and we hardly know to which they originally belong. Times and lines are alike called long and short; we speak of the beginning and end of a line; of a point of time, and of the limits of a portion of duration. But, as has been said, there is nothing in time which corresponds to more than one *dimension* in space, and hence nothing which has any obvious analogy with figure. Time resembles a line indefinitely extended both ways; all partial times are portions of this line; and no mode of conceiving time suggests to us a line making any angle with the original line, or any other combination which might give rise to figures of any kind. The analogy between time and space, which in many circumstances is so clear, here disappears altogether. Spaces of two and of three *dimensions*, planes and solids, have nothing to which we can compare them in the conceptions arising out of time.—*Whewell, History of Scientific Ideas*, b. ii. ch. viii. arts. 4, 5.

I directed a trowze of fine *dimity.*—*Wiseman, Surgery.*

Used *adjectivally.*

My perilous companion commenced a violent wordy attack upon a very respectable round-bodied gentleman who was sitting squeezed into the sternsheets of a skiff, floating most agreeably to himself adown the stream, the gentle south-west breeze giving the sail of his boat a shape very similar to that of his equally well-filled white *dimity* waistcoat. —*Theodore Hook, Gilbert Gurney,* vol. i. ch. iii.

[*Dimity.*—Originally a stuff woven with two threads, from Greek δις, twice, and μιτος, a thread. 'Officinas ubi in fila variis distincta coloribus Serum vellera tenuantur, et sibi invicem multiplici texendi genere coaptantur. Hinc enim videas amita, *dimita* que et trimita minori peritiâ sumptuque perfici," i.e. (says Muratori) 'vulgares telæ sericiæ uno filo seu licio, duobus, aut tribus contextæ.' (Falcandus, Hist. Sicil. in Mur. Diss. 25.) In the same way the German name for velvet, *sammet,* is contracted from *hexamita,* from having been woven of six threads. In like manner German *drillich,* English *drill,* a web of a threefold thread; German *zwillich,* English *twill,* a web of a double thread.—*Wedgwood, Dictionary of English Etymology.*]

Dímly. *adv.* In a dim manner.

1. Not with quick sight; not with clear perception.

Unspeakable! who sitt'st above these heav'ns,
To us invisible, or *dimly* seen,
In these thy lowest works.
Milton, Paradise Lost, v. 156.

2. Not brightly; not luminously.

In the beginning of our pumping the air, the match appeared well lighted; though it had almost filled the receiver with fumes; but by degrees it burnt more and more *dimly.*—*Boyle, Experiments touching the Spring of the Air.*

I saw the angelick guards from earth ascend,
Griev'd they must now no longer man attend;
The beams about their temples *dimly* shone,
One would have thought the crime had been their own. *Dryden.*

Dímming. *verbal abs.* Obscuring.

All of us have cause
To wail the *dimming* of our shining star.
Shakespear, King Richard III. ii. 2.

Dímmish. *adj.* Somewhat dim; somewhat obscure.

'Tis true, but let it not be known,
My eyes are somewhat *dimmish* grown;
For nature, always in the right,
To your decays adapts my sight. *Swift.*

Dímness. *s.* Attribute suggested by Dim.

1. Dullness of sight.

Not with a total blindness, (for then they would not have sought for the door of Lot's house, but rather have groped for the way home,) but such a *dimness* that they could not see any thing distinctly, or in its right place.—*Bishop Patrick, Paraphrase, and Commentaries on the Old Testament, Genesis.*

2. Want of apprehension; stupidity.

Answerable to this *dimness* of their perception, was the whole system and body of their religion.—*Dr. H. More, Decay of Christian Piety.*

Dimórphic. *s.* Having the quality of Dimorphism: (*Dimorphous* is a less correct form, though perhaps commoner).

(For example see second extract under next entry.)

Dimórphism. *s.* [Gr. δις = twice, μορφή = form.]

1. In *Chemistry.* Difference of form combined with identity of composition.

To the new branch of science laid open by the discovery of Mitscherlich the term isomorphism is applied; and those substances which assume the same figure are said to be isomorphous. Of these isomorphous bodies several distinct groups have been described by Mitscherlich. One of the most instructive of these contains the salts of arsenic and phosphoric acid. Thus, the neutral phosphate and biphosphate of soda have exactly the same form as the arseniate and binarseniate of soda; phosphate and biphosphate of ammonia correspond to arseniate and binarseniate of ammonia; and the biphosphate and binarseniate of potass have the same form. . . . The circumstance that the same body occurs in two or more groups is explained by *dimorphism* and trimorphism. . . . Mitscherlich observed that biphosphate of soda is capable of yielding two distinct kinds of crystals, which, though different in form, in composition appear to be identical. The more uncommon of the two forms resembled binarseniate of soda; but the more usual form is quite dissimilar. He subsequently discovered that sulphur is capable of yielding two distinct kinds of crystals; and the same phenomenon now called *dimorphism* has been since observed in carbon, copper, &c. In some cases trimorphism has been observed. Thus, rutile, brookite, and anatase are three distinct forms of titanic acid. — *Turner, Elements of Chemistry,* p. 393.

2. In *Botany.* Difference of form combined with identity of parts and species.

We may, after a certain fashion, rudely group the kinds of *dimorphism* exhibited in the flower under two heads. First, a *dimorphism,* apparently favourable to variation, marked primarily by a partial or complete separation of the sexes, which may be accompanied or not by alteration in the form or arrangement of the parts of the perianth surrounding them; and, second, a *dimorphism,* conservative, and unfavourable to variation, marked primarily by an alteration in the form or arrangement (frequently a reduction) of the outer whorls of the flower, which more or less completely enclose and seal up the sexual organs, which are never wholly separated. Such grouping we may well designate as rude, but there do certainly appear to be two classes or kinds of *dimorphism,* which even in the present state of our knowledge—feeling as it were our uncertain way—it may be well to distinguish. . . . It is to the first group that we may refer the primroses, and with them a very numerous company indeed of trees, and shrubs, and herbs. There are comparatively few natural orders of flowering plants out of the 200 or 300 which are generally recognized, in which we do not find more or less of a *diclinous* condition—a condition which necessarily involves *dimorphism* in respect of the sexual organs. . . . A large proportion of the trees of temperate climates bear only flowers thus *dimorphic.* In the oak, beech, chestnut, and pine, for example, this *dimorphism* is extreme. In the stamen-bearing flowers, we find no rudiment of a pistil—in the pistil-bearing, no rudiment of stamens. But between plants which we may regard as wholly homomorphic, and consequently with flowers completely hermaphrodite, and the extremes just cited, we have an infinity of intermediate conditions. Parting from the hypothetical truly homomorphic hermaphrodite, we find in the case of Mr. Darwin's Primulas one of the first grades of incipient *dimorphism* of which cognizance can be taken. . . . This second group we have not framed to include a *dimorphic* condition of the male flower, or of the female flower, of a unisexual plant. We are not aware, however, that such exist. If there be none, the circumstance is worth noticing.—*Natural History Review,* no. vii. *Review of Darwin on Primula.*

Dímple. *s.* Small cavity or depression in the cheek, chin, or other part.

Love sits in open triumph crown'd;
He in the *dimple* of her chin,

Dímple. *v. n.* Sink in small cavities or little inequalities.

The wild waves master'd him and suck'd him in,
And smiling eddies *dimpled* on the main. *Dryden.*

Thomson, Seasons, Winter.

As the smooth surface of the *dimply* flood,
The silver-slipper'd virgin lightly trod.
J. Warton, Triumph of Isis.

Dímsighted. *adj.* Having dim sight.

Nor may the least suspicion of pride fall upon many women, who while they modestly use help to their complexions, are the more humbled and dejected, under the defects they find of native beauty, or lively colour; the remedying of which, by artificial applications, can be no more temptation to pride, than the use of crutches, or spectacles, to those that are lame and *dim-sighted.*—*Jeremy Taylor, Artificial Handsomeness,* p. 99.

First then for chronology, how *dim-sighted* are the ancients in the computation of time!—*Hakewill, Apology,* p. 246.

We are only deceived in what is not discerned, and to err is but to be blind or *dim-sighted* as to some perceptions.—*Sir T. Browne, Christian Morals,* ii. 3.

Before marriage we cannot be too inquisitive and discerning in the faults of the person beloved, nor after it too *dim-sighted* and superficial.—*Addison, Spectator,* no. 261. (Ord MS.)

Din. *s.* [A.S. *dyn.*] Loud noise; violent and continued sound.

And all the way he roared as he went,
That all the forest with astonishment
Thereof did tremble; and the beasts therein

Perhaps some merchant hath invited him,
And from the mart he's somewhere gone to dinner:
Good sister, let us *dine* and never fret.
Shakespear, Comedy of Errors, ii. 1.

[*Dine.*—Italian, *desinare*; Old French, *disgner, disner, digner*; Provençal, *disnar, dirnar, dinar*. 'Disnavi me ibi.' (Gl. Vatic., quoted by Diez.) Diez suggests a derivation from a Latin *decœnare* (analogous to devorare, depascere), whence in French might have arisen *decener, desner, diner*, as from *decima—desme, dime*, from *buccina—busna*. The Old French had *reciner*, a lunch, from *recœnare*.—*Wedgwood, Dictionary of English Etymology*.]

Dine with Duke Humphrey. Go without a dinner. (One explanation of this phrase rests upon the character for hospitality of Humphrey, Duke of Gloucester, and uncle to Henry VI. He kept a free table, so that those who dined at it dined otherwise than at their own expense. After his death, however, the class of men that thus fed themselves were said to dine with Duke Humphrey when they dined neither at their own expense nor anyone else's. Another refers it to the practice of passing the time usually devoted to dining in sauntering about St. Paul's, where Duke Humphrey was erroneously believed to have been buried. It is commonest in the Elizabethan literature, the date of which is compatible with some confusion as to its origin.)

(For example see extract under Dinnerless.)

Dine. *v. a.* Give a dinner to; feed.

Boil this restoring root in generous wine,
And set beside the door the sickly stock to *dine*.
Dryden, Virgil's Georgics.

Dinétical. *adj.* [Gr. δινητικός.] Whirling round; vertiginous.

Even the Postboy and the Postman, which seem to have been the best conducted and the most prosperous, were wretchedly printed on scraps of *dingy* paper, such as would not now be thought good enough for street ballads.—*Macaulay, History of England*, ch. xxi.

Dinórnis. *s.* [Gr. δεινος = dreadful, terrible, formidable, ὄρνις = bird.] In *Paleontology.* Fossil bird so named. See extract.

New Zealand was found to contain no indigenous land quadrupeds, . . . but a wingless bird abounded there. In the fossils of the post-pliocene and pleistocene period, in this same island, there is the like absence of kangaroos, opossums, wombats, and the rest; but in their place a prodigious number of well-preserved specimens of gigantic birds of the struthious order called by Owen *Dinornis* and Palæopteryx. . . . These genera comprehended many species; some of which were 4, others 7, others 9, and others 11 feet in height.—*Lyell, Manual of Elementary Geology*, ch. xiii.

Dínothere, or **Dinothérium.** *s.* [Gr. δεινος, and θήριον, θήρ = beast.] Large pachydermatous animal so called, akin to the elephants and tapirs. See extract.

The length of the *Dinotherium* is calculated to have been at least as much as eighteen feet, and its proportions were probably very much the same as those of the great American tapir. . . . It is not unlikely, from the structure of some other extinct pachyderms, that the very anomalous position of the tusks has reference to other peculiarities of the *Dinothere*.—*Ansted, Geology*, ii. 85.

Dint. *s.* [A.S. *dynt.*]

1. Blow; stroke.

Much daunted with that *dint*, her sense was daz'd;

I have myself known a man, from the lowest conditions of life, without friends or education, not knowing so much as to write or read, bred to no trade or calling, by pure *dint* of day-labour, frugality, and foresight, to have grown wealthy.—*Bishop Berkeley, Word to the Wise.*

Dint. *v. a.* Mark with a cavity by a blow or violent impression; dent.

Leave, leave, fair bride, your solitary bed,
No more shall you return to it alone;
It nurseth sadness; and your body's print,
Like to a grave, the yielding down doth *dint*.
Donne, Poems, p. 114.

As a *diocesan* you are like to outdo yourself in all other capacities, and exemplify every word of this discourse.—*South.*

Diócesan. *adj.* Pertaining to a diocese.

The Society for promoting Christian Knowledge looks with peculiar hope and satisfaction to the permanent zealous aid and co-operation of the *diocesan* and district committees.—*Account of the Society for promoting Christian Knowledge.*

Diócese. *s.* (frequently, but improperly, written *diocess.*) [Lat. *diœcesis*; Gr. διοίκησις.]

1. Circuit of a bishop's jurisdiction.

None ought to be admitted by any bishop but such as have dwelt and remained in his *diocess* a convenient time.—*Archbishop Whitgift.*

He should regard the bishop of Rome as the islanders of Jersey and Guernsey do him of Coustance in Normandy; that is, nothing at all; since by that French bishop's refusal to swear unto our king, those isles were annexed to the *diocess* of Winchester.—*Sir W. Raleigh, Essays.*

St. Paul looks upon Titus as advanced to the dignity of a prince, ruler of the church, and intrusted with a large *diocess* containing many particular cities, under the immediate government of their respective elders, and those deriving authority from his ordination.—*South.*

Diocese . . . signifies the circuit of every bishop's jurisdiction. For this realm hath two sorts of division; one into shires or counties in respect to the temporal state, and another into *dioceses* in regard to the ecclesiastical state.—*Burn, Ecclesiastical Law.* (Phillimore.)

2. District or division of a country, generally speaking.

Wild boars are no rarity in this *diocess*, which the Moors hunt and kill in a manly pastime.—*L. Addison, Description of West Barbary*, ch. ii.: Oxf. 1671.

Diocesener. *s.* Diocesan.

They say this unity in the bishop or the rector doth not create any privity between the parishioners or *diocesener*s more than if there were several bishops, or several parsons.—*Bacon, Works*, 337. (Ord MS.)

Dióptric. *adj.* [Gr. διοπτρικός.—see Optics.] Affording a medium for the sight; assisting the sight in the view of distant objects.

View the asperities of the moon through a *dioptrick* glass, and venture at the proportion of her hills by their shadows.—*Dr. H. More, Antidote against Atheism.*

For its special application in connection with *lighthouses* see extract.

The early lighthouses appear to have been illuminated by coal or wood fires contained in 'chauffers.' The Isle of Man light was of this kind until 1816. The first decided improvement was made by Argand in 1784, who invented a lamp with a circular wick, the flame being supplied by an external and internal current of air. To make these lamps more effective for lighthouse illumination, and to prevent the ray of light escaping on all sides, a reflector was added in 1780 by M. Lenoir; this threw the light forward in parallel rays towards such points of the horizon as would be useful to the mariner. Good reflectors increase the luminous effect of a lamp about 400 times: this is the 'catoptric' system of lighting. When reflectors are used there is a certain quantity of light lost, and the *dioptric* or refracting system, invented by the late M. Auguste Fresnell in 1822, is designed to obviate this defect to some extent; the 'catadioptric' system is a still further improvement, and acts both by refraction and reflexion.—*Ure, Dictionary of Arts, Manufactures, and Mines.* (Hunt.)

Dióptrical. *adj.* Same as Dioptric.

Being excellently well furnished with *dioptrical* glasses, he had not been able to see the sun spotted.—*Boyle.*

Dióptrics. *s.* Part of Optics treating of the different refractions of the light passing through different mediums; as the air, water, glasses, &c.

He has added much to the theory of *dioptricks*: much to the manufacture itself of grinding good glasses.—*Bishop Sprat, History of the Royal Society*, p. 314.

Diorâma. *s.* [Gr. = object seen through; view through anything.] Kind of painting so called. See second extract.

There is no visible appearance which is inseparably connected with solidity. If a picture of a cube be rightly drawn in perspective and skilfully shaded, the impression upon the sense is the same as if it were a real cube. The picture may be mistaken for a solid object. But it is clear that, in this case, the solidity is given to the object by an act of mental judgment. All that is seen is outline and shade, figures and colours on a flat board. The solid angles and edges, the relation of the faces of the figure by which they form a cube, are matters of inference. This, which is evident in the case of the pictured cube, is true in all vision whatever. We see a scene before us on which are various figures and colours,

but the eye cannot see more. It sees length and breadth, but no third *dimension*. In order to know that there are solids, we must infer as well as see. And this we do readily and constantly; so familiarly, indeed, that we do not perceive the operation. Yet we may detect this latent process in many ways; for instance, by attending to cases in which the habit of drawing such inferences misleads us. Most persons have experienced this delusion in looking at a scene in a theatre, and especially that kind of scene which is called a *diorama*, when the interior of a building is represented. In these cases, the perspective representations of the various members of the architecture and decoration impress us almost irresistibly with the conviction that we have before us a space of great extent and complex form, instead of a flat painted canvass. Here, at least, the space is our own creation; but yet here, it is manifestly created by the same act of thought as if we were really in the palace or the cathedral of which the halls and aisles thus seem to inclose us. And the act by which we thus create space of three *dimensions* out of visible extent of length and breadth, is constantly and imperceptibly going on. We are perpetually interpreting in this manner the language of the visible world. From the appearances of things which we directly see, we are constantly inferring that which we cannot directly see, —their distance from us, and the position of their parts.—*Whewell, History of Scientific Ideas*, ch. vi.

The peculiar and very high degree of optical illusion produced by the *diorama* depends upon two principles; the mode of exhibiting the painting, and the manner of preparing it. With respect to the first of these, the spectator and the picture are placed in separate rooms, and the picture viewed through an aperture, the sides of which are continued towards the picture, so as to prevent any object in the picture room from being seen excepting the painting itself. . . . The picture room is illuminated from the roof, which is glazed with ground glass; and the picture so placed that the light falls on it at a proper angle to be reflected towards the aperture. The roof, which is invisible to the spectator, is provided with an apparatus of folds or shutters, by which the intensity of the illumination may be increased or diminished at pleasure. . . . The second principle consists in painting certain parts of the picture in transparency, and admitting a stream of light upon it from behind, which, passing through the picture, produces a brilliancy far surpassing what could be obtained by illuminating the picture in the ordinary way, and renders the relief of the objects represented much stronger and more deceptive.—*Brande, Dictionary of Science, Literature, and Art, Diorama.*

Diorism. *s.* [Gr. διόρισμα.] Distinction, or definition, which in few words explains what is spoken of. *Rare.*

To eat things sacrificed to idols, is one mode of idolatry; but, by a prophetical *diorism*, it signifies idolatry in general.—*Dr. H. More, Exposition of the Seven Churches*, p. 72.

Dioristically. *adv.* In a distinguishing manner. *Rare.*

Ye are not so pure and clean as ye ought to be, and free from the lusts of the flesh; which vice is here noted by Nicolaitism *dioristically*, as idolatry in general before by eating things sacrificed to idols. —*Dr. H. More, Exposition of the Seven Churches*, p. 72.

Dip. *v. a.*

1. Immerge; put into any liquor.

The person to be baptized may be *dipped* in water; and such an immersion or dipping ought to be made thrice, according to the canon.—*Ayliffe, Parergon Juris Canonici.*

Now on Fancy's easy wing convey'd,
The king descended to th' Elysian shade;
There in a dusky vale, where Lethe rolls,
Old Bavius sits to *dip* poetic souls. *Pope, Dunciad.*

So fishes rising from the main,
Can soar with moisten'd wings on high;
The moisture dry'd, they sink again,
And *dip* their wings again to fly. *Swift.*

2. Moisten; wet.

And though not mortal, yet a cold shudd'ring dew
Dips me all o'er, as when the wrath of Jove
Speaks thunder. *Milton, Comus*, 802.

3. Be engaged in any affair.

When men are once *dipt*, what with the encouragements of sense, custom, facility, and shame of departing from what they have given themselves up to, they go on till they are stifled.—*Sir R. L'Estrange.*

In Richard's time, I doubt, he was a little *dipt* in the rebellion of the commons.—*Dryden, Fables.*

4. Engage as a pledge: (generally used for the *first* mortgage).

Be careful still of the main chance, my son,
Put out the principal in trusty hands,
Live on the use, and never *dip* thy lands.
Dryden, Persius's Satires.

Dip. *v. n.*

1. Sink; immerge.

We have snakes in our cups and in our dishes, and whoever *dips* too deep will find death in the pot.—*Sir R. L'Estrange.*

2. Enter; pierce.

The vulture *dipping* in Prometheus' side,
His bloody beak with his torn liver dy'd. *Granville.*

Dip into. Enter slightly into anything.

3. Take that which comes first; choose by chance.

With what ill thoughts of Jove art thou possess'd?
Would'st thou prefer him to some man? Suppose
I *dipp'd* among the worst, and Staius chose?
Dryden, Persius's Satires.

4. In *Geology.* See Dip, *s.*

Dip. *s.*

1. In *Magnetism.* Downward inclination of the magnetic needle.

(For example see extract under Dipping-Needle.)

2. In *Geology.* See second extract.

Great columns of stone hang down the face of some of these rocks almost perpendicularly, or with a very slight *dip*.—*Pennant.*

If a stratum or bed of rock, instead of being quite level, be inclined to one side, it is said to *dip*; the point of the compass to which it is inclined is said to be the point of *dip*, and the degree of deviation from a level or horizontal line is called the amount of *dip*, or the angle of *dip*. . . . The strike or line of bearing is the prolongation or extension in a direction at right angles to the *dip*.—*Lyell, Manual of Elementary Geology*, ch. v.

3. Candle made by dipping the wick in tallow: (opposed to Mould).

It is a solitary purser's *dip*, as they are termed at sea, emitting but feeble rays, and Vanslyperken's eyes are directed to the door of the cabin to see who carries it.—*Marryat, Snarleyyow*, vol. i. ch. xix.

Dipchick. *s.* Same as Dabchick.

Dipchick is so named of his diving and littleness. —*Carew.*

Diphthéria. *s.* [Gr. διφθέρα = leathern skin or garment; whence membrane like leather.] Disease so called, characterized by the formation of a false membrane on the fauces and trachea.

Reference was made in the last lecture to a second form of disease, resembling croup in some respects, though differing in others, alike but not the same, and calling therefore for a separate notice. This other disease, angina maligna, diphtheritis, or more correctly *diphtheria*, is no new malady. . . . Starr's unpretending account of the disease at Liskeard, a century ago, details all the most characteristic features of *diphtheria*: the false membrane on the fauces, its extension to the air-passages, its appearance on blistered surfaces and upon the skin behind the ears, leave scarcely a symptom wanting to prove the identity of the two affections.—*West, On the Diseases of Infancy and Childhood*, lect. xxv.

Diphtherític. *adj.* Connected with, relating to, or formed by, diphtheria.

The appearances produced by the extension of the *diphtheritic* deposit to the air-passages are precisely the same as those observed in cynanche trachealis. —*West, On the Diseases of Infancy and Childhood*, lect. xxv.

Díphthong. *s.* [Gr. δίφθογγος.] Coalition of two vowels to form one sound: (as *ai*- in *aile*).

We see how many disputes the simple and ambiguous nature of vowels created among grammarians, and how it has begot the mistake concerning *diphthongs*: all that are properly so are syllables, and not *diphthongs*, as is intended to be signified by that word.—*Holder, Elements of Speech.*

Make a *diphthong* of the second eta and iota, instead of their being two syllables, and the objection is gone.—*Pope.*

Diphthóngal. *adj.* Having the nature or character of a diphthong.

Two vowels coalescing in one syllable, so as to form a double vowel sound, make what is called a diphthong, as ou in round, ui in juice, and sometimes a *diphthongal* sound is expressed by a single vowel letter, as u in muse, i in mind, and sometimes by three vowel letters, as eau in beauty, ieu in lieu.— —*Beattie, Elements of Moral Science*, pt. i. § 38. (Ord MS.)

Diplóma. *s.* [Gr. δίπλωμα; Lat. *diploma.*] Letter or writing conferring some privilege: (so called because formerly written on waxed tables, *folding together*).

My present design is more relating to the nature of letters, than to the *diplomata* or charters themselves.—*Wanley, Letter to Dr. Smith.*

Not only may the State, by its patronage, assist in promoting the diffusion of sound knowledge, both in the upper and lower strata of society; but it may also authenticate certain persons, as possessing a competent amount of skill for the practice of a profession or calling. Thus it may, by proper examinations, ascertain the qualifications of candidates to practise medicine or law; and upon those who come up to the prescribed mark of fitness, it may confer *diplomas*, or other authorities to practise. . . . The granting of *diplomas* by universities, or other learned bodies, proceeds on the supposition, that the public require some assistance to their judgment in the choice of professional services, and that such an official scrutiny into the qualifications of practitioners is a useful security against the imposture or incompetency of mere pretenders to skill. . . . Such [medical] degrees or *diplomas*, however, do not of themselves import more than an authentication by duly appointed public officers. . . Hence, they are not necessarily licences to practise, and do not imply any exclusive right. In this country, for example, any quack doctor may legally practise medicine: the *diplomas* of the public bodies which preside over the medical profession merely serve as guides to the public in the choice of their medical advisers. M. Dunoyer, in his work 'On the Liberty of Labour,' maintains, not only that medical *diplomas* ought to confer no exclusive right of practising medicine, but that they serve merely as skreens for incapacity, and substitutes for real knowledge, and ought therefore to be discontinued altogether.—*Sir G. C. Lewis, On the Influence of Authority in Matters of Opinion*, ch. ix. § 17.

(See also extract under Diplomatics.)

Diplómacy. *s.* Art of conducting relations with foreign states; business of an individual diplomatist; diplomatic body: (often used for *tact* like that shown or expected among diplomatists).

The foreign ministers were ordered to attend at this investiture of the directory; for so they call the managers of their burlesque government. The *diplomacy*, who were a sort of envoys, were quite awe-struck with 'the pride, pomp, and circumstance' of this majestic senate!—*Burke, Thoughts on a Regicide Peace.*

Díplomat. *s.* Diplomatist.

The treaty now under consideration contains, we are informed, between twenty and thirty articles. . . . But, unless the *diplomats* of Europe are strangely misinformed, general political differences have not come, and are not likely to come, just at present under discussion.—*Saturday Review*, June 3, 1865.

Diplómate. *v. a.* Invest with any rank, privilege, license, or authority conferred or indicated by a diploma. *Obsolete.*

By virtue of the Chancellor's letters he was *diplomated* doctor of divinity in 1660.—*A. Wood, Athenæ Oxonienses.*

Diplomátic. *adj.*

1. Relating to the art of deciphering old written characters and abbreviations.

One of the principal objects of the following work is the illustration of what for near two centuries has been called the *diplomatick* science, the knowledge of which will enable us to form a proper judgement of the age and authenticity of manuscripts, charters, records, and other monuments of antiquity.—*Astle, Origin and Progress of Writing*, introd.

(See also extract under Diplomatics.)

2. Respecting envoys and ambassadors, or the privileges belonging to them, and sometimes to others, in a public capacity.

Diplomátics. *s.* [see Chromatics.] Art of determining the date and place of documents by internal evidence, or the examination of the documents themselves.

Documents or *diplomas* are writings which stipulate a right, confer an estate, a fief, a privilege, a title, or a dignity, or record one particular important transaction in a solemn form. The word *diploma* occurs but rarely in the documents themselves. They are in general styled Præceptum, Auctoritas, &c. . . . Latin was the *diplomatic* language in both the Eastern and Western Empire until the year of our era 602, after which the Greek language alone was used in the documents of the Eastern and the Latin in those of the Western Empire. . . . The science of *diplomatics* owes its origin to a Jesuit of Antwerp named Papebroch.—*Rees, Encyclopædia.*

Diplómatist. *s.* One employed, or fit to be employed, in diplomacy; one who, in the management of any matter, shows tact or skill such as belongs to diplomacy.

He was justly esteemed one of the first *diplo-*

matists in Europe: but the talents and accomplishments of a *diplomatist* are widely different from those which qualify a politician to lead the House of Commons in agitated times.—*Macaulay, History of England*, ch. ii.

Dípper. *s.*

1. One who dips.

The chief enemy was a *dipper*, Pharaoh; the first and last of kings that were so, as the Red Sea can witness.—*Whitlock, Observations on the present Manners of the English*: 1654.

In which number, I must be forced to reckon that doctor, who in a late equivocating treatise plausibly set afloat against the *dippers*, diving the while himself with a more deep prelatical malignance against the present state and church-government, mentions with ignominy 'the Tractate of Divorce.'—*Milton, Tetrachordon.*

Our townsmen, since of floods they must turn skippers,
Will change religion too, and so turn *dippers*.
Cleaveland, Poems, &c. p. 18.

2. Bird so called; water ousel (Cinclus aquaticus).

The *dipper* frequents clear rocky mountain streams, and although allied to the thrush or the blackbird in its internal organization and many of its actions on land, it has also the habits and powers of the moorhen.—*Yarrell, British Birds.*

Dípping. *verbal abs.* (used also *adjectivally*, or as the *first element* in a *compound*.) Act of one who dips; process by which any thing is dipped: (with a special application to *work* in *metal*).

Ornamental works in brass are usually brightened by a process called *dipping*. After the work has been properly fitted together, and the grease removed, either by the action of heat or by boiling in a pearl-ash lye, it is pickled in a bath of dilute aqua fortis. It is then scoured bright with sand and water, and, being well washed, is plunged into the *dipping* bath, which consists of pure nitrous acid, ... commonly known as *dipping* aqua fortis, for an instant only, and is then well washed with cold and hot water to remove every trace of acid from the surface, after which it is put into dry beech or box wood sawdust, &c., well rubbed until it is quite dry, and then burnished and lacquered with as little delay as possible.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

Dipping-needle. *s.* Needle showing the magnetic Dip.

But the earth has also a further influence upon an artificial magnet, which is only rendered evident when it is so suspended as to move freely in every direction. Under these circumstances, and in our latitudes, the north pole of the needle is attracted downwards, as well as to the north, and assumes a position almost vertical.... This inclination to the horizontal plane is called the *dip* of the magnetic needle.... When a bar of soft iron is held nearly vertical, or in the direction of the *dipping-needle*, its ends are no longer indifferently attractive of a poised magnet; but (so long only as it continues in or near that position) it is polar, the lower end of the bar being a north pole, and the upper end a south pole, and it affects the magnetic needle accordingly.—*Brande, Chemistry*, p. 246.

Dípsas. *s.* [Gr. δψάς; from δίψα = thirst.] Serpent whose bite produces the sensation of unquenchable thirst.

Scorpion, and asp, and amphisbæna dire,
Cerastes horn'd, hydrus, and ellops drear,
And *dipsas*. *Milton, Paradise Lost*, x. 524.

Díptera. *s.* [Gr.; from δίς = twice, πτέρον = wing.] Class of insects so called, represented by the housefly, gnat, gaffer longlegs, &c. (*Dipterous* and other allied words are congeners.)

The wings of insects are essentially flattened vesicles, sustained by slender but firm hollow tubes called 'nervures,' along which branches of the tracheæ, and channels of the circulation, are continued. The wings never exceed two pairs.... Sometimes one or other of these pairs is wanting. The wings present many varieties in their shape, their consistence, and their teguments. When they subserve flight, they are thin and transparent; or, if opake, are rendered so by an imbricated clothing of most delicate scales, which, when detached, resemble the pollen of flowers.... When the hinder pair of wings is wanting, it is replaced by a pair of rudimental appendages called balancers: other modifications of, or appendages to, the wings have been called 'alulæ' and 'patagia.' The orders of insects,... as before remarked, [are] founded upon the modifications of the wings.... The order *Diptera* is characterised by the development of the anterior pair of wings into organs of flight, and the retention of the hinder pair in the condition of minute clavate appendages, usually called the 'balancers.' The prothorax and metathorax are rudimental whilst the mesothorax is disproportionately large to form the required space for the powerful muscles, which execute, through the two anterior wings, the function of flight.—*Owen, Lectures on Comparative Anatomy*, lect. xvi.

Díptych. *s.* [Lat. *diptycha*; Gr. δίπτυχος = twice folded.] Writing tablets consisting of two tablets hinged at the back; register of bishops, saints, and martyrs.

They had a lower degree of remembrance for bishops, and confessors, and all other eminent persons departed this life; whom they not only praised in orations at their funerals, but writ their names in their *diptychs* or two-leaved records: which contained, in one page, all the names of the living; in the other, the dead that were of note in the church. —*Bishop Lloyd, Sermons*, p. 19.

The commemoration of saints was made out of the *diptychs* of the church, as appears by multitudes of places in St. Austin.—*Bishop Stillingfleet.*

[This word is frequent among the poets, but has been censured as not analogical; all other words compounded with *full* consisting of a substantive and *full*: as, dreadful, or full of dread; joyful, or full of joy. So far Dr. Johnson. I must add, however, that good writers, besides the poets, use this word; as the fine sentence of Bishop Richardson, and the remarks of Dr. Addison and Bishop Bull, now added to the examples, shew. Dr. Addison's use of the word carries the etymology to the Latin *diræ*, curses, and *full*; i.e. full of curses, which removes the want of analogy which Dr. Johnson states. But *all other words* compounded with full do not consist of a substantive and full; witness *resentful*, admitted by Dr. Johnson himself into his dictionary.—*Todd.*]

The principle of not importing a word when it is not required, by no means implies that, when a word of foreign growth is excellent of its kind and cannot be produced on our own soil, we should refuse to receive it. The word 'parent,' for instance, is one for which we could not easily find or coin an equivalent in the Anglo-Saxon portion of English. We have done well to take it,—it is now a part of the language,—and being so, we should do well to construct from it, whenever it is found advisable, the word 'parenthood,' for which there is no equivalent in the original Latin. By the judicious adoption of a single foreign prefix where our own is not well adapted for compounds, we might often introduce, as we have already done in some instances, not a single new word, but a hundred. Such a compound as 'again-build' would be clumsy,—by taking the Latin 're' we form 'rebuild' with very good effect. So the 'ex' of 'ex-king' and 'ex-queen,' the 'vice' of 'vice-president' and 'vice-chairman,' have done the English language excellent service. Again, there are some foreign words that must be had from other languages at any price,—words that are struck out in some phase of language by a happy accident, and that the world may be glad to get just as they are. The Portuguese are without a word corresponding to the English '*disappoint*,' and one of their poets has expressed very forcibly his sense of their want of it by putting it in the mouth of the devil in his dialogue with a Portuguese friar:—
'Fiquei *desapontado*,—como dizem
Os Ingleses;—não ha na vossa lingua
Com que o dizer—e venha ou não do diabo
Tomem-na que hão mister d'essa palavra.'
'So I was *disappointed*,—as they say
In English,—'tis a word you never had;
But reach you through the devil so it may,
Don't let it go—you want it very bad.'
(Almeida Garrett's poem of Dona Branca, c. vi. st. 21.)

Disbeliéf. *s.* Refusal of credit; denial of belief.

Our belief or *disbelief* of a thing does not alter the nature of the thing.—*Archbishop Tillotson.*

The result of the examination of evidence is not always belief, nor even suspension of judgment; it is sometimes *disbelief*. The philosophy, therefore, of induction and experimental inquiry is incomplete, unless the grounds not only of belief, but of *disbelief*, are treated of. . . . By *disbelief* is not here to be understood the mere absence of belief. The ground for abstaining from belief is simply the absence or insufficiency of proof; and in considering what is sufficient evidence to support any given conclusion, we have already, by implication, considered what evidence is not sufficient for the same purpose. By *disbelief* is here meant, not the state of mind in which we form no opinion concerning a subject, but that in which we are fully persuaded that some opinion is not true; insomuch that if evidence, even of great apparent strength, (whether grounded on the testimony of others or on our own supposed perceptions,) were produced in favour of the opinion, we should believe that the witnesses spoke falsely, or that they or ourselves if we were the direct percipients, were mistaken. That there are such cases, no one is likely to dispute. Assertions for which there is abundant positive evidence are often *disbelieved*, on account of what is called their improbability, or impossibility. And the question for consideration is, what, in the present case, these words mean, and how far and in what circumstances the properties which they express are sufficient grounds for *disbelief*. . . . It is a case for comparison of probabilities. If the approximate generalizations leading to the affirmative are, when added together, less strong, or in other words, farther from being universal, than the approximate generalizations which support the negative side of the question, the proposition is said to be improbable, and is to be disbelieved, provisionally. If, however, an alleged fact be in contradiction, not to any number of approximate generalizations, but to a completed generalization grounded on a rigorous induction, it is said to be impossible, and is to be *disbelieved* totally.—*J. S. Mill, System of Logic*, ch. xxv.

Discontinuance [is] an interruption or breaking off; as *discontinuance* of possession, or *discontinuance* of process. The effect of *discontinuance* of possession is, that a man may not enter upon his own land or tenement alienated, whatsoever his right be unto it, or by his own authority; but must seek to recover possession by law. M. Dunoyer, in his work 'On the Liberty of Labour,' maintains, not only that medical diplomas ought to confer no exclusive right of practising medicine, but that they serve merely as skreens for incapacity, and substitutes for real knowledge, and ought therefore to be *discontinued* altogether.—*Sir G. C. Lewis, On the Influence of Authority in Matters of Opinion.*

All *discord*, harmony not understood. *Pope*

3. In *Music.* Combination of discordant sounds.

It is sound alone that doth immediately and incorporeally affect most; this is most manifest in musick, and concords and *discords* in musick: for all sounds, whether they be sharp or flat, if they be sweet, have a roundness and equality; and if they be harsh, are unequal, for a *discord* itself is but a harshness of divers sounds meeting.—*Bacon.*

It is the lark that sings so out of tune,
Straining harsh *discords* and unpleasing sharps.
Shakespear, Romeo and Juliet, iii. 5.

Discord. *v. n.* Disagree; not suit with.

Sounds do disturb and alter the one the other; sometimes the one drowning the other, and making it not heard; sometimes the one jarring and *discording* with the other, and making a confusion.—*Bacon.*

Discount [is] an allowance paid on account of the immediate advance of a sum of money not due till some future period. It is usually said to be of two kinds; viz. *discount* of bills, and *discount* of goods: but they are essentially the same. When a bill of exchange is presented at a banker's for *discount*, it is the practice to calculate the simple interest for the time the bill has to run, including the days of grace, which interest is called the *discount*, and this being deducted from the amount of the bill the balance is paid over to the presenter of the bill.—*McCulloch, Dictionary of Commerce.*

It would be necessary to say something of the state to which the war hath reduced us; such a *discovery* ought to be made as late as possible.—*Swift.*

With respect to the meaning of the terms in question, '*discovery*,' and 'new truth;' it matters not whether we confine ourselves to the narrowest sense, or admit the widest, provided we do but distinguish. There certainly are two kinds of 'new truth' and of '*discovery*,' if we take those words in the widest sense in which they are ever used. First, such truths as were, before they were discovered, absolutely unknown, being not implied by anything we previously knew, though we might perhaps suspect them as probable. Such are all matters of fact strictly so called, when first made known to one who had not any such previous knowledge, as would enable him to ascertain them a priori; i.e. by reasoning.... The other class of *discoveries* is of a very different nature. That which may be elicited by reasoning, and consequently is implied in that which we already know, we assent to on that ground, and not from observation or testimony. To take a geometrical truth upon trust, or to attempt to ascertain it by observation, would betray a total ignorance of the nature of the science.... It is of the utmost importance to distinguish these two kinds of *discovery* of truth. In relation to the former, as I have said, the word 'information' is most strictly applied; the communication of the latter is more properly called 'instruction.'... It is a question comparatively unimportant, whether the term '*discovery*' shall or shall not be extended to the eliciting of those truths, which, being implied in our previous knowledge, may be established by mere strict reasoning.... To use one more illustration. Reasoning has been aptly compared to the piling together blocks of stone; on each of which, as on a pedestal, a man can raise himself a small, and but a small height above the plain; but which, when skilfully built up, will form a flight of steps, which will raise him to a great elevation. Now (to pursue this analogy) when the materials are all ready to the builder's hand, the blocks ready dug and brought, his work resembles one of the two kinds of *discovery* just mentioned, viz. that to which we have assigned the name of instruction: but if his materials are to be entirely, or in part, provided by himself,—if he himself is forced to dig fresh blocks from the quarry,—this corresponds to the other kind of *discovery*.—*Whately, Elements of Logic*, b. iv. ch. ii. § 1.

While the freedom of the investigation depends upon the absence of external force, its right issue depends upon underanged machinery within; and it is the most miserable of all our human delusions, that we actually require *discrepancy* of opinion—require and demand error, falsehood, blindness, and plume ourselves upon such *discrepancy* as attesting a freedom which is only valuable when used for unity in the truth, and which is an evil when wrongly, as it is a good when rightly employed.—*Gladstone, The State in its Relations with the Church.*

the origin of the word before us, in some of its senses, might be equivocal. That this is not an imaginary difficulty may be seen under Concrete. *Concrete* is the ordinary opposite to *abstract*; it is probable, however, that it has a second sense, the opposite to *discrete*, of which the origin is the *cretus* from *cerno*. *Discreet*, with the same origin, is conveniently differentiated from *discrete* by its spelling.]

Elyot, The Governour*, fol. 78.

It would be necessary to say something of the state to which the war hath reduced us; such a *discovery* ought to be made as late as possible.—*Swift.*

With respect to the meaning of the terms in question, '*discovery*,' and 'new truth;' it matters not whether we confine ourselves to the narrowest sense, or admit the widest, provided we do but distinguish. There certainly are two kinds of 'new truth' and of '*discovery*,' if we take those words in the widest sense *in* which they are ever used. First, such truths as were, before they were discovered, absolutely unknown, being not implied by anything we previously knew, though we might perhaps suspect them as probable. Such are all matters of fact strictly so called, when first made known to one who had not any such previous knowledge, as would enable him to ascertain them à priori; i.e. by reasoning.... The other class of *discoveries* is of a very different nature. That which may be elicited by reasoning, and consequently is implied in that which we already know, we assent to on that ground, and not from observation or testimony. To take a geometrical truth upon trust, or to attempt to ascertain it by observation, would betray a total ignorance of the nature of the science.... It is of the utmost importance to distinguish these two kinds of *discovery* of truth. In relation to the former, as I have said, the word 'information' is most strictly applied; the communication of the latter is more properly called 'instruction.'... It is a question comparatively unimportant, whether the term '*discovery*' shall or shall not be extended to the eliciting of those truths, which, being implied in our previous knowledge, may be established by mere strict reasoning.... To use one more illustration. Reasoning has been aptly compared to the piling together blocks of stone; on each of which, as on a pedestal, a man can raise himself a small, and but a small height above the plain; but which, when skilfully built up, will form a flight of steps, which will raise him to a great elevation. Now (to pursue this analogy) when the materials are all ready to the builder's hand, the blocks ready dug and brought, his work resembles one of the two kinds of *discovery* just mentioned, viz. that to which we have assigned the name of instruction: but if his materials are to be entirely, or in part, provided by himself,—if he himself is forced to dig fresh blocks from the quarry,—this corresponds to the other kind of *discovery*.—*Whately, Elements of Logic*, b. iv. ch. ii. § 1.

Disincorporátion. *s.* Deprivation of the rights and privileges of a corporate body.

The bishop of Chichester, in opening the disputation of Henry the Eighth with Lambert, in Westminster Hall, ranked the king's *disincorporation* of the monks with his rejection of the see of Rome, his abolition of idolatrous adoration, and the introduction of the English Bible, as a matter of an external nature, and in no respect interfering with the essentials of the catholick communion.—*T. Warton, Life of Sir T. Pope*, p. 41.

Disinféct. *v. a.* Free from infection.

(For example see extract under next entry.)

Disinféctant. *s.* That which frees from any infective quality.

It is well not to confound it [*disinfectant*] with antiseptic, which applies to those bodies which prevent putrefaction. The word *disinfectant* has lately become somewhat uncertain in its meaning, on account of a word being used as its equivalent, viz. *deodoriser*. This latter means a substance which removes odours. In reality, however, there are no such substances known to us as a class. There are, of course, some substances which destroy certain others having an odour, but in all cases the removal of the smell and the destruction or neutralisation of the body must be simultaneous. There is, however, a large class of substances that destroy putrefaction, and the name *disinfectant* is therefore distinctly needed. . . . When the infectious matter and the odoriferous matter are one, as in the case, as far as we know, of putrid flesh, &c., then to *deodorise* is to *disinfect*. We can find then no line of duty to be performed by *deodorisers*, and no class of bodies

that can bear the name, although there may be a few cases where the word may be found convenient. If, for example, we destroy one smell by superadding a greater, that might in one sense be a *deodorising*. . . . The smelling stage is by no means the most dangerous, nor has the use of the word *deodorise* any relation to sanitary matters, except in the grossest sense; it is desirable that persons should look far beyond the mere indications furnished by the nose, and as in science we can find no *deodorisers*, so in practice we need not look for any in the sense usually given to the word. The word may be used for such substances as remove the odour and the putrefaction of the moment, but allow them to begin again. Even in this case *deodorisers* become temporary *disinfectants*, which character all removers of smell must more or less have. . . . Although air acts partly in conjunction with the soil and the rain to cause *disinfection*, and partly by its own power, it also acts mechanically as a means of removing all noxious vapours. The wind and other currents of the air are continually ventilating the ground, and when these movements are not sufficiently rapid, or when they are interrupted by our mode of building, we are compelled to cause them artificially, and thus we arrive at the art of ventilation.—*Ure, Dictionary of Arts, Manufactures, and Mines, Disinfectant.* (Hunt.)

As agents capable of being employed in the *deodorisation* and purification of offensive liquids, such as bilge-water and sewerage-water, there are chloride of zinc . . . perchloride of iron (Ellerman's *deodorising* fluid), . . . but these liquids are not true *disinfectants*, and are merely serviceable in *deodorising* by fixation.—*Chambers's Encyclopædia*, in voce.

Disinfécting. *part. adj.* Having the power to disinfect.

The walls should be well washed with chloride of lime, or Sir W. Burnett's *disinfecting* fluid, after the dogs are removed, and some days or even weeks should elapse before others are placed in them.—*Stonehenge, The Greyhound*, ch. iii.

Disinféction. *s.* Deprivation of the power of infecting.

(For example see extract under Disinfectant.)

Disingenúity. *s.* Disingenuousness: (at least in the following extracts, rather than the opposite to *ingenuity*). Disingenuousness the *commoner* as well as the *correcter* word.

They contract a habit of ill-nature and *disingenuity* necessary to their affairs, and the temper of those upon whom they are to work.—*Lord Clarendon.*

The remarker citing my words, with extreme *disingenuity*, leaves out one half of the sentence.—*Clarke, Evidences of natural and revealed Religion*, preface.

Disingénuous. *adj.* Unfair; meanly artful; viciously subtle; sly; cunning; illiberal; unbecoming a gentleman; crafty.

'Tis *disingenuous* to accuse our age
Of idleness, who all our pow'rs engage
In the same studies, the same course to hold,
Nor think our reason for new arts too old.
Sir J. Denham.

There cannot be any thing so *disingenuous* and misbecoming any rational creature, as not to yield to plain reason and the conviction of clear arguments.—*Locke.*

Disingénuously. *adv.* In a disingenuous manner.

Milton, who had a controversy with [bishop] Hall, in a remonstrance called an Apology for Smectymnuus, published in 1641, rather unsuitably and *disingenuously* goes out of his way to attack these Satires, a juvenile effort of his dignified adversary, and under every consideration alien to the dispute.—*T. Warton, History of English Poetry*, iv. 50.

Disingénuousness. *s.* Attribute suggested by Disingenuous; mean subtlety; unfairness; low craft.

I might press them with the unreasonableness, the *disingenuousness* of embracing a profession to which their own hearts have an inward reluctance. *Dr. H. More, Government of the Tongue.*

Disinhérison. *s.* Act of cutting off, or state of being cut off, from any hereditary succession.

If he stood upon his own title of the house of Lancaster, inherent in his person, he knew it was a title condemned by parliament, and generally prejudged in the common opinion of the realm, that it tended directly to the *disinherison* of the line of York.—*Bacon, History of the Reign of Henry VII.*

The chief minister of the revenue was obliged to prevent and even oppose such *disinherison*.—*Lord Clarendon, History of the Grand Rebellion.*

In respect of the effects and evil consequences, the adultery of the woman is worse, as bringing bastardy into a family, and *disinherisons* or great injuries to the lawful children.—*Jeremy Taylor.*

Is it then just with us to *disinherit*
The unborn nephews, for the father's fault?

That wont'st to love the traveller's benison,
Stoop thy pale visage through an amber cloud,
And *disinherit* Chaos that reigns here
In double nights of darkness and of shades.
Milton, Comus, 332.

Disinhéritance. *s.* Deprivation of the state, rights, or prospects, of inheritance.

The king of England is in no way accountable or amenable to the jurisdiction of the Pope for his rights over the kingdom of Scotland; he must not permit those rights to be called in question. It would be a *disinheritance* of the crown of England and of the royal dignity, a subversion of the state of England, if the king should appear by his proctors or ambassadors to plead on those rights in the court of Rome.—*Milman, History of Latin Christianity*, b. xi. ch. ix.

Disíntegrable. *adj.* Capable of being disintegrated.

Disíntegrating. *part. adj.* Undergoing disintegration.

The same current which brings oxygen to the oyster, also brings it the microscopic-organisms on which it lives: the *disintegrating* matter and the matter to be integrated, coexist under the simplest relation.—*Herbert Spencer, Data of Biology*, § 33.

Disintegrátion. *s.* Process by which anything is disintegrated; condition resulting therefrom.

Oxidation, drought, wind, frost, rain, glaciers, rivers, waves, and other denuding agents effect *disintegrations* that are determined in their amounts and qualities by local circumstances. Acting upon a tract of granite, such agents here work scarcely an appreciable effect; there cause exfoliations of the surface, and a resulting heap of débris and boulders; and elsewhere, after decomposing the feldspar into a white clay, carry away this with the accompanying quartz and mica, and deposit them in separate beds, fluviatile and marine. When the exposed land consists of several unlike formations, sedimentary and igneous, changes proportionably more heterogeneous are wrought. The formations being *disintegrable* in different degrees, there follows an increased irregularity of surface.—*Herbert Spencer, Inductions of Biology*, § 118.

(For another example see first extract under Détritus.)

Disintér. *v. a.* Unbury; take as out of the grave.

The philosopher, the saint, or the hero, the wise, the good, or the great man, very often lie hid and concealed in a plebeian, which a proper education might have *disinterred*.—*Addison.*

Disínterest. *s.* That which is contrary to one's wish or prosperity; that which anyone is concerned to prevent.

That ye indulge this liberty to yourselves or others is to cast a stumbling-block before the children of Israel, and to occasion and encourage many to adhere to the Roman communion, when they ought to separate from her, that there be no prejudice done to my true church, nor *disinterest* to thy kingdom.—*Dr. H. More, Exposition of the Seven Churches*, p. 73.

They judge it the greatest *disinterest* to Rome.—*Glanville.*

Disínterest. *v. a.* Divest of interest or interested motives; render superior to private advantage.

A noble courtesy, falling like rain in due season, enslaves a man more than a market-sale among; Moors; for it conquers the uncompellable mind, and *disinterests* man of himself.—*Feltham, Sermon on St. Luke*, xiv. 20.

Disínterested. *part. adj.* Divested of interest or interested motives; superior to regard of private advantage; not influenced by private profit.

As *disinterested* as you appear to the world, no man is more in the power of that prevailing favourite passion than yourself.—*Swift.*

Thus, such a syllogism as this, 'Every true patriot is *disinterested*; few men are *disinterested*; therefore few men are true patriots;' might appear at first sight to be in the second figure, and faulty: whereas it is Barbara, with the premises transposed: for you do not really predicate of 'few men,' that they are '*disinterested*,' but of '*disinterested* persons,' that they are 'few.'—*Whately, Elements of Logic*, b. ii. ch. iv. § 7.

Even among the instructions which Craterus took with him, one is said to have been, to put Phocion in possession of an Asiatic city, which he should select from four that were to be offered to him. All this may be considered as a pure tribute of *disinterested* reverence for extraordinary virtue, but it was not the less likely to produce a powerful effect on minds not formed to prize virtue as its own reward, or to believe that it could be so esteemed by others.—*Thirlwall, History of Greece*, ch. lvi.

Disínterestedly. *adv.* In a disinterested manner.

And then the orator pronounced a warm panegyric on his friend Somers. 'Would that all men in power would follow the example of my lord keeper! If all patronage were bestowed as judiciously and *disinterestedly* as his, we should not see the public offices filled with men who draw salaries and perform no duties.'—*Macaulay, History of England*, ch. xx.

Disínterestedness. *s.* Attribute suggested by Disinterested; contempt of private interest; neglect of personal profit.

These expressions of selfishness and *disinterestedness* have been used in a very loose and indeterminate manner.—*Sir T. Browne, Vulgar Errours.*

Lycurgus, the prosecutor, was one of the few men then living at Athens, who could undertake such a task with dignity, as conscious of a life irreproachably spent in the service of his country. There are few Athenian statesmen of any age who can bear a comparison with him: Phocion equalled him in honesty and *disinterestedness*: but in his general character, and in his political conduct, seems to fall far below him.—*Thirlwall, History of Greece*, ch. lvi.

Few of her council imitated the noble *disinterestedness* of Walsingham, who spent his own estate in her service, and left not sufficient to pay his debts —*Hallam, History of England*, vol. i. ch. iv.

To nature's renovation brighter charms.
Young, Night Thoughts, ix.

Disjoint. *v. a.*

1. Put out of joint; take to pieces anything jointed.

Yet what could swords or poisons, racks or flame,
But mangle and *disjoint* the brittle frame?
More fatal Henry's words; they murder Emma's fame. *Prior.*

These dispositions, both of prince and people, had not alone induced him [Robert] to engage in so bold a resolution, with such a breach of his duty and trust, without the practices and instigations of the King of France, who grown jealous of King William's greatness, and envious of his felicity, found no better way of lessening both, than to kindle this fire in his own house, and thereby the most sensibly to disquiet his mind as well as to *disjoint* his state, and divide his power.—*Sir W. Temple, Introduction to the History of England*, p. 275.

Were it possible for any power to add to it ever so little, it would at once overstep its bounds; the equilibrium would be disturbed; the framework of affairs would be *disjointed*.—*Buckle, History of Civilization in England*, vol. ii. ch. vi.

'I'm satisfied now—time to give up;' and the corporal began to *disjoint* his rod.—*Sir E. L. Bulwer, Eugene Aram*, b. i. ch. ix.

2. Break at junctures; separate at the part where there is a cement.

And as for his coach, seeing it so villainously used and so ill handled as it was, he would not only have it to be unharnissed as I said before, but also unpinned, *disjointed*, and pulled asunder.—*Harmar, Translation of Beza's Sermons*, p. 384: 1587.

3. Break in pieces; dilaniate.

Disjúdge. *v. a.* Deprive of the character of a judge; unmake as a judge. *Rare.*

Enjoy your mistress, from the whom, I see,
There's no *disjunction* to be made, but by
. . . . your ruin. *Shakespear, Winter's Tale*, iv. 3.

There is a great analogy between the body natural and politick, in which the ecclesiastical, or spiritual part, justly supplies the part of the soul; and the violent separation of this from the other, does as certainly infer death and dissolution, as the *disjunction* of the body and the soul in the natural.—*South, Sermons.*

Disjúnctive. *adj.*

1. Incapable of union.

Such principles, whose atoms are of that *disjunctive* nature, as not to be united in a sufficient number to make a visible mass.—*Grew.*

2. Marking separation or opposition: (as 'I love him, *or* fear him').

There are such words as *disjunctive* conjunctions.—*Watts.*

3. In *Logic.*

A *disjunctive* proposition is when the parts are opposed to one another by *disjunctive* particles: as, 'It is either day or night: the weather is either shiny or rainy: quantity is either length, breadth, or depth.' The truth of disjunctives depends on the necessary and immediate opposition of the parts, therefore only the last of these examples is true; but the two first are not strictly true, because twilight is a medium between day and night; and dry cloudy weather is a medium between shining and raining.—*Watts, Logick.*

A *disjunctive* syllogism is when the major proposition is *disjunctive*: as, 'The earth moves in a circle, or an ellipsis;' but it does not move in a circle, therefore it moves in an ellipsis.—*Ibid.*

Disjúnctive. *s.* Disjunctive conjunction.

Of these *disjunctives* some are simple, some adversative; simple, as when we say, Either it is day, or it is night; adversative, as when we say, It is not day, but it is night.—*Harris, Hermes*, ii. 2.

Disjúnctively. *adv.* In a disjunctive manner; distinctly; separately.

What he observes of the numbers *disjunctively* and apart, reason suggests to be applicable to the whole body united.—*Dr. H. More, Decay of Christian Piety.*

But if the several antecedents have each a different consequent, then the antecedents, being, as before, *disjunctively* granted, you can only *disjunctively* infer the consequents: e.g. if A is B, C is D; and if X is Y, E is F; but either A is B or X is Y; therefore either C is D or E is F. 'If Æschines joined in the public rejoicings, he is inconsistent; if he did not, he is unpatriotic: but he either joined, or not: therefore he is either inconsistent or unpatriotic.' This case, as well as the foregoing, is evidently constructive.—*Whately, Elements of Logic*, b. ii. ch. iv. § 5.

Appears at first but as a bloodshot eye. *Dryden.*

It is to be considered, that the rays, which are equally refrangible, do fall upon a circle answering to the sun's *disk*.—*Sir I. Newton.*

Mercury, whose *disk*
Can scarce be caught by philosophic eye,
Lost in the near effulgence.
Thomson, Seasons, Summer.

The crystal of the eye, which in a fish is a ball, in any land animal is a *disk* or bowl; being hereby fitted for the clearer sight of the object.—*Grew.*

Diskíndness. *s.* Unkindness; disservice.

This discourse is so far from doing any *diskindness* to the cause, that it does it a real service.—*Woodward.*

Dislíke. *s.*

Your *dislikes* to whom I would be pleasing,
Do cloud my joys with danger and with sorrow.
Shakespear, Henry VI. Part III. iv. 1.

God's grace, that principle of his new birth, gives him continual *dislike* to sin.—*Hammond, Practical Catechism.*

   We should not overlook, among the causes that contributed to the dominion of the popes, their prerogative of *dispensing* with ecclesiastical ordinances. The most remarkable exercise of this was as to the canonical impediments of matrimony. . . . It was not until the twelfth that either this or any other established rules of discipline were suppose liable to arbitrary dispensation; at least the stricter churchmen had always denied that the pope could infringe canons, nor had he asserted any right to do so. But Innocent III. laid down as a maxim, that out of the plenitude of his power, he might lawfully dispense with the law, and accordingly granted, among other instances of this prerogative, dispensations from impediments of marriage to the emperor Otho IV. Similar indulgences were given by his successors, though they did not become usual for some ages. The fourth Lateran Council in 1215 removed a great part of the restraint, by permitting marriages beyond the fourth degree, or what we call third cousins; and dispensations have been made more easy, when it was discovered that they might be converted into a source of profit. . . . The *dispensing* power of the popes was exerted in several cases of a temporal nature, particularly in the legitimation of children, for purposes even of succession. —*Hallam, View of the State of Europe during the middle Ages*, ch. vii. pt. 2.

I should define *distemper* in the dog as a fever of a nature similar to typhus, and always characterised by the following symptoms, which generally occur in the order in which they are mentioned:—There is first a dullness and restlessness, with partial loss of appetite, heat and dryness of the nose, rapid but feeble pulse, dull eye, the white of which is generally streaked with dark-coloured blood-vessels. The dog seems extremely sensitive to cold, or to any other disagreeable sensation, as scolding, flogging, &c. The water is scanty and high-coloured, with thirst; and the motions either very costive or loose, and if the latter, often of a pitchy colour. The strength and flesh fail in a remarkably rapid manner, so that the dog is often unable to stand at the end of a few days or a week; the appetite is by that time entirely lost, and frequently the food which is given by force is speedily returned, or passes the bowels unchanged. The respiration generally becomes quicker than natural, though this symptom is not so universal as the others I have enumerated. In fact, all the processes of respiration, circulation, digestion, and secretion, are disturbed in a remarkable manner; and in this, I believe, is the essence of the disease; and the healthy resumption of these functions is always attended by convalescence.—Such are the general and characteristic symptoms of *distemper*.—*Stonehenge, The Greyhound*, p. 65.

Distríbute. *v. a.* [Lat. *distributus*, pass. part. of *distribuo*.]

1. Divide amongst more than two; deal out; dispense.

The king sent over a great store of gentlemen and warlike people, amongst whom he *distributed* the land.—*Spenser, View of the State of Ireland.*

She did *distribute* her goods to all them that were nearest of kindred.—*Judith*, xvi. 24.

2. In *Logic.* See Distributed.

Distríbuted. *part. adj.* [the special and technical import of this word, as given in the chief works on *Logic*, is by no means clearly connected with its derivation; and that influential logicians have not scrupled to say so may be seen in the extract from De Morgan.]

1. Universal.

A term is said to be *distributed* when it is taken universal, so as to stand for everything it is capable of being applied to.—*Whately, Elements of Logic*, i. § 5.

The middle-term ... must be *distributed* once, at least, in the premises; (i.e. by being the subject of an universal, or predicate of a negative, and once is sufficient; since if one extreme has been compared to a Part of the middle-term, and another to the Whole of it, they must have been both compared to the same. No term must be *distributed* in the conclusion which was not *distributed* in one of the premises; for that (which is called an illicit process, either of the major or the minor term) would be to employ the Whole of a term in the conclusion, when you had employed only a Part of it in the premiss; and thus, in reality, to introduce a fourth term: e.g.

'All quadrupeds are animals,
A bird is not a quadruped; therefore
It is not an animal.'—Illicit process of the major.

Again, 'What is related in the Talmud is unworthy of credit: miraculous stories are related in the Talmud: therefore miraculous stories are unworthy of credit.' If this conclusion be taken as A [a universal affirmative proposition], there will be an 'illicit-process of the minor-term;' (since every one would understand the minor-premiss as particular) but a particular conclusion may fairly be inferred. In the case of an illicit-process of the major, on the contrary, the premises do not warrant any conclusion at all.... By these six rules all categorical syllogisms are to be tried; and from them it will be evident: 1st, that nothing can be proved from two particular premises; (since you will then have either the middle term *undistributed*, or an illicit-process. For if each premiss were I [a particular affirmative proposition], there would be no distribution of any term at all: and if the premises were I and O [a particular negative proposition], as

'Some animals are sagacious;
Some beasts are not sagacious:
Some beasts are not animals.'

there would be but one term—the predicate of O—*distributed*; and supposing that one to be the middle, then, the conclusion (being of course negative) would have its predicate,—the major term—*distributed*, which was *undistributed* in the premiss. And, for the same reason, 2dly, that if one of the premises be particular, the conclusion must be particular; e.g.

'All who fight bravely deserve reward:
Some soldiers fight bravely;' you can only infer that
'Some soldiers deserve reward:'

for to infer a universal conclusion would be an 'illicit-process of the minor.'—*Ibid.* ii. 3, § 2.

I will here take the liberty to remark, though not closely connected with the present subject, that Archbishop Whately is not quite right in saying that in affirmative propositions the predicate is never *distributed*; besides the numerous instances where this is, in point of fact, the case, all which he justly excludes, there are many in which it is involved in the very form of the proposition. Such are those which assert identity or equality, and such are all definitions. Of the first sort are all the theorems in geometry, asserting an equality of magnitudes or ratios, in which the subject and predicate may always change places. It is true that in the instance given in the work quoted, that equilateral triangles are equiangular, the converse requires a separate proof, and so in many similar cases. But in these the predicate is not *distributed* by the form of the proposition; they assert no equality of magnitude. The position, that where such equality is affirmed, the predicate is not logically *distributed*, would lead to the consequence that it can only be converted into a particular affirmation. A critic upon the first edition has observed, that nothing is clearer than that in these propositions the predicate is not necessarily *distributed*; and even hints a doubt whether I understood the terms rightly. This suspicion of my ignorance as to the meaning of the two commonest words in logic, I need not probably repel; as to the peremptory assertion of this critic, without any proof beyond his own authority, that in propositions denoting equality of magnitude, the predicate is not necessarily *distributed*, if his own reflections do not convince him, I can only refer him to Aristotle's words: ἐν τούτοις ἡ ἰσότης ἐνότης; and I presume he does not doubt that in identical propositions of the form, A est A, the *distribution* of the predicate, which is the same thing, is manifest.—*Hallam, Introduction to the Literature of Europe*, pt. iii. ch. iii. § 130, note.

The comparison of each of the two terms must be equally with the whole, or with the same part of the third term; and to secure this, (1) either the middle term must be *distributed* in one premiss at least, or (2) the two terms must be compared with the same specified part of the middle, or (3), in the two premises taken together, the middle must be *distributed*, and something more, though not *distributed* in either singly.—*Thomson, Outline of the Laws of Thought*, § 39.

Here, though the word *Distributed* in the first of the three conditions decidedly means universal, in the third, as suggested by the words 'something more,' a modification in the way of import is suggested, one that leads to the view suggested by the editor, to whose doctrine the following extract is a preliminary:

By *distributed* is here meant universally spoken of. I do not use this term in the present work, because I do not see why, in any deducible meaning of the word *distributed*, it can be applied to universal as distinguished from particular.—*De Morgan, Formal Logic*, ch. vii.

2. It is submitted that if *Distributed* is to be connected with its etymology, especially with the element *dis-*, its meaning must be sought in the middle term of the numerical definite syllogism (or its approximations), and in the syllogism of identity. Thus, if

More than half Y is X,
and
More than half Y is Z,
Some Z must be X,
vice versâ, Some X must be Z.

So also in

Y is X,
The same Y is Z,
Some Z is X.

That syllogisms of this kind are wholly ignored by most writers, and but inadequately recognized by others, is well known, an inference from two particular premises being held to be impossible. Without going farther into the question of the rightness or wrongness of this view, it is submitted that it is in a logic wherein the preceding forms are recognized, and in that only, that the connection of the word under notice with its derivation is intelligible; add to which that in a logic like the present, where it keeps its place as a term, but without being any longer appropriate, it is, of course, vague and obscure.

Speaking roughly, *distributed* means Universal. ... Speaking more closely, it means Universal in one premiss; it being a rule in the ordinary logic that no conclusion is possible unless one premiss be, either negatively or affirmatively, universal. Assuredly there is no etymological connexion between the two words.... Let it mean 'related to more than one class,' and the power of the prefix *dis-*, at least, becomes intelligible. For all the purposes of logic this is not enough; inasmuch as the particular character of the relation (all-important in the structure of the syllogism) is not, at present, given. It is enough, however, to give import to the syllable *dis-*. In

affirmative propositions this relation is connective on both sides, i.e. the middle term forms part of both the others. In negative propositions this relation is connective on one side, disjunctive on the other. In—

All men are mortal,
All heroes are men,

the middle term men forms a part of the class called mortal, by being connected with it in the way that certain contents are connected with the case that contains them; whilst it also stands in connexion with the class of heroes in the way that cases are connected with their contents. In—

No man is perfect,
Heroes are men,

the same double relation occurs. The class man, however, though part of the class hero, is no part of the class perfect, but, on the contrary, expressly excluded from it. Now this expression of exclusion constitutes a relation—disjunctive indeed, but still a relation; and this is all that is wanted to give an import to the prefix *dis-* in *distributed*. Wherever there is *distribution* there is inference, no matter whether the *distributed* term be universal or not. If the ordinary rules for the structure of the syllogism tell us the contrary to this, they only tell the truth, so far as certain assumptions on which they rest are legitimate. These limit us to the use of three terms expressive of quantity—All, None, and Some; and it is quite true that, with this limitation, universality and *distribution* coincide. Say that

Some Y is X,
Some Z is Y,

and the question will arise whether the Y that is X is also the Y that is Z. That Some Y belongs to both classes is clear; whether, however, it be the same Y is doubtful. Yet unless it be so, no conclusion can be drawn. And it may easily be different. Hence, as long as we use the word Some, we have no assurance that there is any *distribution* of the middle term. Instead, however, of Some write All, and it is obvious that some Y must be both X and Z: and when such is the case—

Some X must be Z, and
Some Z must be X.

Universality, then, of the middle term in one premiss is, by no means, the Direct condition that gives us an inference, but only a Secondary one. The direct condition is the *distribution*. Of this, the universality of the middle term is only a Sign, and it is the only sign we have, because All and Some are the only words we have to choose from. If others were allowed, the appearance which the two words (*distributed* and Universal) have of being synonymous would disappear. And so they do when we abandon the limitations imposed upon us by the words All and Some. . . . In each of these formulæ there is *distribution* without universality, i.e. there is *distribution* with a quality other than that of universality as its criterion.—*Dr. R. G. Latham, Transactions of the Philological Society*, December 18, 1857.

[Here, with a few unimportant exceptions, ends the long list of the words compounded with **Dis-**. Like *co-* and *con-*, this prefix is of Latin, rather than of English, origin; and, like *co-* and *con-*, it is only used correctly when the word which it precedes is Latin also. The rule thus suggested is, however, often violated, a hybrid compound being the result.

The notion conveyed by **Dis-** is that of *separation*, *difference*, *dispersion*, and, more remotely connected with the original idea, *change*. Hence it sometimes does little more than convert a word into its opposite, as in Displeasure contrasted with Pleasure. The other words which take a similar place in composition, with which it most closely coincides, are *mis-* and *trans-*; though when each keeps its power, the difference is sufficiently clear; compare Displace and Dispose with Misplace and Transpose. In many cases, however, it is used improperly, either as an equivalent to one of these elements, or to express a difference too slight to have become generally recognized, in which case the word fails to take root in our language. In others it is superfluous; the meaning (as in Dispread, Dissunder) being sufficiently conveyed by the simple term. Hence, as may be seen in the preceding entries, many of its compounds are either *rare* or *obsolete*.]

Diversely. *adv.* [That *diversely* is the true derivative from *diverse* is clear. Less clear, however, is the double question: (1) as to what Diverse is in the way of accent (i.e. whether *díverse* or *divérse*), and (2) as to the word Dívers, an adjective with an adverb (*diversly*) to match.

1) In Richardson the accentuation is *díverse*. He also gives *cónverse*. That this last is the commoner pronunciation is beyond doubt; and so is the fact of *converse* and *diverse* being words of similar form and origin: so much so, that, at the first view, the analogy of one ought to regulate the sound of the other. But *cónverse*, unlike the word under notice, has a verb in frequent use (*convérse*), from which it has to be distinguished; Divérse (verb) being rare. Still, as it is somewhat more than a merely possible form, and as the current rule is in favour of the noun taking its accent on the first syllable, the analogy of *cónverse* is a just one—as far, at least, as it goes. Opposed to it, however, is that of *revérse*, where noun and verb are not only accented alike, but accented on the last syllable. The editor would keep these accentuations; adding that where they appear the *s* should be sounded as the *-ce* in *pence*, and not as the *s* in *pens* (which, to the *ear*, is *z*).

2) This distinguishes the words under notice from Divers (sounded *diverz*), which, with some of the older writers at least, is, apparently, the root of the adverb Diversly. In the 'sundry times and *divers* places' of the Prayerbook, it is submitted, not only that the reading is always this, but that a change to *divérs* would impair the beauty of the sentence to which it belongs. Whether the pronunciation has grown out of the spelling, or the spelling represents the original pronunciation, is another question. The editor thinks that the form is catachrestic. Where there is a final *-s* there is generally the sign of a *plural* number; and in most cases this *s* is sounded as *z*; and that *divers* is limited to the plural is clear. We may say a *different* way, and a *diverse* way, but not a *divers* way. The difference between *diversely* derived from *diverse* sounded *díverse*, but with the *e* omitted (*diversly*), and *diversly* direct from *divers*, is, in many cases, difficult to determine; nor is it important. Pope's *diversly* is as likely to be the derivative of *díverse* (that being his spelling and pronunciation) as the *diversly* (from *divers*) of the older writers. In the present work the two forms are entered separately.]

4. Rotatory; whirling.

The reeling clouds
Stagger with *dizzy* poise, as doubting yet
Which master to obey. *Thomson, Seasons, Winter.*

Dízzy. *v. a.* Whirl round; make giddy.

Not the dreadful spout,
Which shipmen do the hurricano call,
Shall *dizzy* with more clamour Neptune's ear
In his descent, than shall my prompted sword
Falling on Diomede.
Shakespear, Troilus and Cressida, v. 2.

To divide him inventorially would *dizzy* the arithmetick of memory.—*Shakespear, Hamlet*, v. 2.

Do. *v. a.* preterite, *did*; past part. *done*. [from A.S. *don*.]

1. Act; practise; perform; achieve; transact.

They help, who hurt so small
And he hath nothing *done*, that *doth* not
Learn to live well, that thou may'st die
To live and die is all we have to *do*. *Sir*
What is the reason a man's arm won't
frown, and *do* all the intellectual postures
countenance?—*Collier.*

2. Make; cause. *Obsolete.*

A fatal plague which many *did* to dye.
Spenser, Faerie Queen.

Nought can quench mine inly flaming side,
Nor sea of liquor cold, nor lake of mire,
Nothing but death can *do* me to respire. *Ibid.*

We *do* you to wit.—2 *Corinthians*, viii. 1.

[This means, 'we make you to know;' *wit* being a verb preceded by *to*, like the verbs in the preceding extracts, the object being a pronoun, and either *make* or *cause* being capable of being substituted for *do*.]

3. In the following the exact equivalent is less clear, being *render* or *enact* in the first two instances. The third means 'according to their consciences,' the construction being obscure, inasmuch as *conscience* may possibly mean 'conscientious duty.'

May one, that is a herald and a prince,
Do a fair message to his kingly ears?
Shakespear, Troilus and Cressida, i. 3.

Pindarus is come
To *do* you salutation from his master.
Id., Julius Cæsar, iv. 3.

The jury prayed of the senate a guard, that they might *do* their consciences.—*Bacon.*

If there be any good thing to be done,
That may to thee *do* ease, and grace to me,
Speak to me. *Shakespear, Hamlet*, i. 1.

4. Thus far the power of *do*, as an active or transitive verb, is clear. In the following instances it takes the character of an intransitive or neuter one. Preceded by *have*, and followed by *with*, it means *finish*; in which case the noun is governed, not by the verb, but by the preposition; the verb being left without a case. In an ordinary word this would make it neuter at once; yet there is a notable difference between 'I have *dealt with* such a person,' and 'I have *done with* such a person.' In the former, *deal* means 'have *acted as a dealer*,' which is a very vague term. In the latter, *do* is by no means equivalent to '*be a doer*.' This is because *do* is a word which conveys not only the special notion of *action*, but of some object acted on; so that 'I have *done with* them' means '*done what I had to do*.' At any rate, it makes the doctrine that *done* is an active verb with its case understood a probable one. The word, then, if treated as one having a neuter character, is equivocal. Again, the notion of *end, finish*, or *conclude*, is conveyed by the form of the construction (that of the past participle) rather than by the meaning of the verb *do* itself, which has simply its first sense. To speak of an action as past, with the implication that it will not be reverted to (and this is always conveyed by the construction), is to pronounce it finished.

No men would make use of disunited parties to destroy one body, unless they were sure to master them when they had *done with* them.—*Bishop Stillingfleet.*

I have *done with* Chaucer, when I have answered some objections.—*Dryden.*

Having *done with* such amusements, we give up what we cannot disown.—*Pope.*

5. In the following, the departure from a strict active sense, and the approach to a neuter, is clearer.

No man who hath to *do* with the king, will think himself safe, unless you be his good angel, and guide him.—*Bacon.*

6. The doubts involved in the next construction require a reference to Do, from *deogan*; the sense being Fare, be in regard to sickness or health.

Good woman, how *do'st* thou?—The better that it pleases your good worship to ask.—*Shakespear, Merry Wives of Windsor*, i. 4.

The editor remarks that in entering these

last three senses as active, he merely follows Johnson and Todd.

7. Construction of *do* with another verb. Johnson writes:

'To *do* is used for any verb to save the repetition of the word; as, "I shall come, but if I *do* not, go away;" that is, if I come not.'

Then quoting—

Thus painters Cupids paint, thus poets *do*,
A naked god, blind, young, with arrows two.
Sir P. Sidney.

If any thing in the world deserve our serious study and consideration, those principles of religion *do*.—*Archbishop Tillotson.*

Take all things which relax the veins; for what *does* so, prevents too vigorous a motion through the arteries.—*Arbuthnot.*

Here *do* comports itself as a verb much as *thing* and *one* comport themselves as substantives and pronouns; *thing* being a name for almost any object which the class of substantives includes, and *one* serving for almost any object which comes under the class of pronouns. In like manner *do* is a term denoting an action, verb being the name of the class to which such terms belong. Such being the case, it can stand in the verb's place.

8. By this the construction of *do* followed by another verb, such as *I do* or *did love*, was probably suggested; though the details both of its history and logical import are obscure. That the verb is in the infinitive mood is evident from the instances presented by those languages wherein the infinitive has an inflexion, as *thaten winken* = *did wink* in German. That the construction, then, is, in the main, the same as that of *shall*, *will*, *may*, *must*, and *let*, is certain; the difference, however, is important. *Do*, instead of meaning something as different from the verb which follows it as *shall*, *will*, &c., are from *call*, *speak*, and the other verbs with which they may be connected, means the same; i.e. it represents the verb much as it did in the extracts under 7. It is often, however, emphatic. Johnson calls it a verb of 'vehement command or earnest request,' as, 'Help me, *do*;' 'Make haste, *do*.' Adding—

If thou hast lost thy land, *do* not also lose thy constancy; and if thou must die a little sooner, yet *do* not die impatiently.—*Jeremy Taylor, Rule and Exercises of Holy Living.*

Loose me.—I will free thee.—
Do,—and I'll be thy slave. *Dryden, King Arthur.*

From 'Help me, *do*,' to '*Do* help me,' as long as there is the conveyance of an emphasis, the transition is not violent; and the use of *do* so often coincides with an emphasis of some kind that the construction has been called the emphatic, and that, in many cases, with good reason. It generally shows itself to be this by conveying a statement which answers an implied doubt.

'I *did* love him, but scorn him now.'
'I *do* not know the man.'

As if it had been either said or suggested that 'the man was *not* loved at one time,' or that 'he *was* known.'

9. Still, it is admitted that this is not always the case.

The Turks *do* acknowledge God the Father, creator of heaven and earth, being the first person in the Trinity, though they deny the rest.—*Bacon, Advertisement touching a Holy War.*

The extract being preceded with the specific statement that here it is expletive; though it would not be so if the Turkish acknowledgement of a God had been denied. In considering this, we must take our examples from prose only. In verse the additional syllable may be inserted for the sake of the metre.

10. In interrogations, whatever may have been the origin of the construction, the emphatic element is generally at its minimum. We rarely say 'Know you him?' almost always, '*Do* you know him?'

11. The same applies (even more generally) to negatives. It is in very few cases (such as I *dare not*, I *cannot*, and words of a peculiar kind) that we make a negation without using the circumlocution with *do*, rather than the simple verb: 'I *do not* know' being infinitely commoner than 'I know *not*.'

And this leads us to an apparent anomaly. The combinations just given (*dare not*, *know not*) are examples of a rule which in English is absolute and without exception, viz. that the negative particle *not* always follows, and never precedes, its verb; *I not know* being an impossible form. Insert, however, *do* (*I do not know*), and the case is altered. This is because *do* is the verb upon which the negation turns.

The nature of the past form *did*.—Of the two *d*s in this word, one belongs to the root, and is the *d* in *do*, the other is the sign of a tense. Which is which? Contrary to the general rule and, until lately, the general explanation, it is the *first d* which gives the tense, the *second* which represents the original verb; a view originally suggested by the participle *done*, and confirmed by a reference to the conjugation in the Mesogothic; which shows that such preterites as are formed by changing the vowel (*swim*, *swum*; *speak*, *spoke*) originated in a reduplication, like τέτυφα, *cecidi*, &c., in Greek and Latin; and, so doing, coincided with the Perfect of the classical languages rather than with the Aorist. Except, however, in the Mesogothic, where there are numerous words in which it is preserved (*sai-salt*, *lai-lo*, from *salta*, *laia*), the reduplication has been lost; *did* being one of the few words in which it has survived. See also Hight = called.

Done up. Ruined.

The young Duke had also announced to his relatives, and to some of his particular friends, that he intended to travel for some time, and he well knew that their charitable experience would understand the rest. They understood everything. The Marquess' party daily increased, and 'The Universe' and the 'New World' announced, that the young Duke was '*done up*.'—*Disraeli the younger, The young Duke.*

Do. *v. n.* [from A.S. *dugan*.—see second extract.] Succeed; fulfill a purpose.

You would do well to prefer a bill against all kings and parliaments since the conquest; and, if that won't *do*, challenge the crown.—*Collier, Essay on Duelling.*

[In the phrase This will do = This will answer the purpose, the word *do* is wholly different from the word *do* = act. In the first case it is equivalent to the Latin Valere, in the second to the Latin Facere. Of the first, the Anglo-Saxon inflection is *deáh*, *dugon*, *dohte*, *dohtest*, &c. Of the second it is *dó*, *dós*, *dyde*, &c. In the present Danish they write *duger*, but say *duer*: as *duger det noget?* = Is it worth anything? pronounced *door deh note?* This accounts for the ejection of the *g*. The Anglo-Saxon form *deáh* does the same. In Robert of Bourne the preterite is *deih*. . . . We cannot, however (although we ought), say That doed well enough, though a Dane says Det *dugede* nok.—*Dr. R. G. Latham, English Language, Syntax*, ch. xxxiii.]

Thus far there is no ambiguity. The connection, however, of the notions conveyed by *suit*, *be adequate to*, *thrive*, *fare*, *comport one's self*, and *act*, creates difficulties. In

Come, 'tis no matter; we shall *do* without him.
Addison.

do may be rendered by *act*, *succeed*, or *get on*. The same applies to *do*, used when speaking of a person's health; upon which Wedgwood has the following observation.

It is often said that *do* in the inquiry after a person's health is properly the Scotch *dow*, Dutch *doogen*, *deugen*, German *taugen*, to be able or good for, to avail, to thrive; but this is a mistake. To do is to act, or often to serve as the medium of active exertion. We ask how a thing does, meaning, how does it perform the office expected of it, and the word is used in a very similar sense in the inquiry, How do you do?—How do you get on? How do you perform the offices of life? It is a simple translation of the Old French, Comment le faites-vous?

'Puis li a dit par grant douçor,
Sire, comment le *faites*-vos?
Dame, bien, dit le Segretains.'
(Fabliaux et Contes, 1. 245.)

'David demanded of him how Joab *did*, and how the people *did*, and how the war prospered.' In the Livre des Rois: E David—enquist cume Joab le *fist*, e li poples, e coment il lé feissent del siege—and how they got on with the siege.—*Wedgwood, Dictionary of English Etymology.*

That the foregoing doctrine applies to many cases is beyond doubt. Whether it applies to all is another question. In the very common phrase, 'How *do* you *do*?' it certainly eases the construction to suppose it to mean 'How *do* you *fare*?' As it is, the editor has noticed the word under both entries.

In the following extract the construction is obscure; inasmuch as it is doubtful whether the word in *-ing* (*assenting*) is to be taken as a participle with a gerundial construction, or as a substantive, i.e. a verbal abstract.

We have not yet *done with* assenting to propositions at first hearing, and understanding their terms.—*Locke.*

The omission of *with* introduces another modification.

You may ramble a whole day, and every moment discover something new; but when you have *done*, you will have but a confused notion of the place.—*Spectator.*

Here the full construction would be '*done rambling*;' the ambiguity being, as in the foregoing instance, with regard to the import of *-ing*. Here, however, as in all the previous ones, *finished* may be written instead of *done*.

The Dutch sailors called them Walckvögel.... In 1602, Willen sailed from Batavia.... He makes repeated mention of *Dod-aarsen.*... It is not easy to determine the date when the synonymous words Dodars, from which our name *Dodo* is derived, and Dronte were first introduced.... The earliest use ... may be from 1613, when Verhuffen's voyage was published: here, however, it occurs under the corrupt form of Totersten. There is little doubt that the name is derived from *dodoor*, which, in the Dutch language, means sluggard ... *Dodoors* not improbably a cant word among Dutch sailors analogous to our lubber.... Sir Thomas Herbert was the first to use ... *Dodo.* He tells us that it is a Portuguese word, and, in fact, we find that *doudo*, in the last named language, means foolish or simple. 5. Stir; bustle; tumult.

Shall there be then, in the mean while, no *doings?* —*Hooker, Ecclesiastical Polity.*

After such miraculous *doings*, we are not yet in a condition of bringing France to our terms.—*Swift.*

Doit. *s.* [Fr. *d'huit* = ⅛ of a penny.] Used *metaphorically* for any small piece of money.

When they will not give a *doit* to relieve a lame beggar, they will lay out ten to see a dead Indian.—*Shakespear, Tempest*, ii. 2.

In Anna's wars a soldier, poor and old,
Had dearly earn'd a little purse of gold;
Tir'd with a tedious march, one luckless night,
He slept, poor dog! and lost it to a *doit.* *Pope.*

'And so, I suppose, this Miss Wyndham, his daughter, will have nothing at all?' 'Not a *doit*,' said he, starting and settling himself with his own feet, and the four legs of his chair, on the floor again.—*Emilia Wyndham*, ch. xvii.

Dole. *s.* [root of *deal* = distribute.]

1. Act of distribution or dealing.

It was your presurmise,
That in the *dole* of blows your son might drop.
Shakespear, Henry IV. Part II. i. 1.

At her general *dole*
Each receives his ancient soul. *Cleaveland.*

2. Anything dealt out or distributed; allowance; share; lot.

But lest some may haply think, or thus expostulate with me after this debatement, who made you the busy almoner to deal about this *dole* of laughter and reprehension, which no man thanks your bounty for.—*Milton, Apology for Smectymnuus.*

3. Provisions or money distributed in charity, at any time: (formerly at *funerals* more especially).

Our *doles* and funeral meals, if they be our own early provisions, will then spend the better.—*Jeremy Taylor, Rule and Exercises of Holy Dying*, ch. iv. § 9.

Clients of old were feasted; now a poor
Divided *dole* is dealt at th' outward door,
Which by the hungry rout is soon dispatch'd.
Dryden, Juvenal's Satires.

Construction *adjectival.*

I know you were one could keep
The buttery-hatch still lock'd, and save the chippings,
Sell the *dole*beer to aqua-vitæ men.
B. Jonson, Alchemist.

4. Blows dealt out.

I have seen him . . .
In the head of a troop stand as if he had been rooted,
Dealing large *doles* of death.
Beaumont and Fletcher, Island Princess.

What if, his eye-sight, for to Israel's God
Nothing is hard, by miracle restor'd,
He now be dealing *dole* among his foes,
And over heaps of slaughter'd walk his way?
Milton, Samson Agonistes, 1527.

Happy man be his dole. Good luck to him.

Let every man beg his own way, and *happy man be his dole.—Beaumont and Fletcher, Wit at several Weapons.*

Let us, that are unhurt and whole,
Fall on, and *happy man be's dole.*
Butler, Hudibras.

Dole. *s.* [from Lat. *dolor.*] Grief; lamentation.

Our sometime sister, now our queen,
Have we, as 'twere, with a defeated joy,
With mirth in funeral, and with dirge in marriage,
In equal scale weighing delight and *dole*,
Taken to wife. *Id., Hamlet*, i. 2.

They might hope to change
Torment with ease, and soonest recompense
Dole with delight. *Milton, Paradise Lost*, iv. 892.

Dole. *s.* [N.Fr.] Boundary: (this sense is yet used in some parts of England; a *dolestone* in Norfolk is a landmark).

Cursed be he which translateth the bounds and *doles* of his neighbour.—*Injunctions of Queen Elizabeth*, sign. B. iii.: 1559.

Accursed be he, saith Almighty God by Moses, who removeth his neighbour's *doles* and marks.—*Homilies*, b. ii. *Exhortation for Rogation Week.*

[*Doles, dools*, slips of pasture left between furrows of ploughed lands. (Bailey.) 'Cursed be he that translateth the bounds and *doles* of his neighbour.' (Injunction 19 Elizabeth in Brand's Popular Antiquities.) A *dole-meadow* is a meadow in which the shares of different proprietors are marked by *doles* or landmarks. Now the simplest division of property would be a strip of turf left unploughed. Platt Deutsch, *dole*, a small ditch with the sod turned up beside it for a landmark; *uutdolen*, so to mark the division of properties with a ridge and furrow. (Bremisches Wörterbuch.) The word is probably at bottom identical with Welsh *twll*, a pit, Bohemian *díl*, a pit, ditch; then (as the ditch and bank are made by flinging on the one side the earth taken up from the other) applied both to ridge and furrow, and subsequently appropriated to either as accidental circumstances might determine. We find the same duplicity of meaning in *dike*; and *mote*, the term by which we designate the ditch of a castle, signifies in Italian the mound on which the castle is built. — *Wedgwood, Dictionary of English Etymology.*]

Dole. *v. a.* Distribute as a dole; deal out.

He *doles* out his morality in periodic apothegms. —*Lamb, Letter to Coleridge.*

2. Melancholy; afflicted; feeling grief; sorrowful.

When first he spied my love. *Sir P. Sidney.*

3. Dismal; impressing sorrow; dolorific.

Dólefully. *adv.* In a doleful manner; sorrowfully; dismally; querulously.

Dólesomeness. *s.* Attribute suggested by Dolesome.

If the exceeding glory of heaven cannot countervaile the *dolesomeness* of the grave, what doo I be leaving?—*Bishop Hall, Meditations, Of Death.* (Ord MS.)

Dólgbote. *s.* This is entered in the Law Dictionaries, Tomline and Jacob, with little

more than the notice that it is the A.S. *dolg* = wound, maim, scar, or similar bodily injury, and *bote* = penalty, fine, recompense for injury; the term being apparently Anglo-Saxon rather than English; or, at least, obsolete or rare in modern law. Dog-bolt is, probably, a corruption of this, and, at the same time, a proof showing how early the true meaning of the word was lost. If this derivation be true, a 'dog-bolt' lawyer was an action-seeking pettifogger, who first provoked an assault and then sued for damages.

Dolichocéphalic. *adj.* [Gr. δολιχός = long, κεφάλη = head; as a new term it might conveniently be spelt with a *k*, *-kephalic.*] Long-headed: (term used in *Ethnology* to denote a head of the African type, i.e. one with its diameter from side to side notably shorter than its diameter from front to back; the opposite to *brachycephalic*).

To him [Retzius] we owe the terms brachycephalic and *dolichocephalic.*—*Busk, On a Systematic Mode of Craniometry.*

Dolichocéphalism. *s.* Condition, or form, indicated by Dolichocephalic.

(For example see next entry.)

Dolichocéphalous. *adj.* Same as Dolichocephalic.

In the sciences of observation, 'it is the averages which afford the best evidence; they alone have an absolute value, and lead to positive results.' Now we find that the twenty-five skulls from long barrows have an average relative breadth of .71, which, according to the view here adopted, is all but absolutely *dolichocephalous*; whilst the twenty-five skulls from the round barrows have an average relative breadth of .81, which even exceeds the brachycephalous standard. The two classes differ nearly as much in their relative breadth as do a series of the skulls of Hindoos or negroes from others of Germans or Slavonians. Surely, if *dolichocephalism* and brachycephalism have ever, as characters, a race-value, they have it in this instance. By mingling the skulls of the one category with those of the other, it is possible to modify the averages to almost any extent, in proportion to the amount of admixture, and in this way to mask and confuse the actual results. Thus, if the two classes of skulls be in equal numbers, as in the table before us, the relative breadth would be .76, or almost exactly that of the ovoid or orthocephalic type; and so the *dolichocephalism* of the one, and the brachycephalism of the other, would be equally lost sight of in such a method or analysis.—*Dr. Thurnam, On British and Gaulish Skulls, Memoirs, &c., Anthropological Society of London*, p. 477: 1865.

Dóllittle. *s.* Term of contempt for one who professes much and performs little.

Dóllmaker. *s.* Maker of dolls.

(For example see extract under Doll.)

Dólmen. *s.* In *Archæology.* Breton name for a chambered variety of cromlech.

This occipital flatness was a characteristic of the skulls of ancient Gauls. It exists in many contained in the Galerie Anthropologique, at the Jardin des Plantes, and is quite obvious in some of those derived from the excavation of the *dolmen* at Meudon, near Paris. . . . It ought not to be omitted to be mentioned here, that the late learned and excellent Swedish craniologist, Professor A. A. Retzius, designated this and the other brachycephalic skulls derived from the Meudon *dolmen*, Basque. Arndt, Rask, Rudolf Keyser, Nilsson, and others had argued in an erudite manner, that all Western Europe in the oldest period was inhabited by a so-called Turanian race, who had brachycephalic skulls, of which the Finns and the Basques are the only representatives. On the discovery of many crania of this form among the osseous relics of the *dolmen*, at Meudon, [he] regarded this . . . to be fully proved, and he subsequently treated it as an established fact, and boldly asserted that these were the skulls of Basques, i.e. of the primeval race now supposed to be represented by the Basques.—*B. Davis, On the Crania of the Ancient Britons, Natural History Review*, no. 7, p. 293.

Dólomite. *s.* In *Geology.* Magnesian limestone.

The great geological feature of the island is, however, the profusion of gneiss, and the various new forms arising from its disintegration. In the mountains, with the exception of occasional beds of *dolomite*, no more recent formations overlie it; from the period of its first upheaval, the gneiss has undergone no second submersion, and the soil which covers it in these lofty altitudes is formed almost entirely by its decay. Rubies, both crystalline and amorphous, are also found in a particular stratum of *dolomite* of Bullatotte and Badulla, in which there is a peculiar copper-coloured mica with metallic lustre.—*Sir J. E. Tennent, Ceylon*, pt. i. ch. i.

This, by the softness and rarity of the fluid, is insensible, and not *dolorifick.*—*Arbuthnot, On the Effects of Air on human Bodies.*

Dólorous. *adj.*

1. Sorrowful; doleful; dismal; gloomy; impressing sorrow.

We are taught by his example, that the presence of *dolorous* and dreadful objects, even in minds most perfect, may, as clouds, overcast all seasonable joy.—*Hooker, Ecclesiastical Polity.*

2. Painful.

How doth thine own weight torment thee, whiles thy whole body rests upon this forced and *dolorous* hold, till thy nailed feet bear their part in a no less afflictive supportation!—*Bishop Hall, Contemplations, The Crucifixion.*

3. Pain; pang.

Dólphin. *s.* Cetaceous animal so called.

Though the old genus Delphinus has now been broken down into no less than nine subdivisions, and there are many species in them, yet in the genus of *dolphins* proper the number of species amount to nearly twenty. . . . The general features which distinguish the [common] dolphin are few and simple. Their snout is considerably elongated, broad at the base, round at the extremity. . . . It used to be held that the common *dolphin* was an inhabitant of every sea throughout the world. . . . A very different opinion is now gaining ground. . . . the *dolphin* with 'its many dying colours,' mentioned in many books and sung by modern poets, is not this, but quite a different animal, . . . the beautifully coloured Coryphæna Hippuris, the Dorado of the Portuguese; and it would be well if its popular name were altogether dropped.—*Hamilton, Whales*, in *Naturalist's Library.*

Dolt. *s.* Heavy stupid fellow; blockhead; thickskull; loggerhead.

Let *dolts* in haste some altar fair erect
To those high powers which idly sit above.

As ignorant as dirt! *Shakespear, Othello*, v. 2.

They neither have the hearts to stay,

Mistook at first for thunder-bolts. *Swift.*

Dametas, the most arrant *doltish* clown, that ever was without the privilege of a bauble.—*Sir P. Sidney.*

If I have since felt lassitude and weariness at the common-place suppositions of these white-waistcoated wise-acres, relieved only by a sort of indignation at the *doltish* stupidity of their fancies and calculations, I doubt very much whether I was ever so much worried in after-life by their elaborated nonsense as I was by Tom Hickson's conversation on the day to which I now refer.—*Theodore Hook, Gilbert Gurney*, vol. ii. ch. i.

Dóltishness. *s.* Attribute suggested by Doltish; folly; stupidity.

We have nothing but scurrility, unworthy of any chaste ears; or some extreme shew of *doltishness*, indeed, fit to lift up a loud laughter, and nothing else.—*Sir P. Sidney, Defence of Poesy.*

Dome. *s.* [see last extract.]

1. Building; house; fabric.

Though lightning strike the *dome* again,
The man who built it shall be prais'd. *Prior.*

2. Hemispherical arch; cupola.

And urns, and *domes*, and cells, and grottoes.
Shenstone.

[It is doubtful how the term *dome* came to be applied to a cupola or vaulted roof. A cathedral is in Italian *duomo*, in German *dom*, and a *dome* may be so called because it was the ornament of a cathedral church. A church in general was called *domus Dei*, the house of God, and probably the name was given to a cathedral church par excellence. On the other hand we find that the Greek δωμα was used for a roof. '*Doma* in Orientalibus provinciis ipsum dicitur quod apud Latinos tectum, in Palæstina enim et Ægypto—non habent in tectis culmina sed *domata*, quæ Romæ vel Solaria, vel Mæniana vocant, id est, plana tecta quæ transversis trabibus sustentantur.' (St. Jerome in Ducange.)—*Wedgwood, Dictionary of English Etymology.*]

Dómebook. *s.* See Domesday.

Dómesday. *s.* Element in the triple compound Domesday-book; a *proper*, rather than a *common*, term, but one requiring notice. One of its derivations is *domus Dei*, from being kept in an enclosure so called, i.e. *God's house*; and, if this be true, the present spelling is preferable, even on etymological grounds, to *Doomsday*. But this origin is unsatisfactory; it being nearly certain that the *dome* is the ordinary *doom* = judgement. If so, the present spelling rests upon the word being a proper, rather than a common, term—*Domesday* being the original spelling. The meaning of *-day* is more doubtful. A *domesday* roll was probably a title-deed shown on certain court-days.

Domebook, liber judicialis, [was] a book composed under the direction of Alfred, for the general use of the whole kingdom, containing the local customs of the several provinces of the kingdom. This book is said to have been extant so late as the reign of Edward IV., but is now lost. . . . *Domesday* or *Domesday-book* [is] a most ancient record, made in the time of William I., and now remaining in the Ex-

chequer, consisting of two volumes, a greater and a less. . . . There is also a third book, which differs from the others more in form than in matter. . . . And there is a fourth book, kept in the Exchequer, which is called *Domesday*, and, though a very large volume, is only an abridgement of the others. Likewise a fifth book is kept in the Remembrancer's office in the Exchequer, which has the name of *Domesday*, and which is the very same with the fourth before mentioned. Our ancestors had many *domebooks*. . . . The addition of *-day* to this book was not made with any reference to the final day of judgment. . . . There is an ancient roll in Chester Castle called *Domesday* roll. At York, Worcester, and other cathedrals, these registers or cartularies are called *Domesday* books.—*Tomline, Law Dictionary.* (Granger.)

We learn from the Saxon Chronicle, that in the 19th year of king William's reign, an invasion was apprehended from Denmark. . . . As soon as the danger was over, the king held a great council to enquire into the state of the nation: the immediate consequence of which was the compiling of the great survey called *Domesday* Book; which was finished the next year: and in the latter end of that very year the king was attended by all his nobility at Sarum, where all the principal landholders submitted their lands to the yoke of military tenure, became the king's vassals, and did homage and fealty to his person.—*Sir W. Blackstone, Commentaries.*

Doméstical. *adj.* Same as Domestic.

Such they were, who might presume t'have done
Much for the king and honour of the state;

Both foreign and *domestical* of late. *Daniel.*

Domestical evils, for that we think we can master them at all times, are often permitted to run on forward, till it be too late to recall them.—*Hooker, Ecclesiastical Polity*, dedication.

The necessities of man had at the first no other helps and supplies than *domestical*; such as that which the prophet implyeth, saying, Can a mother forget her child?—*Ibid.*

In this their *domestical* celebration of the Passover, they divided supper into two courses.—*Ibid.*

Doméstically. *adv.* In a domestic manner; relatively to the domestic character or affairs; privately; not openly.

Is it not a miracle, that so many of your priests, Ignatians, and monks feeding here in England daintily, arrayed gallantly, lodging softly, should be very *domestically* and privily conversant with ladies, dames, matrons, maids of all sorts, and yet none of all these be scorched?—*Sheldon, Miracles of Antichrist*, p. 135: 1616.

He was glad . . . to return to Sheene, where he lived *domestically* as usual, till the death of Sir W. Temple.—*Lord Orrery, On Swift*, let. 2.

Domesticity. *s.* Domestic character.

A judge may be recused on the score of great familiarity and an intimate acquaintance or friendship with the adverse party; for a moderate familiarity and acquaintance is not sufficient hereunto; and great familiarity is included under the notion of friendship and *domesticity*, as living together in the same house, and the like.—*Ayliffe, Parergon Juris Canonici.* (Ord MS.)

It is the *domesticity* of croquêt which makes it so acceptable.—*Saturday Review*, Sept. 3, 1864.

Dómical. *adj.* Having the character of a dome. *Rare.*

At Fontenay, near Caen, a remarkable chambered tumulus was excavated in 1829, which corresponds with one type of those in our south-western counties. It contained ten *domical* chambers, arranged in pairs opposite to each other, and formed of horizontal dry-walling. They had a diameter and height of from ten to fifteen feet.—*Dr. Thurnam, On the two principal Forms of ancient British and Gaulish Skulls, Memoirs, &c. Anthropological Society*, vol. i.

Dómicile. *s.* House; place where a person has his home.

This famous *domicile* was brought with these appurtenances in one night from Nazareth over seas and lands by mighty angels; and can, if honoured with a visit, with an offering, or with a vow, cure in a moment all diseases.—*Brevint, Saul and Samuel at Endor*, p. 303.

The choice of the situation for this *domicile*, the art of making it convenient, of hiding its entrance, and securing it against more powerful animals, are all so many marks of superior skill and industry.—*Goldsmith, Animated Nature*, ii. 319. (Ord MS.)

Domicile [is] the place where a man has his home. Personal property follows the person of the owner, and, on his decease, must be distributed according to the law of the country in which he was domiciled at the time of his death, and not according to the law of the country where such property is situate. The residence of a party for forty days constitutes a *domicile* as to jurisdiction in Scotland.—*Tomline, Law Dictionary.* (Granger.)

Dómicile. *v. a.* Connect anyone with a country by residence.

That wonderful people the Normans . . . had their kingdoms on the Mediterranean, and on either side of the British Channel. In the south they had become southerns. . . . In the north, on the other hand, as by adopting and *domiciling* men of Roman or Italian cultivation, they had braced the intellect of the degenerate church to young energy, and had trained learned churchmen and theologians, Lanfranes and Anselms; so taking the form, the structure, the architectural science of universal Latin Christendom, they gave it a grandeur, solidity, massiveness, even height, which might seem intended to confront a ruder element, more wild and tempestuous weather.—*Milman, History of Latin Christianity*, b. xiv. ch. viii.

Dómiciled. *part. adj.* Having an abode.

P. Ryan, an Irishman by birth, but for many years *domiciled* in Denmark, died in London, &c.—*Dr. Phillimore's Reports*, ii. 332.

When Blumenbach pointed out to Cowper that the tadpoles of the Surinam toad (Rana pipa) have tails, this great anatomist was disposed at first to deem the specimen a monstrosity, because he could not comprehend for what purpose these strange beings, so curiously lodged in the *dorsal* cells of their mother, should have the swimming tail of the common tadpole.—*Lawrence, Lectures*, lect. ii. (Ord MS.)

Dóry. *s.* [see last extract; the derivation from *janitore* being the true one.] Fish (Zeus Faber) so called.

Between the floating ribs extends an aponeurosis, the remains or homologue of the primitive fibrous investment of the abdomen in the lancelet and lamprey. In the salmon and *dory* the ribs continue to be attached to some of the parapophyses after they are bent down to form the hæmal canal and spine in the tail; and we derive the same striking evidence of the true nature of these inferior arches from the skeleton of the tunny, the *dory*, and some other fishes.—*Owen, Lectures on Comparative Anatomy*, lect. iii.

The *dory* or *doree* contends with the haddock for the honour of bearing the marks of St. Peter's fingers, each being supposed to have been the fish out of whose mouth the apostle took the tribute money; leaving on its sides, in proof of its identity, the marks of his finger and thumb. Another origin for the spots on the side of the *dory* has also been assigned. St. Christopher, in wading through an arm of the sea, bearing our Saviour, whence his name Christophorus, is reported to have caught a *dory*, and to have left those impressions on his sides to be transmitted to all posterity as an eternal memorial of the fact. The name of *doree* was therefore said to have been derived from the French *adorée*, 'worshipped.' Our common appellation is also said to be of foreign origin, and even with a second reference to St. Peter. The fishermen of the Adriatic call this fish *il janitore*, 'the gatekeeper,' in allusion to the supposed keys of the gates of heaven, of which the apostle is pictured to be the bearer; and in several countries of Europe the *dory* is called St. Peter's fish. The real origin of the English name for this fish may be questioned; but it is probably derived from the French *dorée*, or *jaune dorée*, in reference to its peculiar golden colour. At what time the epithet John became prefixed to the simple name of this fish, it might be difficult to ascertain; its name of *doree* is at least as old as Merrett, who in his Pinax Rerum Naturalium Britannicarum, 1666, speaks of it as a *doree* or a *dory*.—*Yarrell, British Fishes.*

Dose. *s.* [Fr.; Gr. δόσις = giving, or thing or quantity given.]

No plea was to be admitted to release from imprisonment; not the duty of the husband to the young wife, of the young wife to her husband; not that of the parents for the care of their children, nor of children for the care of their parents; infirmity, age, *dotage*, nothing excused, nothing mitigated the sentence.—*Milman, History of Latin Christianity*, b. xi. ch. i.

2. Fish so called. See extract.

The gemmeous *dragonet* (Callionymus lyra), so called from its brilliant gemlike colours, was first described as a British fish by Dr. Tyson; . . . the second term, that of *dragonet,* was deduced by Pennant from the trivial name attached to the second species, *dracunculus;* that name, in its turn, having probably been given, with a double reference to its speckled appearance, and also to the large winglike ventral and pectoral fins which induced Belon, Seba, and others, to consider these species as allied to the flying fishes. When examining books to obtain local and provincial names for the various fishes to be included in this work, I find that I made the mistake of transferring the name of Goudie to the Great Weever, instead of to the gemmeous *dragonet.* The prevailing colour of this last-named fish is a golden yellow; it is called the Yellow Skulpen in Cornwall. The Sordid *Dragonet* is so called probably from the dingy hue of its colours as compared with those of its generic companion.—*Yarrell, British Fishes.*

Drágonfly. *s.* Large native neuropterous insect of the genus Æshna.

The body of the cantharides is bright coloured; and it may be, that the delicate coloured *dragonflies* may have likewise some corrosive quality.—*Bacon, Natural and Experimental History.*

Of the neuroptera, some of the *dragon-flies* are pre-eminently beautiful; one species, with rich brown-coloured spots upon its gauzy wings, is to be seen near every pool. Another, which dances above the mountain streams in Oovah, and amongst the hills descending towards Kandy, gleams in the sun as if each of its green enamelled wings had been sliced from an emerald.—*Sir J. E. Tennent, Ceylon,* pt. ii. ch. vi.

Dragonsblood is a resin, so named as to seem to have been imagined an animal production.—*Sir J. Hill.*

Take *dragonsblood,* beat it in a mortar, and put in a cloth with aqua vitæ, and strain them toget—*Peacham.*

Dragon's blood is a resinous substance which comes to us in small balls of the size of a pigeon's egg, sometimes in rods like the finger, sometimes irregular cakes. . . . *Dragon's-blood* is chiefly used for tingeing spirit and turpentine varnishes, for preparing gold lacquer, for tooth tinctures and powders, for staining marble, &c.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

The natural secretion of the fruit of the Calamus Draco constitutes the best djurnang or *dragon's blood,* a dark-coloured, inodorous, insipid resin; a second and inferior kind is produced from the fruit from which the natural secretion has been removed by heat, and bruising; the third and most inferior kind appears to be the refuse of the last process. It is doubtful whether this article is procured from the plant by incisions as has been supposed. . . . Resinous matters have been yielded in abundance by some species [of Liliaceæ]. . . . Of these the most celebrated is *dragon's blood,* a tonic, astringent resin, sometimes employed in diarrhœa and passive hæmorrhages: it is yielded in part by the Dracæna Draco from the surface of the leaves, and from the cracks in its trunk; this, however, is scarcely known to modern druggists, who sell the astringent resin of Pterocarpus. . . . The Dalbergia monetaria of Linnæus yields a resin very similar to *dragon's blood.*—*Lindley, Vegetable Kingdom, Palmaceæ, Liliaceæ, and Fabaceæ.*

Drágontree. *s.* Tree producing the Dragonsblood.

Two or three hundred years are estimated to form the extreme length of life in a date palm and many others. But when, as in the *dragon-trees,* the degree to which the stem will grow in diameter is indefinite, the age seems, as in exogens, to be indefinite also. Thus a famous specimen of the Dracæna Draco, of Orotava, in Teneriffe, was an object of great antiquity so long ago as A.D. 1402, and is still alive.—*Lindley, Vegetable Kingdom,* p. 99.

Dragoón. *s.* Soldier so called, originally mounted on horseback and armed with a *dragon* [Fr.] or kind of carbine.
